Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	03-31-2015
Citation:	HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Description:	Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 08/02/2017. OBSERVATION: A business plan has not been received by the CUPA. The facility was previously sent a notice/request from the CUPA for the submittal of a business plan. CORRECTIVE ACTION: Submit the business plan electronically in the California Environmental Reporting System (CERS) and implement immediately.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Site ID:	96305

Citation:	22 CCR 23 66273.40(a)(3) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.40(a)(3)
Violation Description:	Failure of the universal waste handler who sends electronic devices, CRTs, and/or CRT glass to any foreign destination to complete the following: (1) Notify the Department 60 days prior to the intended export before any electronic devices, CRTs, and/or CRT glass are scheduled to leave the United States and cover all export activities extending over the next twelve (12) month or lesser period; (2) Concurrently send a copy of the notification required pursuant to subsection of this section, to the CUPA having jurisdiction over the universal waste handlerG s facility.
Violation Notes:	Returned to compliance on 08/02/2017. OBSERVATION: Copies of hazardous waste disposal records for waste solvent were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA by April 30, 2015.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

City,State,Zip: EL MONTE, CA 91733
Site ID: 14239
CERS ID: 10447408
CERS Description: Hazardous Waste Generator

Violations:

Site ID: 14239
Site Name: Buy Low Market
Violation Date: 10-19-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 08/29/2019. OBSERVATION: Five storage bins of waste consumer products located in the loading area were observed with an accumulation start date of August 2015 and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of waste consumer products waste consumer products (Flammable, Poison, Alkaline, Oxidizer, and Acid) and submit a copy of the manifest/receipt to the CUPA.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 14239
Site Name: Buy Low Market
Violation Date: 07-17-2020
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: OBSERVATION: The business failed to establish and implement a business plan when handling hazardous materials at or above the reportable threshold quantities. CORRECTIVE ACTION: Establish and implement a business plan for the facility. Submit documentation of correction to the unified program agency. Please contact Health Haz Mat at 323-890-4000 for assistance to complete CERS submittal.

Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 03/16/2020. OBSERVATION: The business failed

PV MART INC (Continued) **S107136980**

to electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. CERS submittal for Inventory not accepted. Submittal was Not Accepted on 8/5/2019 by VERONICA RIVERA for Los Angeles County Fire Department Comments by regulator: 1. Your hazardous materials inventory was not accepted in CERS based on failure to check the applicable new Federal Hazard Categories (24) on your reported chemical(s). For Instructions Copy and Paste link https://www.fire.lacounty.gov/wp-content/uploads/2018/05/New-Fed-Catagories-eff-Dec-28-2017-update-2.pdf Please review the Warning Signs, and or Required Fields, update as necessary, and resubmit. 2. Please correct the physical state for the chemical "Chlorodifluoromethane" to read as a solid and not liquid. If you have any questions, please call Data Operations Unit at (323)890-4000. Submittal was Not Accepted on 8/5/2019 by [Truncated]

File Location: Archived
Potential Media Affected: Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern: Acetone, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium, Copper, Lead, Benzene, Xylene
Site History: The facility was a steel drum reconditioning plant. The plant received, cleaned, repaired, and painted metal drums. Drums were stored on dirt lot prior to be reconditioned and cleaned. Inside the plant, southeast portion, a pit collected residues from the drums. The plant had a concrete floor and spills were noticed everywhere according to a inspection on July 2, 1987. A blast furnace was located at the facility where drums were cooked followed by sandblasting and painting. The facility contained a large aboveground

FORMER COOPER DRUM CO. FACILITY, SUB-AREA 3A (Continued) **S106765211**

tank located in a concrete containment structure. The facility had numerous subsurface concrete filled vaults which appeared to have been used for storing old machinery. Cooper Drum began operations on June 30, 1983.

Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation Action Summary:
Evaluation Date: 1993-08-10 00:00:00.0
Evaluation Responsible Agency: State Contractor/Grantee
Found Violation: No
Evaluation Type Description: COMPLIANCE EVALUATION INSPECTION ON-SITE
Evaluation Responsible Person Identifier: R9
Evaluation Responsible Sub-Organization: Not reported
Actual Return to Compliance Date: Not reported
Scheduled Compliance Date: Not reported
Date of Request: Not reported
Date Response Received: Not reported
Request Agency: Not reported
Former Citation: Not reported

ENVIROSTOR:
Name: MICRO GAGE, INC.
Address: 9537 TELSTAR AVENUE
City,State,Zip: EL MONTE, CA 91731
Facility ID: 71002529
Status: Refer: Other Agency
Status Date: Not reported
Site Code: Not reported

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	01-27-2016
Citation:	HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description:	Failure to annually review and electronically certify that the business plan is complete, accurate, and up-to-date.
Violation Notes:	Returned to compliance on 08/11/2016. OBSERVATION: This facility has not annually reviewed and certified that the business plan is complete, accurate, and up-to-date. A review of CERS, revealed that the last submittal of HMBP was done on 02/14/2014. The due date for the annual submittal for the HMBP to CERS was 04/01/2015. CORRECTIVE ACTION: Go to CERS internet website (http://cers.calepa.ca.gov/) and provide updates to your Hazardous Materials Business Plan - (Business Activities, Business Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan, & Employee training plan). If you need assistance, contact the Los Angeles County Fire Department Data Operations section at 323-890-4000

Violation Date:	01-27-2016
Citation:	22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric current; and, 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external

MICRO GAGE INC (Continued) **1000365891**

corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or f

Violation Notes: Returned to compliance on 04/07/2016. OBSERVATION: The Owner/Operator failed to obtain a certified Hazardous Waste tank system integrity assessment for the treatment tank. CORRECTIVE ACTION: Immediately obtain a certified Hazardous Waste tank integrity assessment that includes all of the required information in this section. Provide a copy of the certified Hazardous Waste tank system assessment to the CUPA and maintain a copy at the facility. The Owner/Operator shall obtain and keep on file at the facility a written assessment reviewed and certified by an independent, qualified, professional engineer, registered in California. The assessment shall be valid for a maximum period of five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less.

Violation Date: 01-27-2016
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

MICRO GAGE INC (Continued) **1000365891**

Violation Notes:	Returned to compliance on 08/11/2016. OBSERVATION: The owner/operator failed to electronically submit the Tiered Permitting section to the statewide information management system, CERS (California Environmental Reporting System). Based on the Onsite Hazardous Waste Treatment Notification form received by this office on August 13, 2008 (attachment), Micro Gage Inc. indicated that it had one Conditionally Authorized (CA) Unit. CORRECTIVE ACTION: Go to the CERS internet website (http://cers.calepa.ca.gov/) to complete and submit the all required sections that pertain to the CA permit.

Violation Description:	Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.
Violation Notes:	Returned to compliance on 04/01/2016. OBSERVATION: Metal concentration in rinse waste water is not known. CORRECTIVE ACTION: Conduct a hazardous waste determination on the rinse water collection tank that collects the solutions from the bench top sinks. Have a California certified laboratory to perform a Total Threshold Limit Concentration (TTLC) and Soluble Threshold Limit Concentration (STLC)(if required) analysis and a fluoride salts test for the collection tank. The sample must be taken prior to any treatment (NaOH) being added to the tank.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D005
Waste Description: BARIUM

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: D040
Waste Description: TRICHLORETHYLENE

SARGENT FLETCHER INC (Continued) **1000233728**

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: F019
Waste Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Waste Code: U080
Waste Description: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021

Next Scheduled EDR Contact: 10/11/2021
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 02/22/2021

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/22/2021

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 03/15/2021

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2019

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association’s annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.
Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics’ primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.
Private Schools

UTM Y (Meters):	3768942.8
Elevation:	241 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630799 EL MONTE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

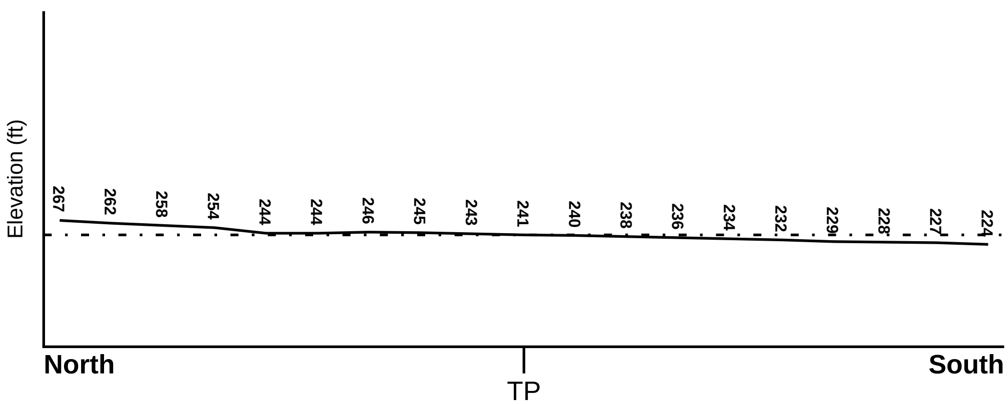
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

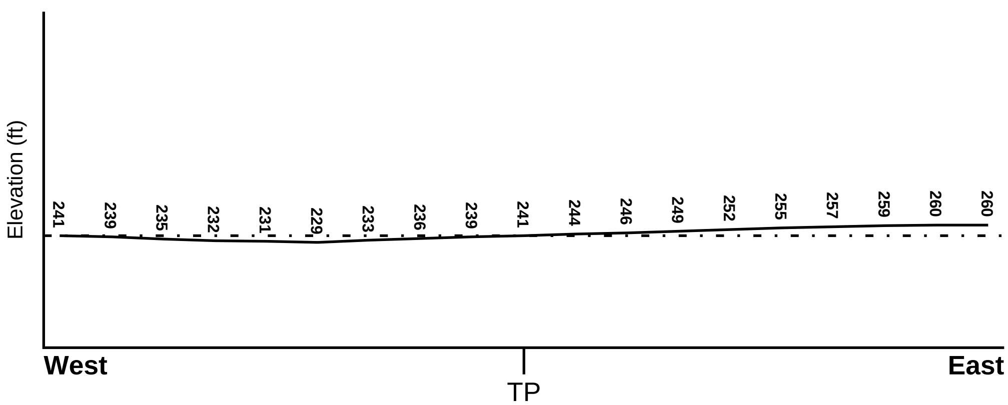
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION



Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 241 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1665F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1675F	FEMA FIRM Flood data
06037C1670F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
EL MONTE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types: fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types: stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.’s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

BUILDING PERMIT APPLICATION

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractor's License Law for the following reason (SEC. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to provisions of the Contractors License Law (Chapter 9 (commencing with Sec. 7000) of Div. 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.).

☐ I as owner of the property, or my employees with wages as their sole compensation will do the work, and the structure is not intended or offered for sale (Sec 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.)

☐ I, as owner of the property, am exclusively contracting with a licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who

☐ I am exempt under Section ______________ B.&P.C. for this reason

Signature of Applicant or Agent ______ Date ______

LICENSED CONTRACTORS DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provision of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Signature of Applicant or Agent ______ Date ______

WORKERS' COMPENSATION DECLARATION

I hereby affirm under penalty of perjury one of the following declarations:

☒ I have and will maintain a certificate of consent of self-insure for workers' compensation as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: state national services

Policy No.: 5413531

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provision of Sec. 3700 of the Labor Code, I shall forthwith comply with those provisions.

Signature of Applicant or Agent ______ Date ______

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UN-LAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name ______

Lender's Address ______

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

DESCRIBE COMPLETELY THE INTENDED USE OF ALL SPACE APPLICABLE TO THIS BUILDING PERMIT:

The following statement must be signed by the Building owner.

(When approved by the Building Official, the owner's agent may sign for permits other than the initial or shell building permit.)

Will the applicant of future building occupant handle a hazardous material or mixture containing a hazardous material equal to or greater than the amounts specified on the hazardous materials information guide?

☐ YES ☐ NO

If the answer to the question was yes, will the proposed building or modified facility be within 1000 feet of the outer boundary of a school?

☐ YES ☐ NO

Will the intended use of the building by the applicant or future building occupant require a permit for construction or modification from the South Coast Air Quality Management District (SCAQMD)? (See permitting checklist for guidelines.)

☐ YES ☐ NO

I have read the hazardous material information guide and the SCAQMD permitting checklist. I understand my requirement under the State of California Health and Safety Code Section 25505,25533, and 25534 concerning hazardous materials reporting.

☐ OWNER ☐ AGENT

E-1907

LEACHING SYSTEM: The disposal of the effluent from the septic tank shall be made into a subsurface leaching field having a minimum of 600 sq. ft. of effective leaching area. Two tile leaching lines, each approximately 100 ft. long, 3 ft. wide and 4ft deep, shall be supplemented by the addition of three (3) bucket holes to each trench, at approximately 35 ft. 70 ft. and 100 ft. from the septic tank. Bucket holes to be approximately 30" in diameter and 6 ft. below trench bottom, backfilled with 2" rock.

Eighteen inches (18") of rock to be placed under the tile and a minimum of 2" of gravel over the tile. Field tile used in disposal trenches shall be not less than 4" in diameter and laid with 1/2" open joints. All open joints shall be protected on top by treated roofing paper 10" long and 4" to 6" wide. Filter material to be rock or gravel 3/4" to 2" in size. Grade boards shall be provided for all lines upon which to lay the tile. A piece of untreated building paper shall be placed over the filter material of all disposal trenches to protect the filter material until the backfill settles.

DISTRIBUTION BOX: When more than one leaching trench is required, the effluent from the septic tank shall be evenly divided by means of a distribution box. The inlet to the distribution box shall be at least one inch above the outlet level. Even distribution of the effluent within the distribution box shall be made by means of a properly located baffle.

All plumbing and sewage disposal systems shall be installed in compliance with the Los Angeles County Building Department ordinances.

NOTE: If the builder proposes to separate the wastes in two or more sewage disposal systems, the combined total gallonage of septic tanks and square footage of trench bottom shall be equal to the above recommendations and the plumbing fixtures divided equally into the separate systems.

Very truly yours,

OFFICE OF COUNTY HEALTH DEPARTMENT

February 1, 1950

File 2540 N Rosemead

Department of Building & Safety
County of Los Angeles
1126 East Las Tunas
Temple City, Calif..

Gentlemen:

Subject: Sewage disposal system for drive-in-theatre at 1053 Chico Avenue, El Monte, California. Architect: J.Arthur Drielsma, 1914 S.Vermont Avenue, Los Angeles 7, California.

The Los Angeles County Health Department recommends that septic tanks with the effluent discharging into loose joint tile leaching lines be used as the method of sewage disposal for the drive-in-theatre at 1053 Chico Avenue, El Monte. The plumbing fixtures for this theatre will consist of 13 toilets; 6 lavatories; one 12ft. trough urinal; one 2-compartment sink and one slop sink.

<u>SEPTIC TANK:</u> All the plumbing fixtures shall be connected to a septic tank of 3000 gallons minimum liquid capacity.

For efficient septic tank performance, the following dimensions are recommended by the United States Public Health Service, and concurred in by the Los Angeles County Health Department.

Width 6 ft. Length 13½ ft. Liquid depth 5 ft. Total depth 6 ft. 3 in.

The above recommendation does not prohibit the use of septic tanks of other dimensions or of prefabricated septic tanks having the required liquid capacity that conform to the uniform plumbing code as amended and approved by the Los Angeles County Health Department.

Two Compartments: Inlet compartment to be 2/3 of total capacity. Partition shall have a 4" slot approximately full width of the tank located at a point midway in the depth of the liquid. The partition shall extend no less than 6" above liquid level and not closer than 2" from top of tank.

Two manholes to be provided, one over inlet and the other over outlet or make the top in sections which can be removed.

Septic tanks receiving heavy usage require yearly inspection and when necessary the accumulated sludge should be pumped out.

Project Title ____________________

Documentation Author/Firm ____________ Date ________

For Enforcement Agency Use Only

Plan Checked By ____________ Date ________

This Checklist is applicable to both First and Second Generation Nonresidential Standards Compliance.

Reference in Construction Documents

Envelope Measures

- [ ] Certified insulation materials per 2-5311(a) . . . . ________
- [ ] Insulation installed to meet flame spread and smoke density requirements of 2-5311(b) . . . . ________
- [ ] Urea formaldehyde foam insulation is installed per 2-5311(c) . . . . ________
- [ ] Retrofit insulation specified as per 2-5313 . . . . ________
- [ ] Air infiltration is minimized by specification of tested manufactured doors and windows, proper sealing and caulking of joints and openings in exterior walls, and weatherstripping as per Section 2-5317 . . . . . . ________

Lighting System Measures

- [ ] Certified luminaires/ballasts per 2-5314(b) . . . . ________
- [ ] Independent control w/ enclosed areas per 2-5319(a) . . ________
- [ ] Manual switching readily accessible per 2-5319(b) . . . . ________
- [ ] Reduction of lighting load to at least one half per 2-5319(c). Occupancy sensors or programmable timers meeting CEC criteria may substitute . . . . ________
- [ ] Separate switching of daylit areas per 2-5319(d) . . . . ________
- [ ] Separate switching of display and valance lighting in retail and wholesale stores per 2-5319(h) . . . . ________
- [ ] Automatic control of display lighting in retail and wholesale stores per 2-5319(h) . . . . ________
- [ ] Tandem wiring of one- and three-lamp luminaires per 2-5319(l). . . . . ________

Daylighting and Lumen Maintenance Controls (when applicable)

- [ ] Uniformly illumination reduction to one-half per 2-5319(e)1 . . . . ________
- [ ] Flicker free operation and no premature lamp failure per 2-5319(e)2 . . . . ________
- [ ] Time delays to prevent undesirable cycling per 2-5319(e)3 . . . . ________
- [ ] Step switching devices with separation between on/off settings per 2-5319(e)4 . . . . ________
- [ ] Photocell sensors with a diffusing cover and no opaque cover per 2-5319(e)5 . . . . ________
- [ ] Manufacturer's instructions provided for installation and calibration per 2-5319(e)6 . . . . ________
- [ ] Proper installation of controls including sensor location, certification of initial calibration and control of luminaires only within daylit area per 2-5319(e)8 . . . . ________
- [ ] Visible or audible malfunction alarms per 2-5319(g) . . . ________

Occupancy Sensing Devices (when applicable)

- [ ] Visible or audible malfunction alarms per 2-5319(g) . . . ________
- [ ] Limits on emissions per exceptions to 2-5319(e) . . . . ________

HVAC and Plumbing System Measures

- [ ] Piping insulated as required by 2-5312 . . . . ________
- [ ] Certified HVAC equipment per 2-5314(a) . . . . ________
- [ ] Certified plumbing equipment per 2-5314(a) . . . . . . ________
- [ ] Heating and cooling equipment efficiency per 2-5314(b) . ________
- [ ] Pilotless ignition of gas appliances per 2-5314(c) . . . . ________
- [ ] Automatic controls for off-hours per 2-5315(a)1 . . . . . ________
- [ ] Thermostat set point requirements per 2-5315(a) . . . . ________
- [ ] Sequential control of heating and cooling per 2-5315(a)3 ________
- [ ] Automatic exhaust fan dampers per 2-5316(b) . . . . . ________
- [ ] Thermostat controls for each zone per 2-5315(b) . . . . ________
- [ ] Ventilation provided per 2-5316 and 2-5343 . . . . . . ________
- [ ] Ventilation and recirculation air quantity information provided per 1403(b)3 . . . . ________
- [ ] Heaters for domestic hot water and/or pools per 2-5318 . ________

BUILDING PERMIT APPLICATION

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractor's License Law for the following reason (SEC. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to provisions of the Contractors License Law (Chapter 9 (commencing with Sec. 7000) of Div. 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500.).

☐ I as owner of the property, or my employees with wages as their sole compensation will do the work, and the structure is not intended or offered for sale (Sec 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with a licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who

☐ I am exempt under Section____________B.&P.C. for this reason

Signature of Applicant or Agent ____ Date ____

LICENSED CONTRACTORS DECLARATION

I hereby affirm under penalty of perjury that I am licensed under provision of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Signature of Applicant or Agent Date

WORKERS' COMPENSATION DECLARATION

I hereby affirm under penalty of perjury one of the following declarations:

☐ I have and will maintain a certificate of consent of self-insure for workers' compensation as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

☒ I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: STATE FUND

Policy No. 229-96 UNIT 0008576

☐ I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provision of Sec. 3700 of the Labor Code, I shall forthwith comply with those provisions.

[signature] 4-16-96

Signature of Applicant or Agent Date

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UN-LAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name ____

Lender's Address ____

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this City to enter upon the above-mentioned property for inspection purposes.

Public Records Request

Government Code §6250 et seq.

In order to accurately process your request to inspect or provide copies of public records maintained by the City, please complete the below. In accordance with government code section 6253(c), allow 10 days from receipt of your request to determine whether the request, in whole or in part, seeks copies of disclosable public records in the possession of the City, we will notify you of the determination within the allowable time.

(REQUESTOR INFORMATION – PLEASE PRINT)

1. Name: Deborah Hernandez
2. Address: 735 E. Carnegie Drive. San Bernardino CA 92408
3. Phone / Cell Number: 909-289-8533
4. Email Address: debbie.hernandez@stantec.com

(RECORD(S) INFORMATION – BE AS SPECIFIC AS POSSIBLE)

5. Address of Record(s) Requested: 2540 Rosemead Boulevard South El Monte, CA 91733
6. Description of Record(s) Requested (Include document titles and approximate dates, if possible):
   I am conducting an environmental assessment and would like to request any available records (i.e. inspection records, notices of violation, hazardous materials permits/business plans, groundwater monitoring reports, underground storage tank permits, etc)

   (use reverse side for additional description)

7. How would you like to receive documents, if any? Digital (email)

Date received request: (date stamp)

Copies (#): ____________________

Charge: $______________________ (where applicable)

Pursuant to Govt. Code Sect. 6257, the City may require a deposit to cover the estimated charge if copies are requested. The deposit will be refunded if requested records do not exist, are exempt, or are otherwise unavailable. Charge per copy is $1.00 first page, $.10 cents each additional page

Date completed: ________________

Table of Contents

1. INTRODUCTION

The proposed development, VTTM 083399, is located at 2540 Rosemead Boulevard, South El Monte, CA, 91733. The 13.45 Ac site is bound by Rosemead Blvd. to the west, commercial and residential buildings to the north, Chico Ave. to the east, and commercial buildings to the south. Proposed construction includes approximately 207 detached and attached condominiums, and single commercial parcel. The general area is shown in Figure 1. Greater detail is available in Figures 2 and 3, in the back of this report.

The purpose of this report is to outline the preliminary hydrology and low impact development methods that will be used during final engineering and are not intended to represent a complete and final design.

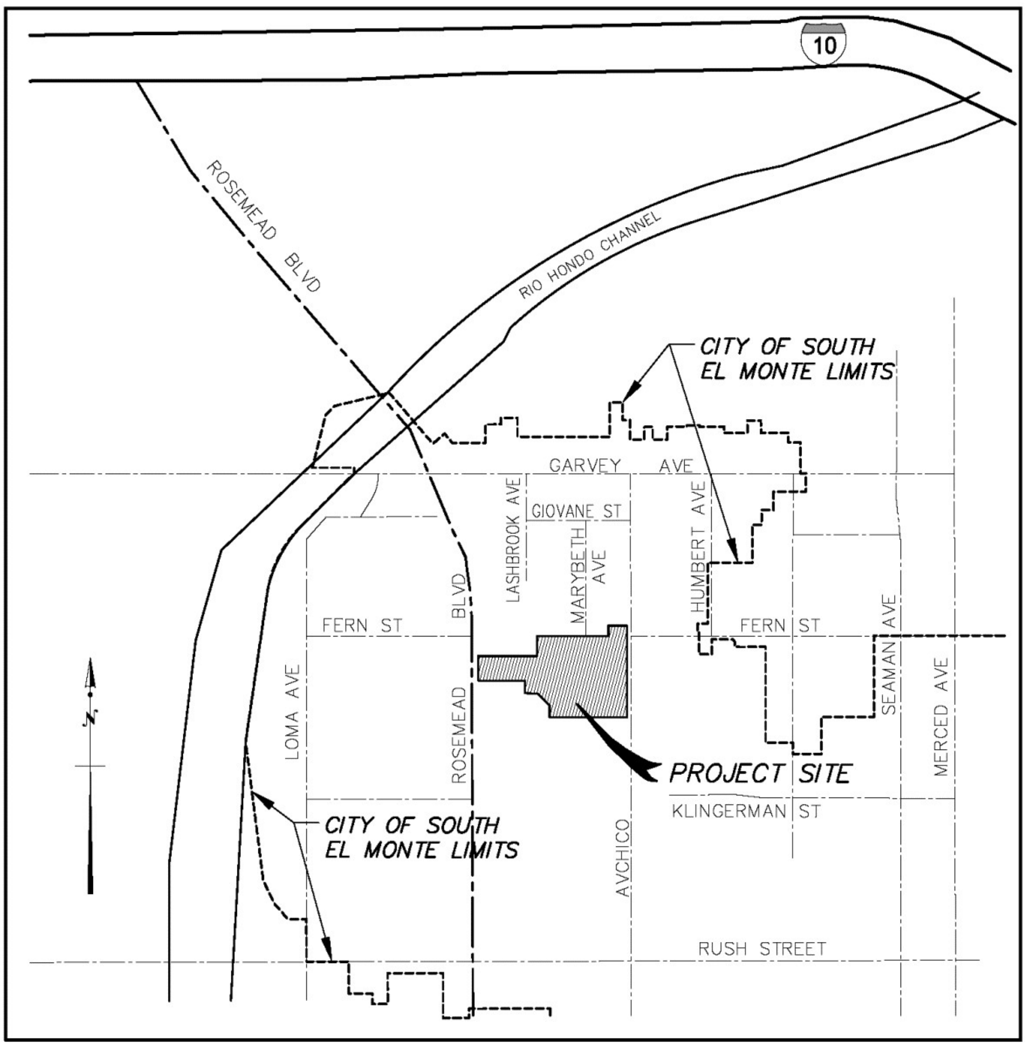

Figure 1. Vicinity map.

2. HYDROLOGY

2.1 Methodology

The hydrology analysis for this project is based on the Los Angeles County Department of Public Works Modified Rational Method and is in accordance with the 2006 Hydrology Manual. Runoff calculations are performed using the LADPW HydroCalc Program.

As determined from the Los Angeles County Hydrology Manual, the 50-year, 24-hour rainfall depth for the site is 6.1-inch; the project is located within soil type 003. A copy of the 50-year, 24-hr rain event Isohyet Map is located in Appendix G of this report.

AutoCAD Civil 3D software was utilized to establish subarea boundaries and uniform imperviousness.

2.2 Predeveloped Site Drainage Condition

The existing site consists almost entirely of paved surfaces and several existing storm drain inlets that discharge to County owned systems; a portion along the easterly property line surface drains to Chico Avenue. The existing drainage conditions are represented on Figure 2 in Appendix G of this report. Existing survey of the area shows current drainage conditions; however, design of the proposed development is based on the County's drainage map and allowable discharge into County systems. Existing drainage areas from the survey shown on Figure 2 are for reference only.

The response to an information request for allowable Q in July 2020 to the Los Angeles County Department of Public Works for discharge into the County drains provided a drainage map that roughly defines the pre-developed onsite drainage condition and is the basis of analysis. A copy of the allowable Q request response letter and reference material provided by the County, including county drainage maps, is located in Appendix C of this report.

The County drainage map shows approximately 87% of the 13.45 Ac. site , known as subarea A, drains from east to west to a sump catch basin located near the middle of the site. The remaining 13% of the site drains east to west towards Rosemead Blvd. known as subarea B.

Subarea A defines the easterly portion of the site draining toward the onsite sump catch basin; on paved surfaces and discharges to Los Angeles County Flood Control District, Project No. 7750, Line A. The 10-yr hydrology map exhibit provided as part of the County's responses, places subarea A, within "Subarea No. 2", with an allowable discharge Q to Line A of 1.90 cfs/Ac.

Subarea B defining the remaining westerly portion of the site drains toward Rosemead Blvd.; on paved surfaces and discharges to two existing CMP inlets connecting to the Los Angeles County Municipal Transfer Drain (MTD) 138. The allowable discharge Q to MTD138 is 1.00 cfs/Ac.

Existing walls and barriers along the property line prevents water runon.

2.3 Developed Site Drainage Condition

In the developed condition, the drainage pattern remains genearally the same as the predeveloped condition. Subarea A in the developed condition is defined by Lot 1 and consists of residential condominiums. Subarea B in the developed condition is defined by Lot 2 and consists of a single commercial parcel to be rough graded.

Storm water from the Subarea A is collected by a private underground storm drain system and discharges to Line A onsite via a new junction structure. Storm water from the Subarea B surface flows via graded swale at 1% to the existing CMP inlet that discharges to MTD 138 in Rosemead Blvd. Table 2 defines the developed Q discharging to the county storm drains Project No. 7750, Line A and MTD 138.

2.4 Results

Tables 1A, 1B, and 1C summarizes how the developed condition runoff flowrates are less than the allowable flowrates for the 50-year storm event. The Stormwater Quality Design Flowrate, Q_{PM}, is used for LID design. HydroCalc Reports are located in Appendix B of this report.

Table 2A. Developed Runoff Volume Results.

2.5 Flood Hazards

According to the Federal Emergency Management Administration (FEMA) flood zone maps, the project site is located within Zone X, an area of minimum flood risk, or 0.2% chance annually. A copy of the FEMA Firm map is located in Appendix G. An existing flood control storm drain is present onsite that has the potential cause localized flooding onsite. To protect building pads from potential flooding, building pads are located 1ft minimum above the Rosemead Blvd street right of way.

3. LOW IMPACT DEVELOPMENT

3.1 Introduction

The proposed project will treat the runoff from the site in accordance with the Los Angeles County Low Impact Development Manual, 2014. To do so, the runoff resulting from the greater of the first 0.75-inch of rainfall or the 85th percentile rain event is treated prior to leaving the site. As determined from the Los Angeles County Hydrology GIS Maps, the 85-percentile rain event for the project site site is 0.90 inches, which is used as the design storm for Low Impact Development because it is greater than 0.75 inches. Hydrology methodology, water quality design flowrates and volumes are presented in Section 2 of this report.

3.2 Project Category

The proposed development consists of 207 attached condominia, is 13.45 Acres of disturbed area, and adds more than 10,000 square feet of impervious surface area; as such, the project must follow the requirements for Designated Projects.

Category	YES	NO
1. Development [a] of a new project equal to 1 acre or greater of disturbed area and adding more than 10,000 square feet of impervious area [b]	☒	☐
2. Development [a] of a new industrial park with 10,000 square feet or more of surface area [c]	☐	☒
3. Development [a] of a new commercial mall with 10,000 square feet or more surface area [c]	☐	☒
4. Development [a] of a new retail gasoline outlet with 5,000 square feet or more of surface area [c]	☐	☒
5. Development [a] of a new restaurant (SIC 5812) with 5,000 square feet or more of surface area [c]	☐	☒
6. Development [a] of a new parking lot with either 5,000 ft^2 or more of impervious area [b] or with 25 or more parking spaces	☐	☒
7. Development [a] of a new automotive service facility (SIC 5013, 5014, 5511, 5541, 7532-7534 and 7536-7539) with 5,000 square feet or more of surface area [c]	☐	☒
8. Projects located in or directly adjacent to, or discharging directly to a Significant Ecological Area (SEA),[d] where the development will: a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and b. Create 2,500 square feet or more of impervious area [b]	☐	☒
9. Redevelopment [e] of 5,000 square feet or more in one of the categories listed above **If yes, list redevelopment category here:**	☐	☒
10. Redevelopment [e] of 10,000 square feet or more to a Single Family Home, without a change in landuse.	☐	☒

a Development includes any construction or demolition activity, clearing, grading, grubbing, or excavation or any other activity that results in land disturbance.

b Surfaces that do not allow stormwater runoff to percolate into the ground. Typical impervious surfaces include: concrete, asphalt, roofing materials, etc.

c The surface area is the total footprint of an area. Not to include the cumulative area above or below the ground surface.

d An area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and would be disturbed or degraded by human activities and developments. Also, an area designated by the City as approved by the Regional Water Quality Control Board.

e Land-disturbing activities that result in the creation, addition, or replacement of a certain amount of impervious surface area on an already developed site. Redevelopment does not include routine maintenance activities that are conducted to maintain the original line and grade, hydraulic capacity, or original purpose of facility, nor does it include modifications to existing single family structures, or emergency construction activities required to immediately protect public health and safety.

3.3 Hydrology and Drainage Pattern

As described in section 2 of this report, the proposed site is divided into two subareas as illustrated in Figure 3, Developed Condition Hydrology Map, located in Appendix G. Subarea B is to be left rough graded but undeveloped for future commercial space. Therefore, LID is ignored for Subarea B until it is developed. Subarea A is to be developed into residential condominiums, with a central LID BMP. Overflow from the proposed BMP will be directed to County storm drain Project No. 7750, Line A. Water quality design volume (SWQDv) and flow rates (Qpm) resulting from the 85th percentile rain event, as decribed in Section 2, used for sizing of LID BMPs are summarized in Table 3.

Subarea	Area (Ac)	$SWQD_V$ (ft^3)	Q_{PM} (ft^3/s)	Outfall Location
A	12.26	27,807	1.56	Project No. 7750, Line A
B	1.19	N/A	N/A	MTD 138

Table 3. Low Impact Development, Stormwater Quality Design Volume and Flowrates

3.4 Hydromodification

The proposed project is considered exempt from the requirements of the hydromodification for the following reasons:

1) The proposed project site was previously developed in an urbanized area and does not increase the effective impervious area of the site as compared to the pre-project conditions. On the contrary, effective imperviousness of the site will be decreased from 90% to 75% once the site is developed.
2) The project discharges into a LA County Flood Control storm drain and satisfies the allowable discharge flowrates provided by the County.

3.4 Infiltration BMP

3.4.1 Feasibility Screening

Infiltration is the first option in Los Angeles County when screening potentially feasible LID BMPs. Infiltration systems collect storm water runoff and conducts it into permeable soils beneath the site; effectively reducing pollution, reducing runoff and flooding, and recharging ground water. Initial investigations by the soils engineer did not include infiltration testing and recommendations. Calculations of liquefaction potential provided by the soils engineer indicate that there are discrete layers of soils that are susceptible to liquefaction. Further investigation at specific location and design depth is necessary to rule out liquefaction as a potential hazard. However, other hazards such as expansive soils, high ground water, landslides, or polluted soils, were identified during initial explorations that would disallow infiltration onsite.

Due to the lack of testing, an underground infiltration trench has been designed using an estimated infiltration rate of 1.0 inch per hour (in/hr) estimated by the soils engineering based on soil material, which serve as a benchmark to adjust the size of the system. To be technically feasible per the County of Los Angeles Guidelines for Design, Investigation, and Reporting Low Impact Development Stormwater Infiltration, GS200.1. GS200.1, testing must confirm a

minimum corrected infiltration rate of 0.3 in/hr. If an infiltration rate of 0.3 in/hr is not achieved during testing, or other hazards are identified, then the next option for LID BMP screening process is harvest and reuse.

3.4.2 Preliminary Design

Design of the infiltration system is based upon LADPW LID Manual, 2014, RET-4, Dry Well. Setbacks are based upon GS200.1. The dry wells are designed to infiltration between 20'-30' deep as recommend by the soils engineer based on preliminary borings. The dry well system selected is MaxWell Plus, a drywell designed and install by Torrent Resources.

Water that must be retained onsite, SWQDv, is temporarily detained upstream of the drywells. The detention system choosed for the preliminary storage design is a proprietary chamber system, StormTech, by Advanced Drainage Systems, Inc. (ADS). StormTech utilizes HDPE chambers surrounded by open graded gravel and encapsulated in a waterproof membrane to prevent infiltration. The StormTech system incorporates an isolator row that serves as a settling basin for silt and debris and accessible for maintenance which will provide pretreatment for water prior to entering the drywell.

The locations of the proposed detention system and dry wells BMPs are shown on Figure 3, Developed Condition Hydrology Map, located in Appendix G. The detention system is located within open areas of the site, which allow the detention volume to be adjusted once infiltration testing has occurred and required detention volume is adjusted based on infiltration occuring during the rain event. Sizing of the RET-4 Dry Well system is as follows:

Step 1: Determine the SWQDv

From HydroCalc, the SWQDv is the runoff volume resulting from the 85th percentile, 24-hour rain event for Subareas A listed in Table 3 above.

Step 2: Determine the design infiltration rate

Infiltration rate has not been established, as percolation testing has not yet been performed. An approximate preliminary infiltration rate suggested by the soils engineer, RMA GeoScience, based on boring data is 1-2 in/hr between 20'-30' depth. 1.0 in/hr is used as the corrected infiltration rate for preliminary design purposes. Additional Geotechnical investigations must occur prior to final engineering

Step 3: Calculate the bioretention area and number of dry wells

Determine the size of the required infiltration surface by assuming the SWQDv will fill the available void spaces of the gravel storage layer. The maximum depth of stormwater runoff that can be infiltrated within the maximum retention time (96 hrs) is calculated using the following equation:

$$d_{max} = \frac{f_{design}}{12} \times t$$

where:
- d_{max} = Maximum depth of water that can be infiltrated within the maximum retention time (ft),
- f_{design} = Design infiltration rate (in/hr)
- t = Maximum retention time (max 96 hrs) (hr).

A design infiltration rate, 1.0 in/hr, is used for preliminary design. The maximum allowable drawdown time for underground infiltration is 96 hrs. Determine the maximum depth of water that can be infiltrated.

$$d_{max} = \frac{1.0}{12} \times 96$$

$$= 8.0 \text{ ft}$$

Select the dry well depth (dt) such that:

$$d_t \leq \frac{d_{max}}{n_t}$$

where:
- dt= Depth of infiltration trench (ft),
- dmax = Maximum depth of water that can be infiltrated within the maximum retention time (ft),
- n_t = Infiltration trench gravel void ratio.

For this project, all drywells are designed to be filled with gravel with a void ratio of 40% (0.40 Calculate the maximum allowable depth of gravel filled drywell.

$$d_t \leq \frac{8.0}{0.4}$$

$\leq$ 20 ft (soils engineer has identified a 10ft thick layer that may be suitable for infiltration. Each drywell is designed to be 10 ft high per MaxWell Plus drawings locted in Appendix E)

Calculate the infiltration surface area (total surface area of drywells) required:

$$A = \frac{SWQDv}{d_t \times n_t}$$

where:
- A = Surface area of the dry wells (ft^2),
- SWQDv = Stormwater quality design volume (ft^3),
- dt = Depth of dry well fill (ft),
- nt = Dry well fill porosity.

Subarea A SWQDv is 27,807 ft^3. The depth of gravel fill allowed is 20 ft. Calculate the infiltration surface area (total surface area of drywells) required:

$$A_{SUBAREA\ 1} = \frac{27{,}807}{20X0.4}$$

= 3476 ft^2 (640 ft^2 provided, See Appendix D for Drawings by ADS)

Calculate the number of drywells required:

$$N = \frac{A_{SUBAREA}}{A_{DRY\ WELL}}$$

where:
- $A_{SUBAREA}$ = Total surface area of all dry well required (ft^2),
- $A_{DRY\ WELL}$ = Surface area of Stormwater quality design volume (ft^2),
- N = Number of dry wells.

$A_{SUBAREA}$ is 3,476 ft^2. Each preliminary drywell is 10 ft deep min, and 6 ft in diameter, which results in $A_{DRY\ WELL}$ of 188 ft^2. The number of drywells required:

$$N = \frac{3{,}476}{188}$$

= 18.49 (say 19 drywells, provides 3,572 ft^2 of biofiltration area, and

Dry Well BMP Design Summary

StormTech details generated by ADS includes the detention volume, area, and layout of the system, see Appendix D according the criteria above. The BMP sizing is summarized in Table 5.

Subarea	BMP	BMP Area Required (ft^2)	BMP Area Provided (ft^2)	BMP Volume Required, V_{85th} (SWQDv) (ft^3)	BMP Volume Provided (ft^3)
A	MaxWell Plus Drywell (RET-4)	3,476	3,572	27,807	28,067

Table 4A. Low Impact Development Dry Well BMP Design Summary

3.5 Harvest and Reuse Feasibility Screening

Harvest and reuse systems collect and temporarily store storm water runoff for future use. The most common method of reuse is for landscape irrigation. County guidelines dictate that water must be used within 96 hours following the rain event. The wet-season irrigation demand in the 4 days following a rain event is approximately zero and insufficient to drawdown the captured rainwater. If the detention system is not emptied prior to the next rain event, than runoff from the subsequent storms will bypass the system and not be treated. For this reason, harvest and reuse systems alone are not feasible in the County of Los Angeles. Therefore, harvest and reuse is considered infeasible as a stand-alone LID BMP for the proposed project. The next option in the LID Feasibility screening process is biofiltration.

3.6 Biofiltration BMP

3.6.1 Feasibility Screening

If infiltration is determined to be infeasible during final engineering, and harvest and reuse cannot treat the stormwater in sufficient amount of time, a biofiltration system is proposed.

Reuse of stormwater within 96 hrs after a rain event is infeasible per section 3.5. The detention system used for infiltration will be used to detain the Biofiltration Volume, Vb in excess of the volume not treated during the rain even. A small pump will operate as the detention system begins filling to empty the system slowly over 96 hours in preparation for the next rain event into a biofiltration planter. The biofiltration planter will remove pollutants from the runoff, and clean water will be discharged to Los Angeles Couty Storm Drain Project No. 7750, Line A. In this way, the system satisfies the requirement to treat 1.5xSWQDv from the 85th percentile rain event.

3.6.2 Preliminary Design

To satisfy the requirements of the County of Los Angeles Department of Public Works *Low Impact Development Standards Manual*, a biofiltration BMP must be designed to treat 1.5 times the volume of the SWQDv listed in Table 3, that is not reliably retained on-site, or Vb. This is achieved by filtering the water at a fixed rate, and detaining any runoff exceeding the fixed treatment rate in the onsite storm drain system until the water is drawn down.

The required treatment volume is calculated by multiplying the hydrograph flowrates generated by the County's HydroCalc software by 1.5. The resulting hydrograph represents the biofiltration volume, V_B, curve shown in Figure 4.

The Modular Wetland unit selected provides a suitable level of treatment while minimizing the product footprint and maintenance requirements. A single unit is selected for the proposed drainage area. The treatment capacity (treatment rate) of the Modular Wetland Unit, model MWS-L-8-12, is 0.346 cfs. Refer to Appendix E for manufacturer details and listed treatment capacity. The treatment capacity is then used to size a sump pump that will empty the detentions system at a rate less than the modular wetland treatment capacity, 0.20 cfs. Flow volume that arrives at pump at or below a flow rate less than 0.20 cfs is treated immediately, drains to the County Storm Drain and does not require detention. The volume not requiring detention is represented in green, Vb-t, in Figure 4. Flow volume that arrives at the pump at a flow rate greater than 0.20 cfs, Vb-d, remains in the detention system until it is pumped to the Modular Wetland. Excess water is diverted directly to the County Storm Drain, Project No 2775, Line A.

The following step by step calculations describe the BMP and detention system sizing required to satisfy the County of Los Angeles LID guidelines. Table 4B provides a summary of these calculations.

Subarea	BMP	BMP Max Treatment Rate (cfs)	Peak LID Flow Rate Delivered to BMP by pump (cfs)	V_{85th} (SWQDv) (ft^3)	BMP Volume Required, Vb (1.5xSWQDv) (ft^3)	BMP Volume Provided (ft^3)
A	BioClean, Modular Wetland (MWS-L-8-12) (Biofiltration)	0.346	0.20	27,807	41,711	

Table 4B. Low Impact Development Biofiltration BMP Design Summary

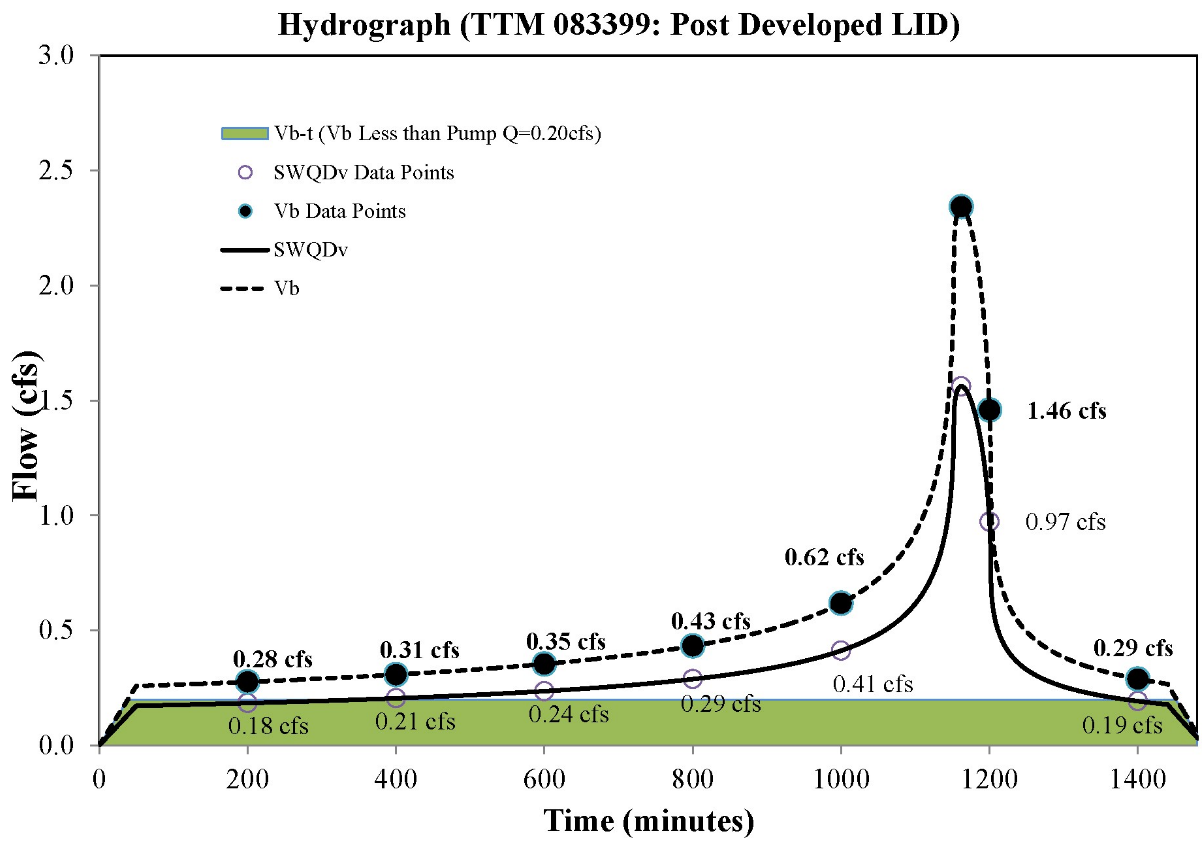

Figure 4. Post Developed LID Hydrograph

Step 1: Calculate the design volume

Biofiltration areas should be sized to capture and treat 1.5 times the portion of the SWQDv that is not reliably retained on the project site. From HydroCalc, the SWQDv is the runoff volume resulting from the 85th percentile; 24-hour rain event is listed in Table 3. Calculate the biofiltration volume, V_B.

$V_B = 1.5 \times (SWQDv - V_R)$

where:
- V_B = Biofiltration Volume, (ft^3),
- $SWQD_V$ = Storm water quality design volume, SWQDv, from HydroCalc. (ft^3),
- V_R = Volume of storm water runoff reliably retained onsite, (ft^3)

$V_B = 1.5 \times (27{,}807 \text{ ft}^3 - 0)$

$V_B = 41{,}711 \text{ ft}^3$

Step 2: Calculate the detention volume required

To determine the portion of V_B, that is being treated during the rain event as compared to volume that has to be detained, the SWQDv HydroCalc results are exported to Excel and a hydrograph plotted for 1.5 times the 85th percentile rain event flowrate. The resulting hydrograph represents the biofiltration volume, V_B, shown in Figure 4.

The portion of V_B arriving at the pump at a flow rate below pump discharge rate of 0.20 cfs is treated immediately and does not require detention; this volume is represented by the green shaded area in Figure 4, referred to herein as V_{B-T}. The remaining volume above the pump discharge rate is detained onsite in the StormTech detention system, referred to herein as V_{B-D}. The shaded area, V_{B-T}, is measured using formulas in Excel. The minimum volume required to be detained is as follows:

$$V_{B-D} = V_B - V_{B-T}$$

where:
V_{B-D} = Minimum Biofiltration Volume to be detained, (ft^3),
V_B = Biofiltration Volume from Step 1, (ft^3),
V_{B-T} = Biofiltration Volume Treated during event, shaded area from Fig 3 measured in Excel, (ft^3).

$$V_{B-D} = 41{,}711\text{ft}^3 - 17{,}416\text{ft}^3$$

$$\text{V}_{\text{B-D}} = 24{,}295\text{ ft}^3$$

Because HydroCalc outputs over 7,000 data points to generate the hydrograph, it is difficult to summarize the result; therefore, to verify the Excel results above for V_{B-T}, V_{B-T} is approximated using simplified trapezoidal areas shown in Figure 5.

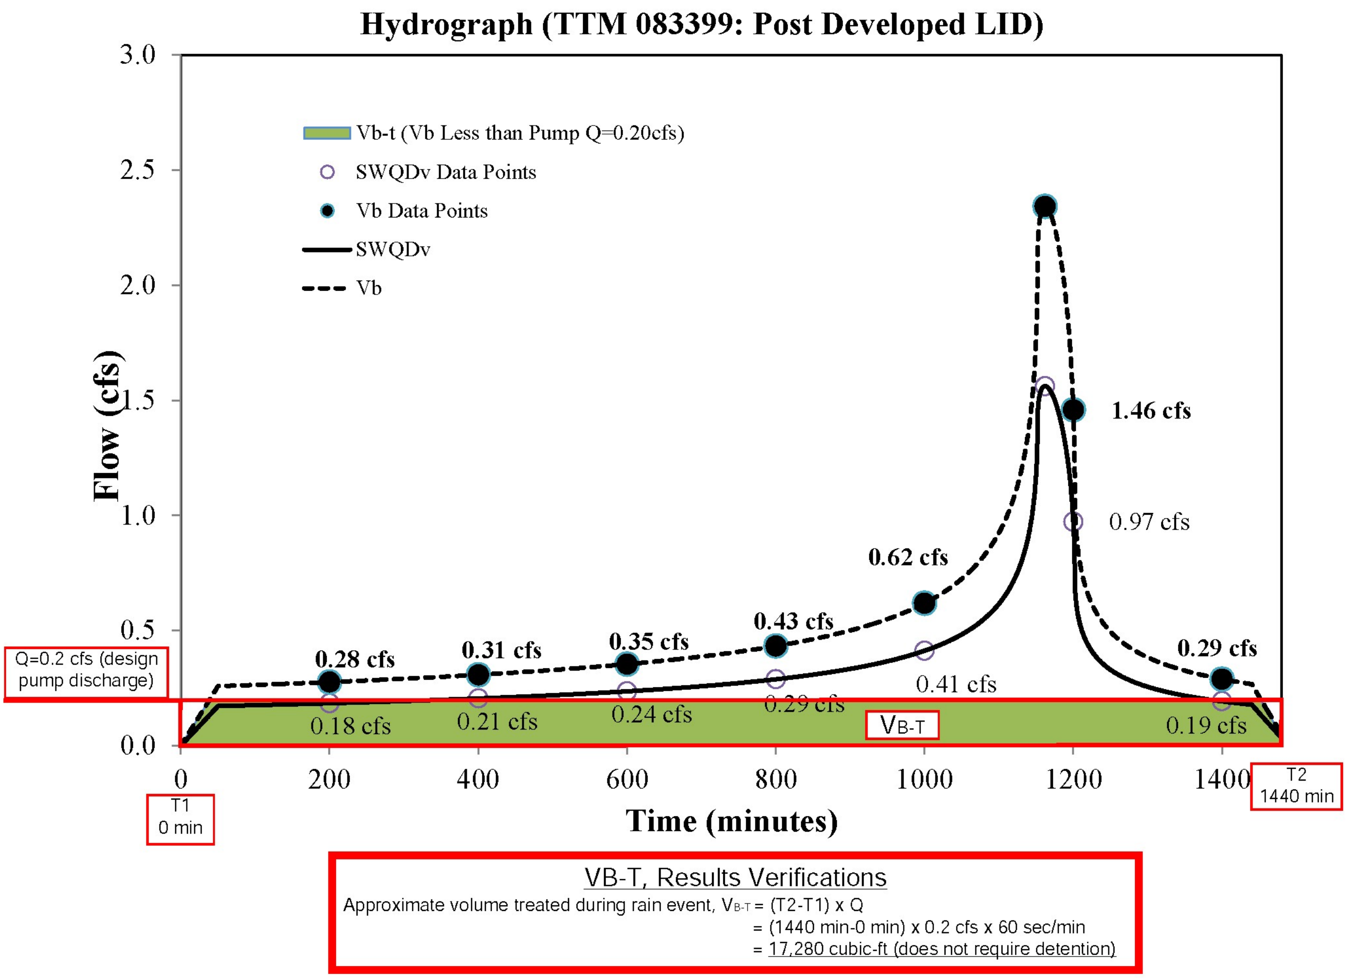

Figure 5. V_{B-T} Results Verification

The approximated total V_{B-T} in Figure 5 is similar to the results measured in Excel; therefore the Excel result provided in Step 2 is used for design.

Step 3: Calculate the detention volume provided

The minimum biofiltration volume to be detained onsite, V_{B-D} calculated in step 2, shall be stored in the StormTech system onsite. A weir within the StormTech system diverts water in excess of the design detention volume. The detention volume provided by the ADS stormtech system for infiltration analysis summarized in Section 3.4.2. is greater than the minimum detention volume required, V_{B-D}. Therefore, the system is capable of treating 1.5×SWQDv or the Biofiltration Volume.

4.0 CONCLUSION

TR 083399 will develop an existing paved drive-in theater into a residential lot and commercial lot. Lot 1, Subarea A, is being developed for residential purposes and includes preliminary measures to satisfy County of Los Angeles LID requirements and allowable discharge into a Los Angeles County Storm Drain, Lot 2, Subarea B, is being graded for future commercial use. Lot 2 satisfies County of Los Angeles allowable discharge requirements, but LID requirements are being deferred until the commercial lot is built out.

Infiltration has been identified as the most likely method for satisfying Los Angeles County Low Impact Development requirements. Preliminary geotechnical investigtions cannot confirm whether or not infiltration is suitable onsite. If infiltration is permitted afer further investigation, the detained volume generated by the 85th percentile rain event will be directed to onsite drywells at suitable depths. If infiltration system is not feasible, the required detention volume will be filtered by high flow biofiltration device over 96 hrs and released to Los Angeles County storm drain system onsite. Storm water in excess of the required treatment volume will be conveyed directly to Los Angeles County storm drain system.

LACFCD Facility: Name: Project No 7750
Unit: ______ Line: A Station: 4+52
City: South El Monte
*Street/Cross-street: between Rosemead Blvd and Chico Ave
*Thomas Guide: Page: 636 Grid: J2 ☒ Site Map/Plans Submitted
Info. Requested: Site was historically a drive-in theatre (also noted on the 7750 SD plan sheet 3), currently is being used as South el Monte swap meet. it is completely paved. Catchbasin located at station 4+52 is in a sump. We are preparing preliminary site plans and our intend is to increase pervious area and maintain drainage pattern as is. We may need to add additional catch basins onsite but those can be privately maintained. Please provide the allowable Q for the entire site
Thank you

***Required Information. See Page 2 of 2 for Instructions.**

BELOW SECTION TO BE COMPLETED BY THE HYDRAULIC ANALYSIS UNIT

INFORMATION PROVIDED:
Project No. 7750 Line "A" Hydrology Data, Drainage Map, As Built Drawing. MTD 138 Discharge Flow.

REFERENCES SEARCHED:
Project No. 7750 File, Drawing No. 470-7750-D.2-3, MTD 138 Files and Drawing No. 364-1115 F 8.1

COMMENTS, ETC:
A- Project No. 7750 Line "A"
1- Subarea No. 1 Allowable Q=1.46cfs/acre.
2- Subarea No. 2 Allowable Q=1.90cfs/acre.
3- Hydraulic Grade Line Shown on As Built Drawing No. 470-7750-D2-3

B- MTD 138
Allowable Discharge Flow into MTD 138 Limited to Q=1.0cfs/acre.

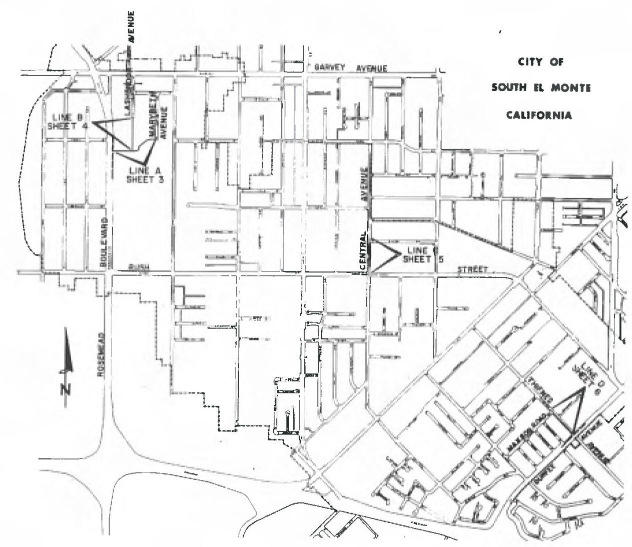
GENERAL NOTES

1. NUMBERS IN CIRCLES INDICATE ITEMS UNDER WHICH PAYMENT WILL BE MADE.
2. ELEVATIONS SHOWN ARE IN FEET ABOVE THE U.S.G.S. MEAN SEA LEVEL DATUM.
3. STATIONS SHOWN ON DRAWINGS ARE ALONG CENTER LINE OF CONDUIT OR ON A LINE NORMAL TO CENTER LINE OF CONDUIT.
4. STATIONS AND INVERT ELEVATIONS OF PIPE INLETS SHOWN ON THE PROFILES ARE AT THE INSIDE FACE OF THE CONDUIT, UNLESS OTHERWISE SHOWN.
5. ALL FIELD BOOK REFERENCES ARE TO CITY OF SOUTH EL MONTE FIELD BOOKS, UNLESS OTHERWISE NOTED.
6. ALL PIPE IN OPEN TRENCH SHALL BE BEDDED ACCORDING TO STANDARD DRAWING 2-D 177, CASE III, EXCEPT BELL AND SPIGOT PIPE WHICH SHALL BE CASE II BEDDING, UNLESS OTHERWISE SHOWN OR MODIFIED IN THE SPECIFICATIONS.
7. PIPE CONNECTIONS TO STORM DRAIN SHALL CONFORM TO STANDARD DRAWINGS 2-D 191 OR 2-D 193, UNLESS OTHERWISE SHOWN.
8. CONCRETE BACKFILL SHALL BE PROVIDED AROUND PIPE 21 INCHES IN DIAMETER OR LESS WHERE THE COVER IS EQUAL TO OR LESS THAN 2'-0", AROUND PIPE GREATER THAN 21 INCHES IN DIAMETER BUT LESS THAN 39 INCHES WHERE THE COVER IS LESS THAN 1'-3", AND FOR PIPE 39 INCHES OR GREATER WHERE THE COVER IS LESS THAN 1'-0". THE CONCRETE BACKFILL SHALL BE AS SPECIFIED ON STANDARD DRAWING NO. 2-D 177, NOTE 3.
9. TIES FOR CATCH BASINS AS SHOWN ON THE DRAWINGS ARE FROM CURB RETURN TO CENTER LINE OF CATCH BASIN, UNLESS OTHERWISE SHOWN.
10. FOR CATCH BASINS WITHOUT LOCAL DEPRESSIONS, CURB FACE SHALL BE THAT OF THE ADJACENT CURB UNLESS OTHERWISE NOTED ON PROJECT DRAWINGS.
11. CURB FACE (C.F.) SHOWN ON THE GENERAL PLAN PERTAINS TO THE CURB FACE AT THE CATCH BASIN OPENING UNLESS OTHERWISE NOTED. FOR LOCAL DEPRESSION NO. 2, THE CURB FACE SHALL BE THE EXISTING PLUS FOUR INCHES UNLESS OTHERWISE SPECIFIED. FOR LOCAL DEPRESSION NO. 4, REFER TO STANDARD DRAWING NO. 2-D 415.
12. LOCATIONS OF CATCH BASIN CONNECTOR PIPE JUNCTIONS WITH CATCH BASINS AS SHOWN ON THE DRAWINGS ARE SCHEMATIC. IT IS INTENDED THAT SUCH JUNCTIONS BE LOCATED AT THE DOWNSTREAM END OF THE CATCH BASIN, UNLESS A DETAIL OF THE CONNECTION IS SHOWN OR A NOTE SPECIFICALLY INDICATES OTHERWISE. IN ALL CASES, THE EXACT LOCATIONS WILL BE DETERMINED IN THE FIELD BY THE ENGINEER TO MEET FIELD CONDITIONS.
13. MONOLITHIC CATCH BASIN CONNECTIONS SHALL BE CONSTRUCTED, WHERE APPLICABLE, PER STANDARD DRAWING 2-D 224.
14. "V_i" IS THE DEPTH OF INLET OF CATCH BASINS IN SERIES MEASURED FROM TOP OF CURB TO INVERT OF CONNECTOR PIPE.
15. EXCEPT AS OTHERWISE NOTED, UTILITIES SHOWN ON THESE DRAWINGS ARE OWNED BY THE FOLLOWING AGENCIES:

GAS:	SO. CALIFORNIA GAS CO. (DISTRIBUTION LINES)
GAS:	PACIFIC LIGHTING SERVICE CO. (TRANSMISSION LINES)
WATER:	SAN GABRIEL VALLEY WATER CO.
TELEPHONE:	PACIFIC TEL. & TEL. CO.
ELECTRIC:	SO. CALIFORNIA EDISON CO.
SAN SEWERS:	CITY OF SOUTH EL MONTE



16. EXISTING UTILITIES SHALL BE MAINTAINED IN PLACE BY THE CONTRACTOR, UNLESS OTHERWISE NOTED.
17. THE CONTRACTOR SHALL MAKE EXPLORATORY EXCAVATIONS TO DETERMINE THE DEPTH AND LOCATION OF EXISTING UTILITIES WHERE SO INDICATED BY THE SYMBOL
18. UTILITIES DESIGNATED BY THE SYMBOL "*" WILL BE ABANDONED IN PLACE AND THE OWNER WILL INSTALL A NEW SECTION OF THE AFFECTED UTILITY AT A LOCATION IN CLOSE PROXIMITY TO, BUT WHICH DOES NOT PHYSICALLY INTERFERE WITH, THE PROPOSED STORM DRAIN CONDUIT AND APPURTENANT STRUCTURES.
19. UTILITIES DESIGNATED BY THE SYMBOL ≠ WILL BE REMOVED BY THE OWNER AND THE OWNER WILL REINSTALL A NEW SECTION OF THE AFFECTED UTILITY AT A LOCATION IN CLOSE PROXIMITY TO, BUT WHICH DOES NOT PHYSICALLY INTERFERE WITH, THE PROPOSED STORM DRAIN CONDUIT AND APPURTENANT STRUCTURES.
20. WHERE UTILITIES ARE INDICATED ON THE DRAWINGS TO BE SUPPORTED, SAID SUPPORTS SHALL BE IN ACCORDANCE WITH STANDARD DRAWING 2-D 173.1, .2 or .3, UNLESS OTHERWISE INDICATED.
21. LOCATIONS SHOWN ON THE PLANS FOR EXISTING SANITARY SEWER HOUSE CONNECTIONS ARE APPROXIMATE ONLY.
22. SANITARY SEWER HOUSE CONNECTION RECONSTRUCTION AND RECONNECTION SHALL BE IN ACCORDANCE WITH STANDARD DRAWING 2-D 250, UNLESS OTHERWISE SHOWN.
23. SANITARY SEWERS AND HOUSE CONNECTIONS CROSSING OVER THE STORM DRAIN TRENCH SHALL BE SUPPORTED IN ACCORDANCE WITH STANDARD DRAWING 2-D 173.1 to .3 and ENCASED PER GENERAL NOTE 1 ON STANDARD DRAWING 2-D 173.1.
24. WHEN INDICATED ON THE DRAWINGS, SANITARY SEWERS AND HOUSE CONNECTIONS SHALL BE ENCASED OR BLANKETED IN ACCORDANCE WITH STANDARD DRAWING 2-D 251.
25. ALL OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES SHALL BE SEALED WITH 8 INCHES OF BRICK AND MORTAR OR 6 INCHES OF CONCRETE, UNLESS OTHERWISE SHOWN.
26. ALL RESURFACING, CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS, AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED SHALL BE CONSTRUCTED AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS, UNLESS OTHERWISE NOTED.
27. REFER TO SHEET 2 FOR TYPICAL CATCH BASIN CONNECTOR PIPE PROFILE.
28. STREET RESURFACING PLANS ARE SHOWN ON SHEET 2 .
29. SOIL TEST BORINGS FOR THIS PROJECT WERE MADE IN MARCH AND JUNE, 1971.
30. AT SIDE OPENING CATCH BASIN LOCATIONS WHERE NO CURB EXISTS, THE CATCH BASIN SHALL BE BUILT WITH A CURB FACE OF 12 INCHES. WHERE THERE IS AN EXISTING CURB WITH A HEIGHT LESS THAN 8 INCHES, THE DEPTH OF DEPRESSION BELOW GUTTER GRADE SHALL BE SUFFICIENT TO PROVIDE AN 8 INCH OPENING INTO THE CATCH BASIN. WHERE THE EXISTING CURB HEIGHT IS 8 INCHES OR MORE, THE CURB FACE AT THE CATCH BASIN SHALL BE THAT OF THE EXISTING CURB HEIGHT PLUS 4 INCHES, UNLESS OTHERWISE SPECIFIED ON THE PROJECT DRAWINGS.
31. ASBESTOS CEMENT PIPE MAY BE USED IN LIEU OF REINFORCED CONCRETE PIPE FOR PIPE 42" OR LESS IN DIAMETER
32. THE REQUIRED D-LOAD FOR THE ASBESTOS CEMENT PIPE SHALL BE 1.5 TIMES THAT SPECIFIED ON THE PLANS FOR THE REINFORCED CONCRETE PIPE.
33. DESIGN OF THE PIPE SHOWN HEREON IS BASED ON THE ASSUMPTION THE PIPE WILL BE INSTALLED IN ACCORDANCE WITH CASE III BEDDING AS SHOWN ON STANDARD DRAWING 2-D 177 UNLESS OTHERWISE SHOWN. "W" VALUES SHALL BE AS SPECIFIED ON STANDARD DRAWING 2-D 177 FOR CASE III BEDDING, NOTES 3(a), 3(b), AND 3(c). IF THE "W" VALUE AT THE TOP OF THE PIPE IS EXCEEDED, THE BEDDING SHALL BE MODIFIED, AND/OR PIPE OF ADDITIONAL STRENGTH SHALL BE PROVIDED. THE PROPOSED MODIFICATION SHALL BE APPROVED BY THE DISTRICT.

TYPICAL CONNECTOR PIPE PROFILE

NO SCALE

NOTES:

1. THE CHANGE IN GRADE OF THE CONNECTOR PIPE MAY OCCUR EITHER OVER OR UNDER AN EXISTING UTILITY. THE PARTICULAR UTILITY AT WHICH THE CHANGE IN GRADE OCCURS, IS NOTED ON THE PROJECT DRAWINGS. AT LOCATIONS WHERE UTILITY CROSSINGS ARE MARKED ⚠, THE CONNECTOR PIPE GRADE WILL BREAK OVER THE UTILITY. AT LOCATIONS WHERE THE UTILITY CROSSINGS ARE MARKED ⚠, THE CONNECTOR PIPE GRADE WILL BREAK UNDER THE UTILITY.
2. ON THOSE CONNECTOR PIPES WHERE CHANGE IN GRADE IS NOT INDICATED, IT IS ASSUMED THAT THE CONNECTOR PIPE CAN BE LAID ON A STRAIGHT GRADE FROM THE CATCH BASIN TO THE STORM DRAIN WITHOUT INTERFERENCE WITH UTILITIES.
3. THE CONTRACTOR SHALL MAKE EXPLORATORY EXCAVATIONS TO DETERMINE THE EXACT LOCATION AND DEPTH OF UTILITIES, EXCEPT SANITARY SEWER, WHICH ARE MARKED ⚠ or ⚠. AFTER THE EXACT LOCATION OF A UTILITY HAS BEEN DETERMINED, THE GRADE AND ALIGNMENT OF THE CONNECTOR PIPE WILL BE STAKED SO AS TO CLEAR THE UTILITY.
4. WHERE CONNECTOR PIPE HAS A GRADE CHANGE EXCEEDING 5° OR DIFFERS IN DIAMETER FROM THAT OF EXISTING PIPE, USE CONCRETE COLLAR AS PER STANDARD DRAWING 2-D393.

THESE LOCATIONS WILL BE MARKED y

SiteASSIST by StormTech — FOR STORMTECH INSTRUCTIONS, DOWNLOAD THE INSTALLATION APP

S EL MONTE_SUBAREA A

S EL MONTE, CA

MC-4500 STORMTECH CHAMBER SPECIFICATIONS

1. CHAMBERS SHALL BE STORMTECH MC-4500.
2. CHAMBERS SHALL BE ARCH-SHAPED AND SHALL BE MANUFACTURED FROM VIRGIN, IMPACT-MODIFIED POLYPROPYLENE COPOLYMERS.
3. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418-16a, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 60x101.
4. CHAMBER ROWS SHALL PROVIDE CONTINUOUS, UNOBSTRUCTED INTERNAL SPACE WITH NO INTERNAL SUPPORTS THAT WOULD IMPEDE FLOW OR LIMIT ACCESS FOR INSPECTION.
5. THE STRUCTURAL DESIGN OF THE CHAMBERS, THE STRUCTURAL BACKFILL, AND THE INSTALLATION REQUIREMENTS SHALL ENSURE THAT THE LOAD FACTORS SPECIFIED IN THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS, SECTION 12.12, ARE MET FOR: 1) LONG-DURATION DEAD LOADS AND 2) SHORT-DURATION LIVE LOADS, BASED ON THE AASHTO DESIGN TRUCK WITH CONSIDERATION FOR IMPACT AND MULTIPLE VEHICLE PRESENCES.
6. CHAMBERS SHALL BE DESIGNED, TESTED AND ALLOWABLE LOAD CONFIGURATIONS DETERMINED IN ACCORDANCE WITH ASTM F2787, "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS". LOAD CONFIGURATIONS SHALL INCLUDE: 1) INSTANTANEOUS (<1 MIN) AASHTO DESIGN TRUCK LIVE LOAD ON MINIMUM COVER 2) MAXIMUM PERMANENT (75-YR) COVER LOAD AND 3) ALLOWABLE COVER WITH PARKED (1-WEEK) AASHTO DESIGN TRUCK.
7. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT AS DEFINED IN SECTION 6.2.8 OF ASTM F2418 SHALL BE GREATER THAN OR EQUAL TO 500 LBS/IN/IN. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.
8. ONLY CHAMBERS THAT ARE APPROVED BY THE SITE DESIGN ENGINEER WILL BE ALLOWED. UPON REQUEST BY THE SITE DESIGN ENGINEER OR OWNER, THE CHAMBER MANUFACTURER SHALL SUBMIT A STRUCTURAL EVALUATION FOR APPROVAL BEFORE DELIVERING CHAMBERS TO THE PROJECT SITE AS FOLLOWS:
   - THE STRUCTURAL EVALUATION SHALL BE SEALED BY A REGISTERED PROFESSIONAL ENGINEER.
   - THE STRUCTURAL EVALUATION SHALL DEMONSTRATE THAT THE SAFETY FACTORS ARE GREATER THAN OR EQUAL TO 1.95 FOR DEAD LOAD AND 1.75 FOR LIVE LOAD, THE MINIMUM REQUIRED BY ASTM F2787 AND BY SECTIONS 3 AND 12.12 OF THE AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS FOR THERMOPLASTIC PIPE.
   - THE TEST DERIVED CREEP MODULUS AS SPECIFIED IN ASTM F2418 SHALL BE USED FOR PERMANENT DEAD LOAD DESIGN EXCEPT THAT IT SHALL BE THE 75-YEAR MODULUS USED FOR DESIGN.
9. CHAMBERS AND END CAPS SHALL BE PRODUCED AT AN ISO 9001 CERTIFIED MANUFACTURING FACILITY.

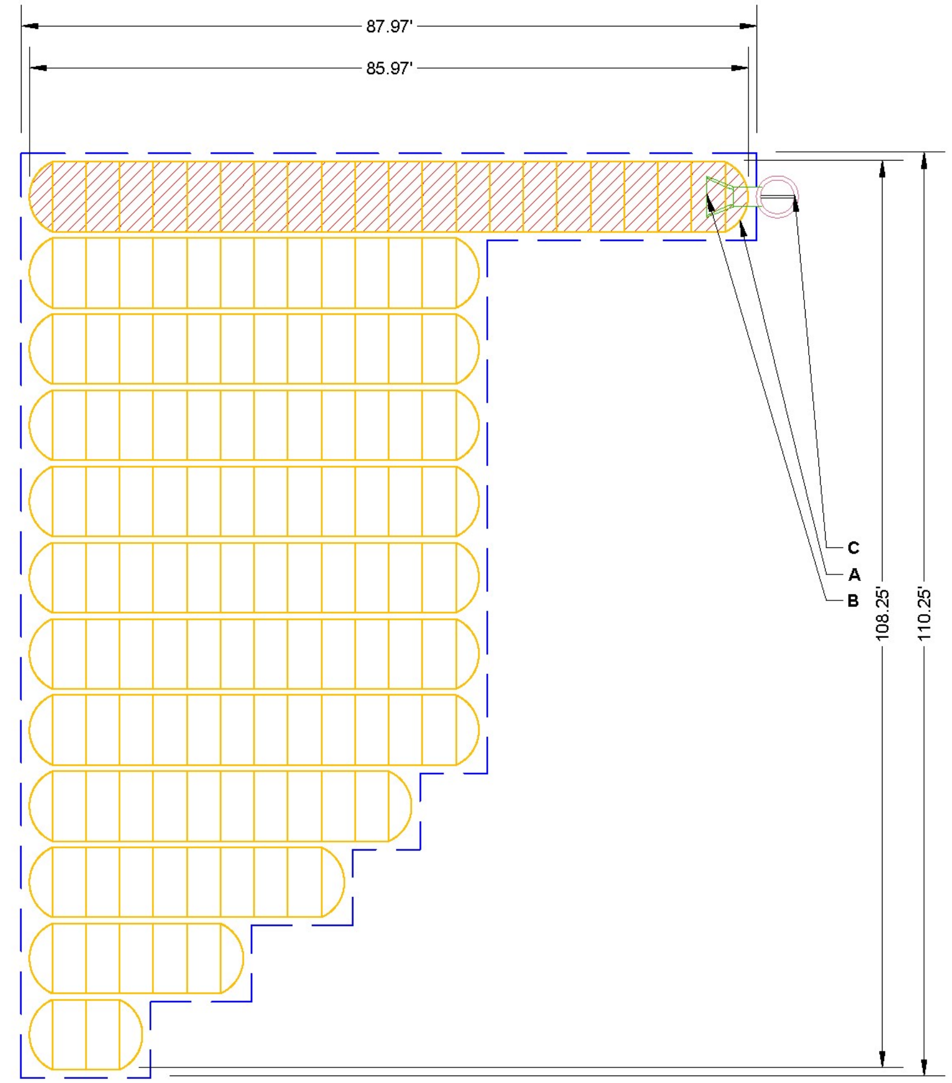
IMPORTANT - NOTES FOR THE BIDDING AND INSTALLATION OF MC-4500 CHAMBER SYSTEM

1. STORMTECH MC-4500 CHAMBERS SHALL NOT BE INSTALLED UNTIL THE MANUFACTURER'S REPRESENTATIVE HAS COMPLETED A PRE-CONSTRUCTION MEETING WITH THE INSTALLERS.
2. STORMTECH MC-4500 CHAMBERS SHALL BE INSTALLED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
3. CHAMBERS ARE NOT TO BE BACKFILLED WITH A DOZER OR EXCAVATOR SITUATED OVER THE CHAMBERS. STORMTECH RECOMMENDS 3 BACKFILL METHODS:
   - STONESHOOTER LOCATED OFF THE CHAMBER BED.
   - BACKFILL AS ROWS ARE BUILT USING AN EXCAVATOR ON THE FOUNDATION STONE OR SUBGRADE.
   - BACKFILL FROM OUTSIDE THE EXCAVATION USING A LONG BOOM HOE OR EXCAVATOR.
4. THE FOUNDATION STONE SHALL BE LEVELED AND COMPACTED PRIOR TO PLACING CHAMBERS.
5. JOINTS BETWEEN CHAMBERS SHALL BE PROPERLY SEATED PRIOR TO PLACING STONE.
6. MAINTAIN MINIMUM 9" (230 mm) SPACING BETWEEN THE CHAMBER ROWS.
7. INLET AND OUTLET MANIFOLDS MUST BE INSERTED A MINIMUM OF 12" (300 mm) INTO CHAMBER END CAPS.
8. EMBEDMENT STONE SURROUNDING CHAMBERS MUST BE A CLEAN, CRUSHED, ANGULAR STONE MEETING THE AASHTO M43 DESIGNATION OF #3 OR #4.
9. STONE SHALL BE BROUGHT UP EVENLY AROUND CHAMBERS SO AS NOT TO DISTORT THE CHAMBER SHAPE. STONE DEPTHS SHOULD NEVER DIFFER BY MORE THAN 12" (300 mm) BETWEEN ADJACENT CHAMBER ROWS.
10. STONE MUST BE PLACED ON THE TOP CENTER OF THE CHAMBER TO ANCHOR THE CHAMBERS IN PLACE AND PRESERVE ROW SPACING.
11. THE CONTRACTOR MUST REPORT ANY DISCREPANCIES WITH CHAMBER FOUNDATION MATERIAL BEARING CAPACITIES TO THE SITE DESIGN ENGINEER.
12. ADS RECOMMENDS THE USE OF "FLEXSTORM CATCH IT" INSERTS DURING CONSTRUCTION FOR ALL INLETS TO PROTECT THE SUBSURFACE STORMWATER MANAGEMENT SYSTEM FROM CONSTRUCTION SITE RUNOFF.

NOTES FOR CONSTRUCTION EQUIPMENT

1. STORMTECH MC-4500 CHAMBERS SHALL BE INSTALLED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
2. THE USE OF EQUIPMENT OVER MC-4500 CHAMBERS IS LIMITED:
   - NO EQUIPMENT IS ALLOWED ON BARE CHAMBERS.
   - NO RUBBER TIRED LOADER, DUMP TRUCK, OR EXCAVATORS ARE ALLOWED UNTIL PROPER FILL DEPTHS ARE REACHED IN ACCORDANCE WITH THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
   - WEIGHT LIMITS FOR CONSTRUCTION EQUIPMENT CAN BE FOUND IN THE "STORMTECH MC-3500/MC-4500 CONSTRUCTION GUIDE".
3. FULL 36" (900 mm) OF STABILIZED COVER MATERIALS OVER THE CHAMBERS IS REQUIRED FOR DUMP TRUCK TRAVEL OR DUMPING.

USE OF A DOZER TO PUSH EMBEDMENT STONE BETWEEN THE ROWS OF CHAMBERS MAY CAUSE DAMAGE TO CHAMBERS AND IS NOT AN ACCEPTABLE BACKFILL METHOD. ANY CHAMBERS DAMAGED BY USING THE "DUMP AND PUSH" METHOD ARE NOT COVERED UNDER THE STORMTECH STANDARD WARRANTY.



CONTACT STORMTECH AT 1-888-892-2694 WITH ANY QUESTIONS ON INSTALLATION REQUIREMENTS OR WEIGHT LIMITS FOR CONSTRUCTION EQUIPMENT.

NOTES

- MANIFOLD SIZE TO BE DETERMINED BY SITE DESIGN ENGINEER. SEE TECH NOTE #6.32 FOR MANIFOLD SIZING GUIDANCE.
- DUE TO THE ADAPTATION OF THIS CHAMBER SYSTEM TO SPECIFIC SITE AND DESIGN CONSTRAINTS, IT MAY BE NECESSARY TO CUT AND COUPLE ADDITIONAL PIPE TO STANDARD MANIFOLD COMPONENTS IN THE FIELD.
- THE SITE DESIGN ENGINEER MUST REVIEW ELEVATIONS AND IF NECESSARY ADJUST GRADING TO ENSURE THE CHAMBER COVER REQUIREMENTS ARE MET.
- THIS CHAMBER SYSTEM WAS DESIGNED WITHOUT SITE-SPECIFIC INFORMATION ON SOIL CONDITIONS OR BEARING CAPACITY. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR DETERMINING THE SUITABILITY OF THE SOIL AND PROVIDING THE BEARING CAPACITY OF THE INSITU SOILS. THE BASE STONE DEPTH MAY BE INCREASED OR DECREASED ONCE THIS INFORMATION IS PROVIDED.
- **NOT FOR CONSTRUCTION:** THIS LAYOUT IS FOR DIMENSIONAL PURPOSES ONLY TO PROVE CONCEPT & THE REQUIRED STORAGE VOLUME CAN BE ACHIEVED ON SITE.

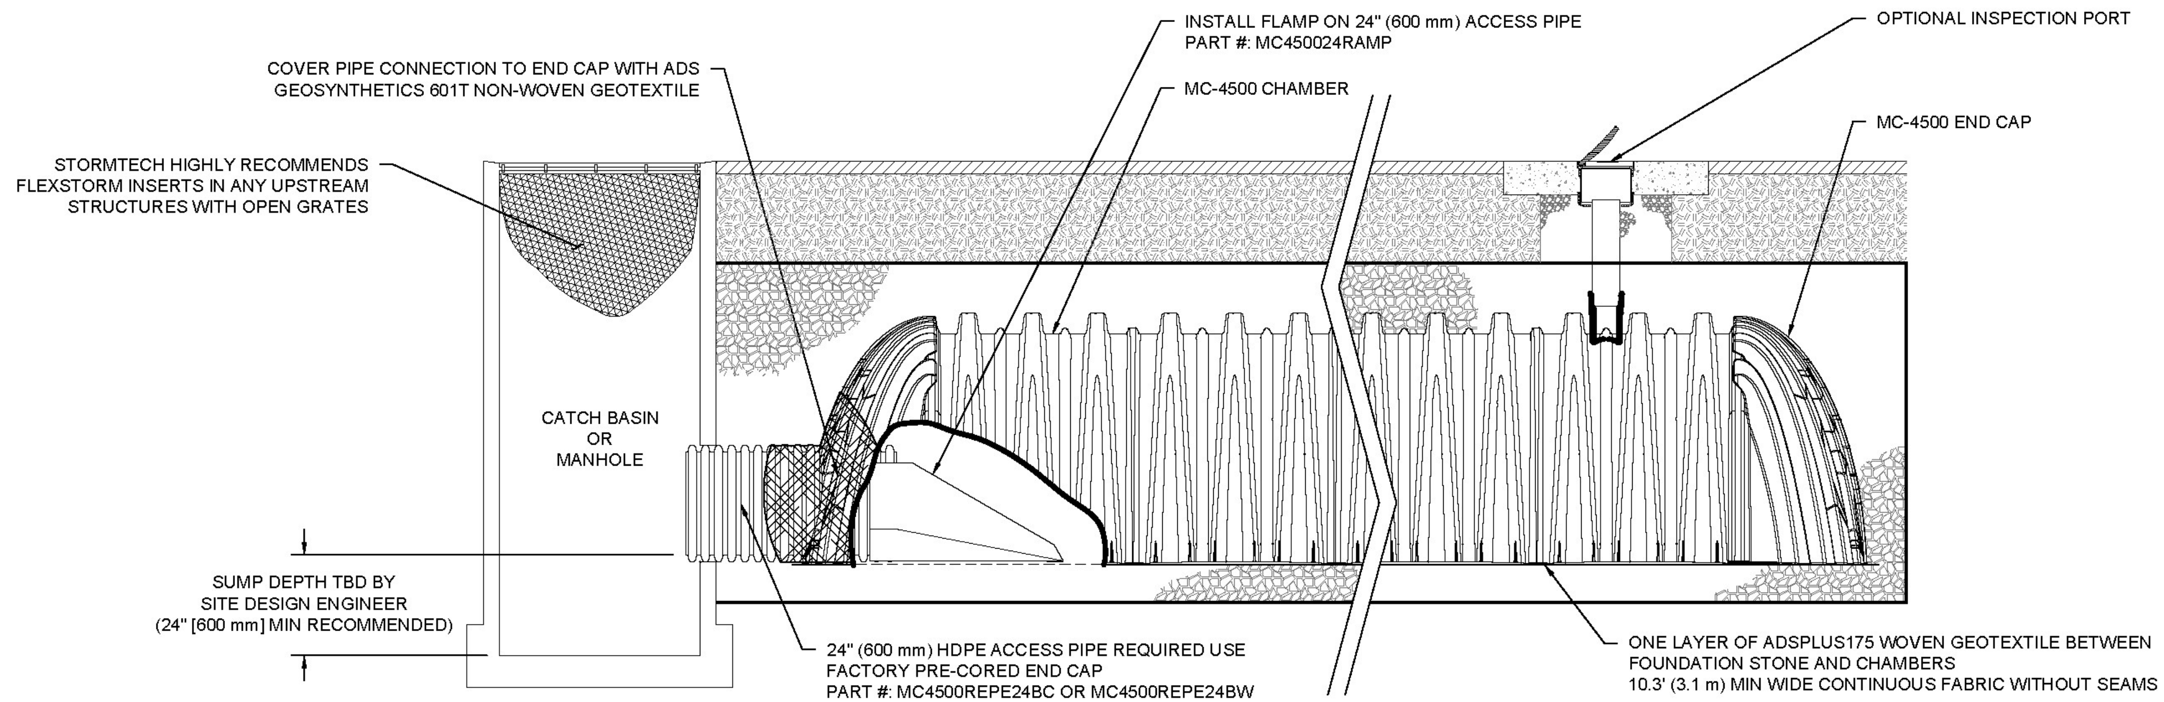
SHEET
2 OF 5

ACCEPTABLE FILL MATERIALS: STORMTECH MC-4500 CHAMBER SYSTEMS

	MATERIAL LOCATION	DESCRIPTION	AASHTO MATERIAL CLASSIFICATIONS	COMPACTION / DENSITY REQUIREMENT
D	**FINAL FILL:** FILL MATERIAL FOR LAYER 'D' STARTS FROM THE TOP OF THE 'C' LAYER TO THE BOTTOM OF FLEXIBLE PAVEMENT OR UNPAVED FINISHED GRADE ABOVE. NOTE THAT PAVEMENT SUBBASE MAY BE PART OF THE 'D' LAYER	ANY SOIL/ROCK MATERIALS, NATIVE SOILS, OR PER ENGINEER'S PLANS. CHECK PLANS FOR PAVEMENT SUBGRADE REQUIREMENTS.	N/A	PREPARE PER SITE DESIGN ENGINEER'S PLANS. PAVED INSTALLATIONS MAY HAVE STRINGENT MATERIAL AND PREPARATION REQUIREMENTS.
C	**INITIAL FILL:** FILL MATERIAL FOR LAYER 'C' STARTS FROM THE TOP OF THE EMBEDMENT STONE ('B' LAYER) TO 24" (600 mm) ABOVE THE TOP OF THE CHAMBER. NOTE THAT PAVEMENT SUBBASE MAY BE A PART OF THE 'C' LAYER.	GRANULAR WELL-GRADED SOIL/AGGREGATE MIXTURES, <35% FINES OR PROCESSED AGGREGATE. MOST PAVEMENT SUBBASE MATERIALS CAN BE USED IN LIEU OF THIS LAYER.	AASHTO M145[1] A-1, A-2-4, A-3 OR AASHTO M43[1] 3, 357, 4, 467, 5, 56, 57, 6, 67, 68, 7, 78, 8, 89, 9, 10	BEGIN COMPACTIONS AFTER 24" (600 mm) OF MATERIAL OVER THE CHAMBERS IS REACHED. COMPACT ADDITIONAL LAYERS IN 12" (300 mm) MAX LIFTS TO A MIN. 95% PROCTOR DENSITY FOR WELL GRADED MATERIAL AND 95% RELATIVE DENSITY FOR PROCESSED AGGREGATE MATERIALS.
B	**EMBEDMENT STONE:** FILL SURROUNDING THE CHAMBERS FROM THE FOUNDATION STONE ('A' LAYER) TO THE 'C' LAYER ABOVE.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43[1] 3, 4	NO COMPACTION REQUIRED.
A	**FOUNDATION STONE:** FILL BELOW CHAMBERS FROM THE SUBGRADE UP TO THE FOOT (BOTTOM) OF THE CHAMBER.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43[1] 3, 4	PLATE COMPACT OR ROLL TO ACHIEVE A FLAT SURFACE.[2,3]

PLEASE NOTE:
1. THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE: "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
2. STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 9" (230 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
3. WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.
4. ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.



NOTES:

1. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418-16a, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 60x101
2. MC-4500 CHAMBERS SHALL BE DESIGNED IN ACCORDANCE WITH ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
3. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS.
4. PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
5. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT AS DEFINED IN SECTION 6.2.8 OF ASTM F2418 SHALL BE GREATER THAN OR EQUAL TO 500 LBS/IN/IN. AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.

INSPECTION & MAINTENANCE

STEP 1) INSPECT ISOLATOR ROW PLUS FOR SEDIMENT
- A. INSPECTION PORTS (IF PRESENT)
  - A.1. REMOVE/OPEN LID ON NYLOPLAST INLINE DRAIN
  - A.2. REMOVE AND CLEAN FLEXSTORM FILTER IF INSTALLED
  - A.3. USING A FLASHLIGHT AND STADIA ROD, MEASURE DEPTH OF SEDIMENT AND RECORD ON MAINTENANCE LOG
  - A.4. LOWER A CAMERA INTO ISOLATOR ROW PLUS FOR VISUAL INSPECTION OF SEDIMENT LEVELS (OPTIONAL)
  - A.5. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.
- B. ALL ISOLATOR PLUS ROWS
  - B.1. REMOVE COVER FROM STRUCTURE AT UPSTREAM END OF ISOLATOR ROW PLUS
  - B.2. USING A FLASHLIGHT, INSPECT DOWN THE ISOLATOR ROW PLUS THROUGH OUTLET PIPE
    - i) MIRRORS ON POLES OR CAMERAS MAY BE USED TO AVOID A CONFINED SPACE ENTRY
    - ii) FOLLOW OSHA REGULATIONS FOR CONFINED SPACE ENTRY IF ENTERING MANHOLE
  - B.3. IF SEDIMENT IS AT, OR ABOVE, 3" (80 mm) PROCEED TO STEP 2. IF NOT, PROCEED TO STEP 3.

STEP 2) CLEAN OUT ISOLATOR ROW PLUS USING THE JETVAC PROCESS
- A. A FIXED CULVERT CLEANING NOZZLE WITH REAR FACING SPREAD OF 45" (1.1 m) OR MORE IS PREFERRED
- B. APPLY MULTIPLE PASSES OF JETVAC UNTIL BACKFLUSH WATER IS CLEAN
- C. VACUUM STRUCTURE SUMP AS REQUIRED

STEP 3) REPLACE ALL COVERS, GRATES, FILTERS, AND LIDS; RECORD OBSERVATIONS AND ACTIONS.

STEP 4) INSPECT AND CLEAN BASINS AND MANHOLES UPSTREAM OF THE STORMTECH SYSTEM.

NOTES

1. INSPECT EVERY 6 MONTHS DURING THE FIRST YEAR OF OPERATION. ADJUST THE INSPECTION INTERVAL BASED ON PREVIOUS OBSERVATIONS OF SEDIMENT ACCUMULATION AND HIGH WATER ELEVATIONS.
2. CONDUCT JETTING AND VACTORING ANNUALLY OR WHEN INSPECTION SHOWS THAT MAINTENANCE IS NECESSARY.

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURERS SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURERS CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE TO VERIFY PROJECT ENGINEERS RECOMMENDED BASE SPECIFICATIONS.
3. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE. (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL GAPS AROUND PIPES SHALL BE SEALED WATER TIGHT WITH A NON-SHRINK GROUT PER MANUFACTURERS STANDARD CONNECTION DETAIL AND SHALL MEET OR EXCEED REGIONAL PIPE CONNECTION STANDARDS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO GROUT ALL MANHOLES AND HATCHES TO MATCH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. DRIP OR SPRAY IRRIGATION REQUIRED ON ALL UNITS WITH VEGETATION.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT MANUFACTURER.

MWS-L-8-12-V
STORMWATER BIOFILTRATION SYSTEM STANDARD DETAIL

Inspection Guidelines for
Modular Wetland System - Linear

Inspection Summary

- <u>Inspect Pre-Treatment, Biofiltration and Discharge Chambers</u> – average inspection interval is 6 to 12 months.
  - (1*5 minute average inspection time*).
- <u>NOTE:</u> Pollutant loading varies greatly from site to site and no two sites are the same. Therefore, the first year requires inspection monthly during the wet season and every other month during the dry season in order to observe and record the amount of pollutant loading the system is receiving.

System Diagram

www.modularwetlands.com

Inspection Overview

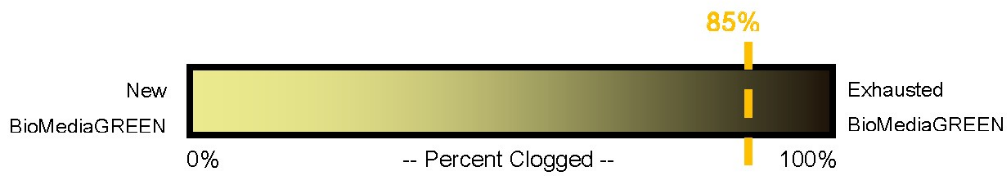
As with all stormwater BMPs inspection and maintenance on the MWS Linear is necessary. Stormwater regulations require that all BMPs be inspected and maintained to ensure they are operating as designed to allow for effective pollutant removal and provide protection to receiving water bodies. It is recommended that inspections be performed multiple times during the first year to assess the site specific loading conditions. This is recommended because pollutant loading and pollutant characteristics can vary greatly from site to site. Variables such as nearby soil erosion or construction sites, winter sanding on roads, amount of daily traffic and land use can increase pollutant loading on the system. The first year of inspections can be used to set inspection and maintenance intervals for subsequent years to ensure appropriate maintenance is provided. Without appropriate maintenance a BMP will exceed its storage capacity which can negatively affect its continued performance in removing and retaining captured pollutants.

Inspection Equipment

Following is a list of equipment to allow for simple and effective inspection of the MWS Linear:

- Modular Wetland Inspection Form
- Flashlight
- Manhole hook or appropriate tools to remove access hatches and covers
- Appropriate traffic control signage and procedures
- Measuring pole and/or tape measure.
- Protective clothing and eye protection.
- 7/16” open or closed ended wrench.
- Large permanent black marker (initial inspections only – first year)
- Note: entering a confined space requires appropriate safety and certification. It is generally not required for routine inspections of the system.

www.modularwetlands.com



Inspection Steps

The core to any successful stormwater BMP maintenance program is routine inspections. The inspection steps required on the MWS Linear are quick and easy. As mentioned above the first year should be seen as the maintenance interval establishment phase. During the first year more frequent inspections should occur in order to gather loading data and maintenance requirements for that specific site. This information can be used to establish a base for long term inspection and maintenance interval requirements.

The MWS Linear can be inspected though visual observation without entry into the system. All necessary pre-inspection steps must be carried out before inspection occurs, especially traffic control and other safety measures to protect the inspector and near-by pedestrians from any dangers associated with an open access hatch or manhole. Once these access covers have been safely opened the inspection process can proceed:

- Prepare the inspection form by writing in the necessary information including project name, location, date & time, unit number and other info (see inspection form).
- Observe the inside of the system through the access hatches. If minimal light is available and vision into the unit is impaired utilize a flashlight to see inside the system and all of its chambers.
- Look for any out of the ordinary obstructions in the inflow pipe, pre-treatment chamber, biofiltration chamber, discharge chamber or outflow pipe. Write down any observations on the inspection form.
- Through observation and/or digital photographs estimate the amount of trash, debris and sediment accumulated in the pre-treatment chamber. Utilizing a tape measure or measuring stick estimate the amount of trash, debris and sediment in this chamber. Record this depth on the inspection form.

- Through visual observation inspect the condition of the pre-filter cartridges. Look for excessive build-up of sediments on the cartridges, any build-up on the top of the cartridges, or clogging of the holes. Record this information on the inspection form. The pre-filter cartridges can further be inspected by removing the cartridge tops and assessing the color of the BioMediaGREEN filter cubes (requires entry into pre-treatment chamber – see notes above regarding confined space entry). Record the color of the material. New material is a light green in color. As the media becomes clogged it will turn darker in color, eventually becoming dark brown or black. Using the below color indicator record the percentage of media exhausted.

- The biofiltration chamber is generally maintenance free due to the system's advanced pre-treatment chamber. For units which have open planters with vegetation it is recommended that the vegetation be inspected. Look for any plants that are dead or showing signs of disease or other negative stressors. Record the general health of the plants on the inspection and indicate through visual observation or digital photographs if trimming of the vegetation is needed.
- The discharge chamber houses the orifice control structure, drain down filter and is connected to the outflow pipe. It is important to check to ensure the orifice is in proper operating conditions and free of any obstructions. It is also important to assess the condition of the drain down filter media which utilizes a block form of the BioMediaGREEN. Assess in the same manner as the cubes in the Pre-Filter Cartridge as mentioned above. Generally, the discharge chamber will be clean and free of debris. Inspect the water marks on the side walls. If possible, inspect the discharge chamber during a rain event to assess the amount of flow leaving the system while it is at 100% capacity (pre-treatment chamber water level at peak HGL). The water level of the flowing water should be compared to the watermark level on the side walls which is an indicator of the highest discharge rate the system achieved when initially installed. Record on the form is there is any difference in level from watermark in inches.

www.modularwetlands.com

- NOTE: During the first few storms the water level in the outflow chamber should be observed and a 6" long horizontal watermark line drawn (using a large permanent marker) at the water level in the discharge chamber while the system is operating at 100% capacity. The diagram below illustrates where a line should be drawn. This line is a reference point for future inspections of the system:

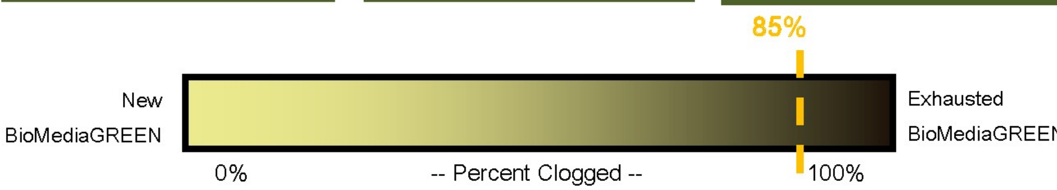
Using a permanent marker draw a 6 inch long horizontal line, as shown, at the higher water level in the MWS Linear discharge chamber.

- Water level in the discharge chamber is a function of flow rate and pipe size. Observation of water level during the first few months of operation can be used as a benchmark level for future inspections. The initial mark and all future observations shall be made when system is at 100% capacity (water level at maximum level in pre-treatment chamber). If future water levels are below this mark when system is at 100% capacity this is an indicator that maintenance to the pre-filter cartridges may be needed.
- Finalize inspection report for analysis by the maintenance manager to determine if maintenance is required.

Maintenance Indicators

Based upon observations made during inspection, maintenance of the system may be required based on the following indicators:

- Missing or damaged internal components or cartridges.
- Obstructions in the system or its inlet or outlet.
- Excessive accumulation of floatables in the pre-treatment chamber in which the length and width of the chamber is fully impacted more than 18”.



- Excessive accumulation of sediment in the pre-treatment chamber of more than 6” in depth.

www.modularwetlands.com

- Excessive accumulation of sediment on the BioMediaGREEN media housed within the pre-filter cartridges. The following chart shows photos of the condition of the BioMediaGREEN contained within the pre-filter cartridges. When media is more than 85% clogged replacement is required.

- Excessive accumulation of sediment on the BioMediaGREEN media housed within the drain down filter. The following photos show of the condition of the BioMediaGREEN contained within the drain down filter. When media is more than 85% clogged replacement is required.

www.modularwetlands.com

- Overgrown vegetation.

- Water level in discharge chamber during 100% operating capacity (pre-treatment chamber water level at max height) is lower than the watermark by 20%.

www.modularwetlands.com

Inspection Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

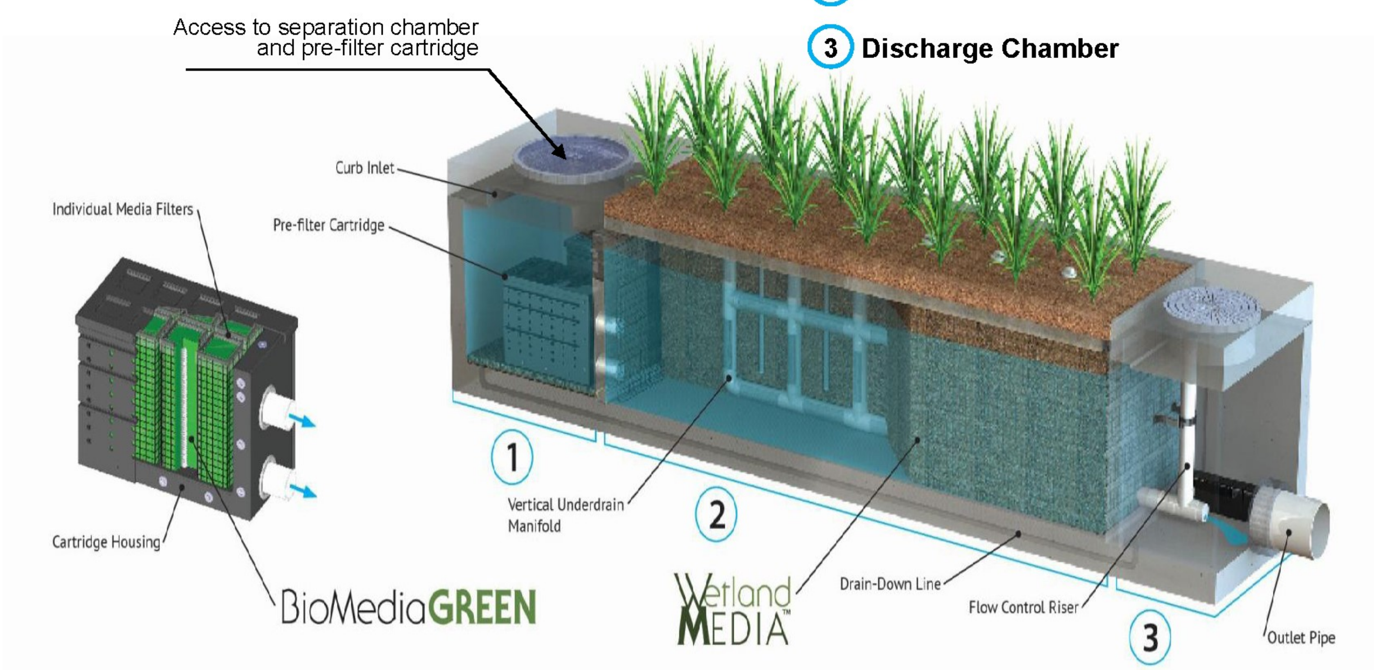
4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may not require irrigation after initial establishment.

Maintenance Guidelines for
Modular Wetland System - Linear

Maintenance Summary



- Remove Sediment from Pre-Treatment Chamber – average maintenance interval is 12 to 24 months.
  - (*10 minute average service time*).
- Replace Pre-Filter Cartridge Media – average maintenance interval 12 to 24 months.
  - (*10-15 minute per cartridge average service time*).
- Trim Vegetation – average maintenance interval is 6 to 12 months.
  - (*Service time varies*).

Maintenance Overview

The time has come to maintain your Modular Wetland System Linear (MWS Linear). To ensure successful and efficient maintenance on the system we recommend the following. The MWS Linear can be maintained by removing the access hatches over the systems various chambers. All necessary pre-maintenance steps must be carried out before maintenance occurs, especially traffic control and other safety measures to protect the inspector and near-by pedestrians from any dangers associated with an open access hatch or manhole. Once traffic control has been set up per local and state regulations and access covers have been safely opened the maintenance process can begin. It should be noted that some maintenance activities require confined space entry. All confined space requirements must be strictly followed before entry into the system. In addition the following is recommended:

- Prepare the maintenance form by writing in the necessary information including project name, location, date & time, unit number and other info (see maintenance form).
- Set up all appropriate safety and cleaning equipment.
- Ensure traffic control is set up and properly positioned.
- Prepare a pre-checks (OSHA, safety, confined space entry) are performed.

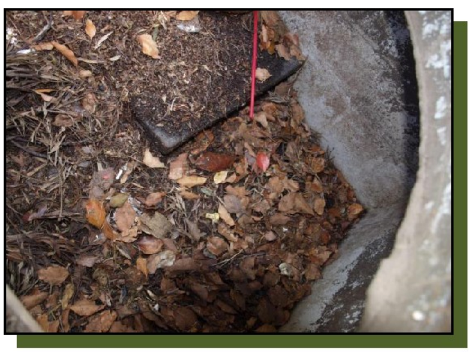
Maintenance Equipment

Following is a list of equipment required for maintenance of the MWS Linear:

- Modular Wetland Maintenance Form
- Manhole hook or appropriate tools to access hatches and covers
- Protective clothing, flashlight and eye protection.
- 7/16" open or closed ended wrench.
- Vacuum assisted truck with pressure washer.
- Replacement BioMediaGREEN for Pre-Filter Cartridges if required (order from manufacturer).

www.modularwetlands.com

Maintenance Steps



1. Pre-treatment Chamber (bottom of chamber)

   A. Remove access hatch or manhole cover over pre-treatment chamber and position vacuum truck accordingly.

   B. With a pressure washer spray down pollutants accumulated on walls and pre-filter cartridges.

   C. Vacuum out Pre-Treatment Chamber and remove all accumulated pollutants including trash, debris and sediments. Be sure to vacuum the floor until pervious pavers are visible and clean.

   D. If Pre-Filter Cartridges require media replacement move onto step 2. If not, replace access hatch or manhole cover.

Removal of access hatch to gain access below.

Insertion of vacuum hose into separation chamber.

Removal of trash, sediment and debris.

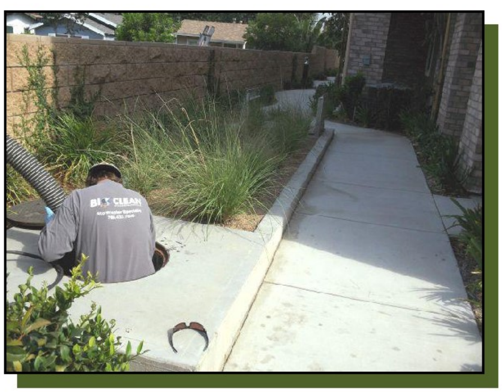
Fully cleaned separation chamber.

www.modularwetlands.com

2. Pre-Filter Cartridges (attached to wall of pre-treatment chamber)

A. After finishing step 1 enter pre-treatment chamber.

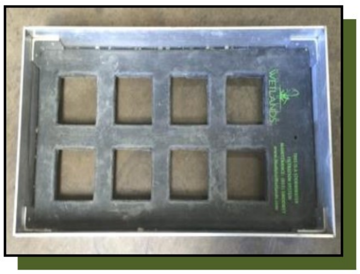
B. Unscrew the two bolts holding the lid on each cartridge filter and remove lid.



Pre-filter cartridges with tops on.

Inside cartridges showing media filters ready for replacement.

C. Place the vacuum hose over each individual media filter to suck out filter media.



Vacuuming out of media filters.

D. Once filter media has been sucked use a pressure washer to spray down inside of the cartridge and it's containing media cages. Remove cleaned media cages and place to the side. Once removed the vacuum hose can be inserted into the cartridge to vacuum out any remaining material near the bottom of the cartridge.

www.modularwetlands.com

E. Reinstall media cages and fill with new media from manufacturer or outside supplier. Manufacturer will provide specification of media and sources to purchase. Utilize the manufacture provided refilling trey and place on top of cartridge. Fill trey with new bulk media and shake down into place. Using your hands slightly compact media into each filter cage. Once cages are full removed refilling trey and replace cartridge top ensuring bolts are properly tightened.

Refilling trey for media replacement.

Refilling trey on cartridge with bulk media.

F. Exit pre-treatment chamber. Replace access hatch or manhole cover.

3. <u>Biofiltration Chamber (middle vegetated chamber)</u>

A. In general, the biofiltration chamber is maintenance free with the exception of maintaining the vegetation. Using standard gardening tools properly trim back the vegetation to healthy levels. The MWS Linear utilizes vegetation similar to surrounding landscape areas therefore trim vegetation to match surrounding vegetation. If any plants have died replace plants with new ones:

www.modularwetlands.com

4. Discharge Chamber (contains drain down cartridge & connected to pipe)

A. Remove access hatch or manhole cover over discharge chamber.
B. Enter chamber to gain access to the drain down filter. Unlock the locking mechanism and left up drain down filter housing to remove used BioMediaGREEN filter block as shown below:

C. Insert new BioMediaGREEN filter block and lock drain down filter housing back in place. Replace access hatch or manhole cover over discharge chamber.

www.modularwetlands.com

Inspection Notes

1. Following maintenance and/or inspection, it is recommended the maintenance operator prepare a maintenance/inspection record. The record should include any maintenance activities performed, amount and description of debris collected, and condition of the system and its various filter mechanisms.

2. The owner should keep maintenance/inspection record(s) for a minimum of five years from the date of maintenance. These records should be made available to the governing municipality for inspection upon request at any time.

3. Transport all debris, trash, organics and sediments to approved facility for disposal in accordance with local and state requirements.

4. Entry into chambers may require confined space training based on state and local regulations.

5. No fertilizer shall be used in the Biofiltration Chamber.

6. Irrigation should be provided as recommended by manufacturer and/or landscape architect. Amount of irrigation required is dependent on plant species. Some plants may not require irrigation after initial establishment.

Inspection Checklist

Modular Wetland System Type (Curb, Grate or UG Vault): ______________ Size (22', 14' or etc.): ______________

Structural Integrity:	**Yes**	**No**	**Comments**	
Damage to pre-treatment access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?				
Damage to discharge chamber access cover (manhole cover/grate) or cannot be opened using normal lifting pressure?				
Does the MWS unit show signs of structural deterioration (cracks in the wall, damage to frame)?				
Is the inlet/outlet pipe or drain down pipe damaged or otherwise not functioning properly?				
Working Condition:				
Is there evidence of illicit discharge or excessive oil, grease, or other automobile fluids entering and clogging the unit?				
Is there standing water in inappropriate areas after a dry period?				
Is the filter insert (if applicable) at capacity and/or is there an accumulation of debris/trash on the shelf system?				
Does the depth of sediment/trash/debris suggest a blockage of the inflow pipe, bypass or cartridge filter? If yes specify which one in the comments section. Note depth of accumulation in in pre-treatment chamber.				Depth:
Does the cartridge filter media need replacement in pre-treatment chamber and/or discharge chamber?			Chamber:	
Any signs of improper functioning in the discharge chamber? Note issues in comments section.				
Other Inspection Items:				
Is there an accumulation of sediment/trash/debris in the wetland media (if applicable)?				
Is it evident that the plants are alive and healthy (if applicable)? Please note Plant Information below.				
Is there a septic or foul odor coming from inside the system?				

Waste:	**Yes**	**No**
Sediment / Silt / Clay		
Trash / Bags / Bottles		
Green Waste / Leaves / Foliage		

Recommended Maintenance	
No Cleaning Needed	
Schedule Maintenance as Planned	
Needs Immediate Maintenance	

Plant Information	
Damage to Plants	
Plant Replacement	
Plant Trimming

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole–foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures.** Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

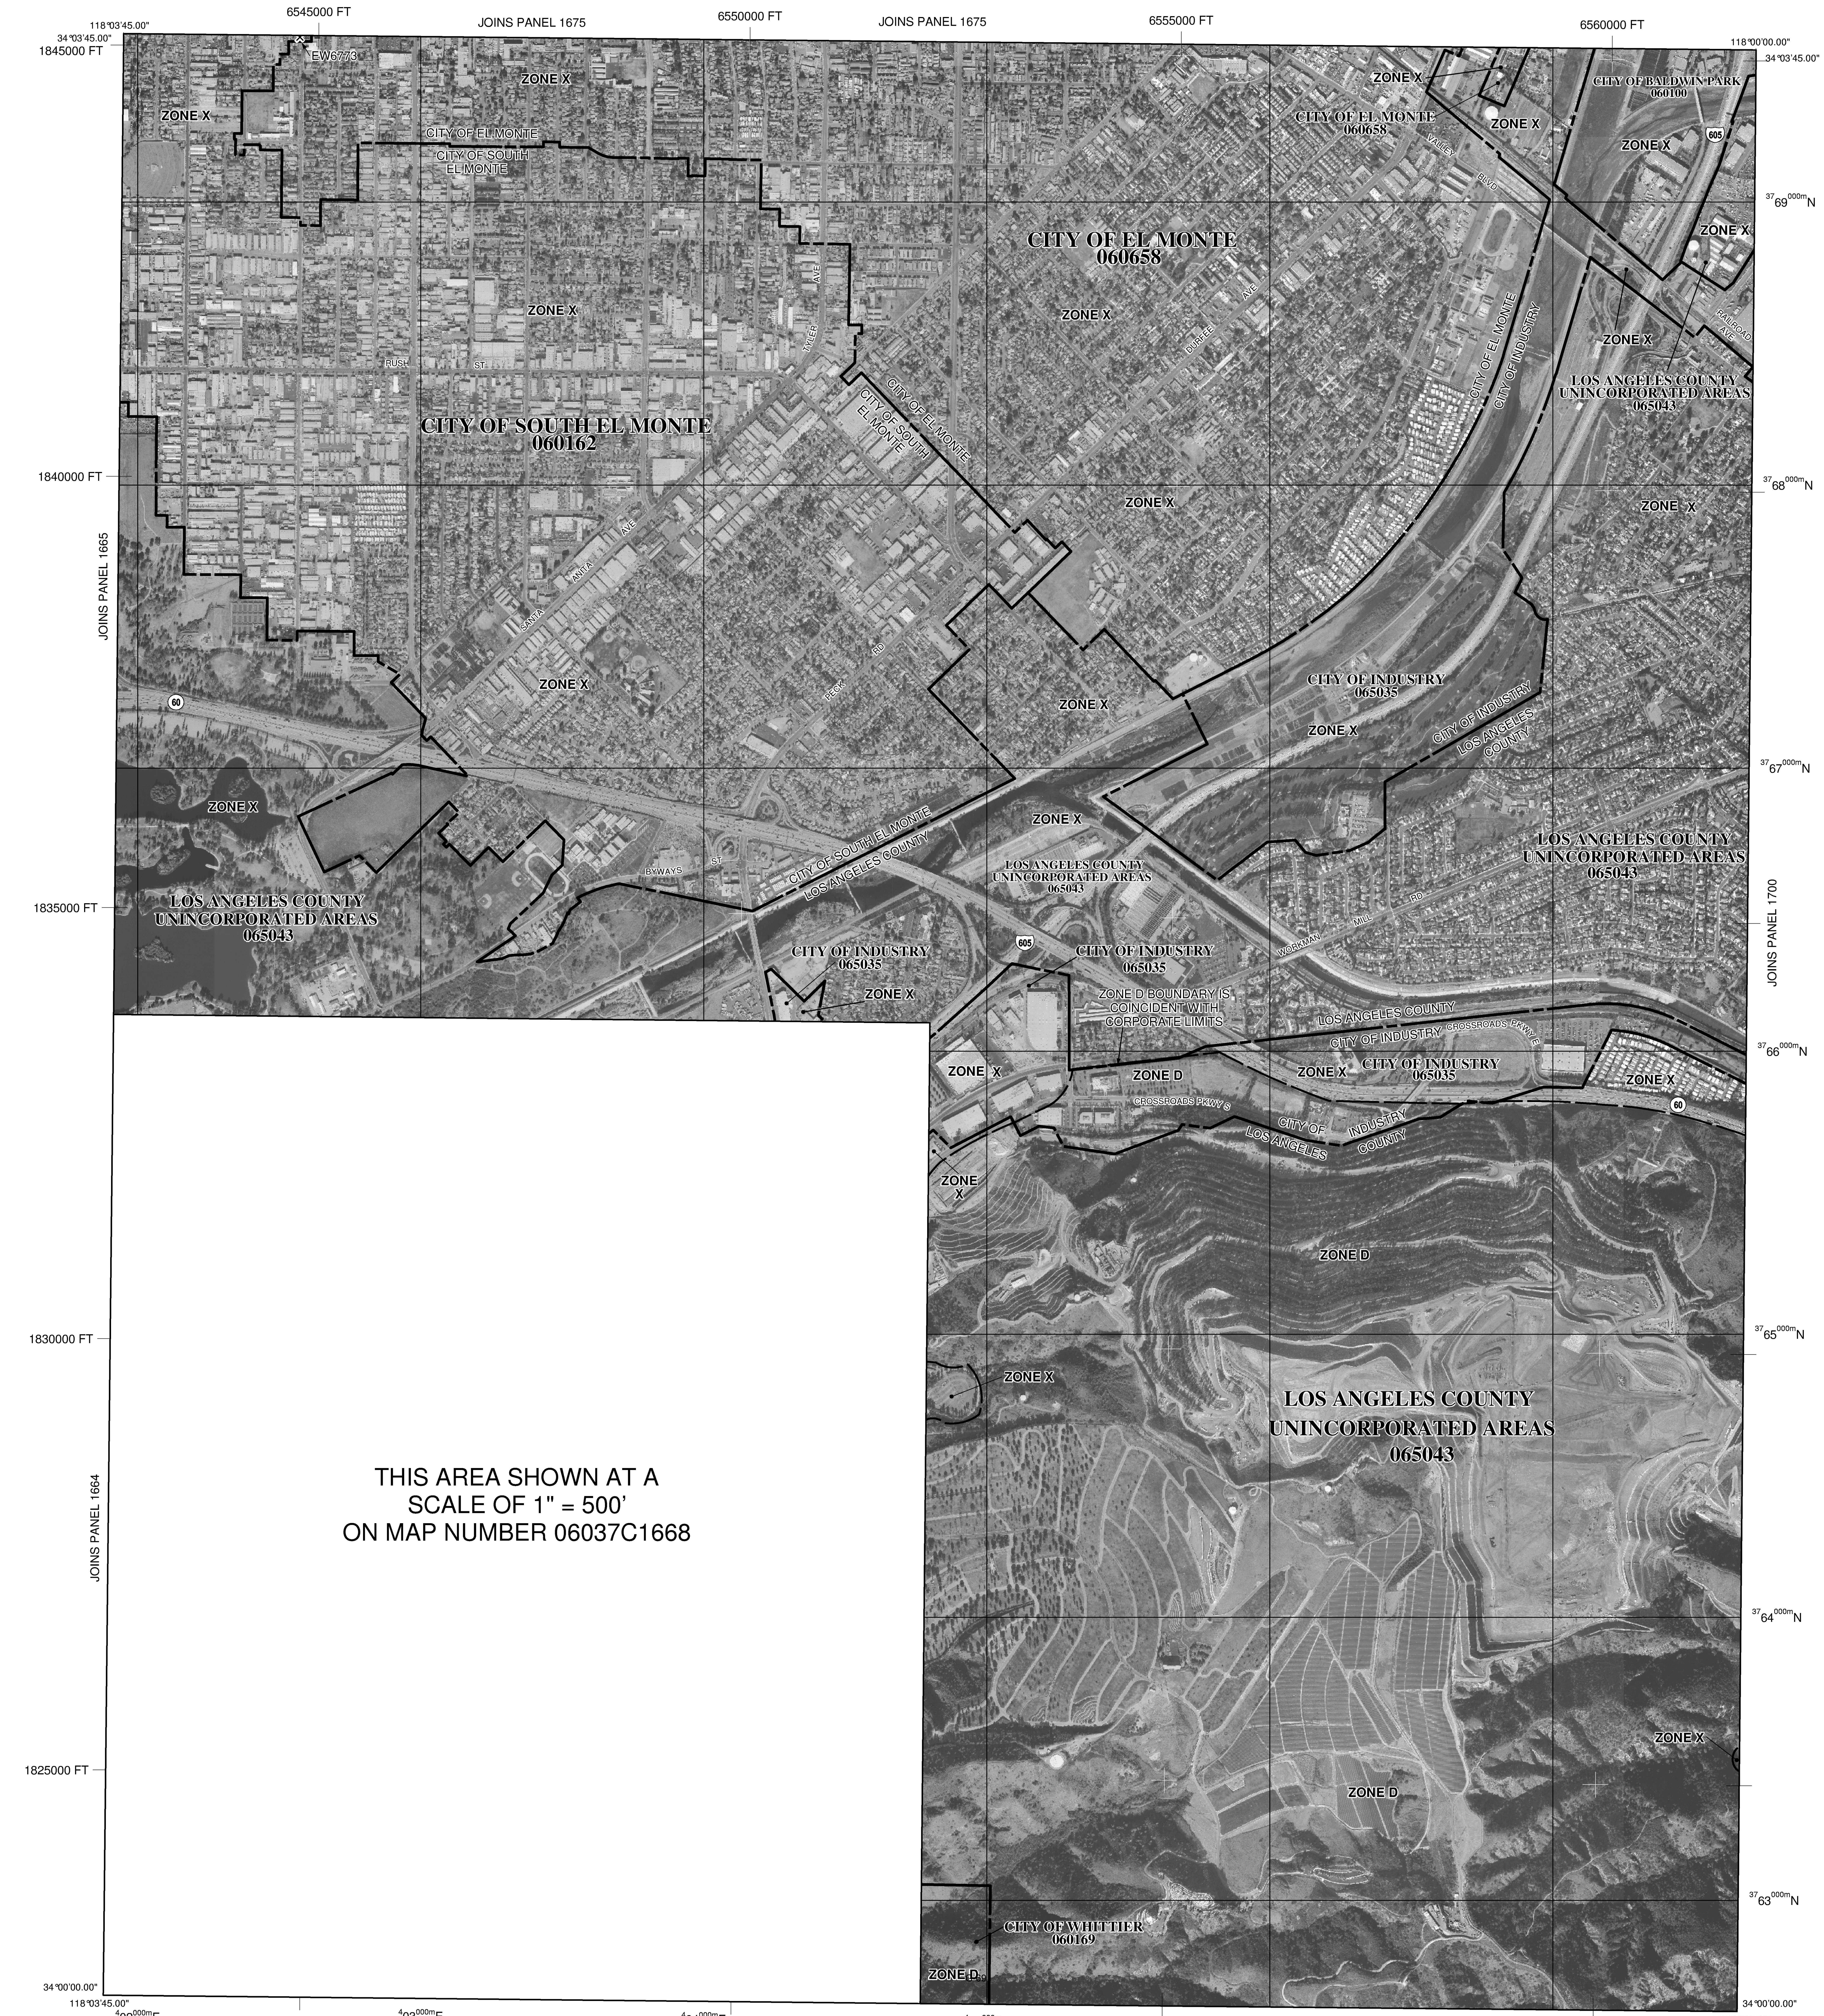
The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 11. The **horizontal datum** was NAD83, GRS1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum.** For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC–3, #9202
1315 East–West Highway
Silver Spring, MD 20910–3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713–3242,** or visit its website at http://www.ngs.noaa.gov/.

Base map information shown on this FIRM was derived from U.S. Geological Survey Digital Orthophoto Quadrangles produced at a scale of 1:12,000 from photography dated 1994 or later and from National Geospatial Intelligence Agency imagery produced at a scale of 1:4,000 from photography dated 2003 or later.



This map reflects more detailed and up–to–date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables *in the Flood Insurance Study report (which contains authoritative hydraulic data*) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de–annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1–800–358–9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, *a Flood Insurance Study report*, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1–800–358–9620 and its website at http://www.msc.fema.gov/.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1–877–FEMA MAP** (1–877–336–2627) or visit the FEMA website at http://www.fema.gov/.

LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X	Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D	Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

1% annual chance floodplain boundary
0.2% annual chance floodplain boundary
Floodway boundary
Zone D boundary
CBRS and OPA boundary
Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.

~~ 513 ~~~~	Base Flood Elevation line and value; elevation in feet*
(EL 987)	Base Flood Elevation value where uniform within zone; elevation in feet*

Subject: Geotechnical Investigation
Solemo 13 Acres
2540 Rosemead Boulevard
South El Monte, CA

Dear Mr. Lelie:

In accordance with your request, a geotechnical investigation has been completed for the proposed development at the above referenced property. The results of the investigation are presented in the accompanying report, which includes a description of site conditions, results of our field exploration and testing, laboratory testing, conclusions, and recommendations. This report has been prepared for specific application to this project, in accordance with generally accepted geotechnical engineering practice.

We appreciate this opportunity to be of service to you. If you have any questions regarding this report, please do not hesitate to contact us at your convenience.

Respectfully submitted,

APPENDICES

1.00 INTRODUCTION

1.01 Purpose

The purpose of the investigation was to summarize geotechnical and geologic conditions at the site and to assess their potential impact on the proposed development.

1.02 Scope of the Investigation

The general scope of this geotechnical investigation included the following:

- Review of published and unpublished geologic, seismic, groundwater, and geotechnical literature
- Examination of aerial photographs and topographic maps
- Review of State of California Alquist-Priolo Earthquake Fault Zone and Seismic Hazard maps
- Contacting of Underground Service Alert (USA) to locate onsite utility lines
- Logging, sampling, and backfilling of seven (7) hollow stem auger boring (9 inches diameter) to maximum depths of 50 feet and logging of nine (9) test pits dug with a backhoe to a maximum depth of 17 feet
- Laboratory testing of representative soil samples
- Geotechnical evaluation of the compiled data
- provide a preliminary or narrow range estimate of the expected infiltration rate
- Preparation of this report presenting our findings, conclusions, and recommendations

Our scope of work did not include a preliminary site assessment for the potential of hazardous materials onsite.

1.03 Site Location and Description

The KB Home site is located at Rosemead Boulevard, in El Monte, California within a residential and commercial area. The 17 acre plus property includes Assessor Parcel Numbers 8102-037-020, 8102-037-021, 8102-037-001, 8102-035-017, 8102-029-025, 8102-029-007, 8102-029-006, 8102-029-005, 8102-029-026, 8102-029-019, & 8102-029-020. The site currently serves as a swap meet and drive in theatre. The site is bounded on the south by commercial buildings, on the north by commercial and residential buildings, on the east by Chico Avenue and on the west by Rosemead Boulevard (Site Vicinity Map, Figure 1). There is approximately 12 feet of relief across the site which gently slopes from east to west towards Rosemead Boulevard. The ground surface has been modified by past grading activities. Structures on the site consist of several drive-in associated buildings including two concession stands and a maintenance building. Paved parking areas surround much of the buildings.

The site coordinates are 34.0583 North and -118.0614 West. .

1.04 Site History

Based on review of aerial photographs and other information readily available online the site appears to have

been a mix of vacant land and agricultural land from as far back as 1927 up until the 1950s when the site was paved over and developed for its present day use.

1.05 Planned Development

Formal plans for this site have not been drafted but it is presumed that the site will be developed for residential use.

1.06 Investigation Methods

Our investigation consisted of office research, field exploration, laboratory testing, review and analysis of the compiled data, and preparation of this report. It has been performed in a manner consistent with generally accepted engineering and geologic principles and practices, and has incorporated applicable requirements of California Buildings Code. Definitions of technical terms and symbols used in this report include those of the ASTM International, the California Building Code, and commonly used geologic nomenclature.

Technical supporting data are presented in the attached appendices. Appendix A presents a description of the methods and equipment used in performing the field exploration and logs of our subsurface exploration. Appendix B presents a description of our laboratory testing and the test results. General Earthwork and Grading Specifications are presented in Appendix C. Appendix D presents our engineering analysis. References are presented in Appendix E.

2.00 FINDINGS

2.01 Geologic Setting

The site lies at the southeastern end of the San Gabriel Valley the southern boundary of which is marked by the Puente and Montebello Hills. The valley is an east-west trending structural basin that has accumulated a thick sequence of Holocene- to Pleistocene-age alluvial sediments. The site is situated on a broad alluvial fan emanating from the San Gabriel Mountains to the north. The fan in the area of the site has been dissected by the ancestral San Gabriel Wash to the east and the Rio Hondo Wash at the west.

The earth materials that underlie the site consist of interbedded silt, clay and sand and gravel. Asphalt paving covers most of the site. A full description of the earth materials encountered within each borehole is included on the boring logs, Appendix A.

2.02 Earth Materials

Asphalt and Base

Asphalt and base conditions varied widely across all seven borings and ten test pits. Asphalt paving of up to 2 inches thick overlying up to 2 inches thick base where encountered. In several test pits, two generations of asphalt and concrete where discovered.

Artificial Fill (af)

Artificial fill is at a maximum of 5 feet thick as observed in the boring excavations and is composed of moderate orange brown fine silty sand with clay. It is slightly micaceous, slightly moist and medium dense.

Alluvium Deposits (Q_a)

Quaternary aged alluvial deposits are underlying artificial fill material. This unit consists of light orange brown to whitish grey, interbedded silty sand, sand, clayey sand and clay with sand. The sand was micaceous and ranged from course to fine. The sandy units were in a medium dense to dense condition. The soils were slightly moist with moist conditions occurring in the sand layers at the contact with the finer grained materials. Layers of course to fine gravels were encountered in some samples generally below 17 feet.

2.03 Expansive Soils

Based on our preliminary observations and laboratory data, the soils at shallow depths are expected to have an expansion index in the very low range. Additional expansion index and plasticity index testing will be required at the completion of rough grading to verify the properties of the near surface soils.

2.04 Surface and Groundwater Conditions

Groundwater was not encountered in the boring excavated to a maximum depth of 50 feet. Surface water on the site is limited to precipitation falling directly around the buildings on the site. Depth to groundwater in a monitoring well (Well ID: 2944F) located approximately 0.3 miles to the southeast of the site as measured in May 2020 was 47.68 feet. There was no surface water encountered at the time of our investigation. Depth to historic high groundwater is approximately 5 feet below existing grade according to the Seismic Hazard Zone Report for the El Monte Quadrangle (CDMG, 1998).

2.05 Faults

The proposed site is not located within an Alquist-Priolo Earthquake Fault Zone, and there are no known active faults on or immediately adjacent to the property. However, there are faults in close enough proximity to the site to cause moderate to intense ground shaking during the lifetime of the proposed development. Additionally, the site has experienced earthquake-induced ground shaking in the past and can be expected to experience further shaking in the future. The closest zoned fault is the East Montebello fault zone, located approximately 1.35 miles to the southwest of the subject site.

2.06 Landslides

According to the California Geological Survey Seismic Hazard Zones Map of the El Monte Quadrangle (2017) the site does not lie in a landslide hazard zone. Since the site is relatively flat earthquake-induced landsliding does not appear to be a hazard to proposed development.

2.07 Liquefaction

According to the State of California Seismic Hazard Zones Map of the El Monte Quadrangle, the site lies within a "Zone of Required Investigation for Liquefaction". Therefore, a liquefaction screening evaluation has been performed in accordance with California Geological Survey Special Publication SP-117A (2008), "Guidelines for Evaluating and Mitigating Seismic Hazards in California". The findings of our liquefaction screening evaluation are presented in section 3.04 of this report.

2.08 Historic Seismicity

The region of the subject site has experienced shaking from several earthquakes recorded back to 1812. The nearest large historic earthquake is the Raymond fault that occurred in 1855, the epicenter of which is 3.6 miles from the site. Historic earthquakes with magnitudes of greater than or equal to 6.0 and have been epicentered within approximately 50 miles of the site, are summarized in the table below.

Large Historic Earthquakes

Event	LAT. NORTH	LONG. WEST	DATE	Quake Mag.	APPROX. DISTANCE mi
Raymond	34.100	118.100	7/11/1855	6.3	3.60
Northridge	34.2130	118.5370	01/17/1994	6.7	29.2
Long Beach	33.6170	117.967	3/11/1933	6.3	30.9
	34.4110	118.4010	02/09/1971	6.4	31.1
	34.3	117.6	07/30/1894	6.0	31.2
Wrightwood	34.3	117.65	12/08/1812	7.0	31.9
	34.0	117.5	12/16/1858	7.0	32.4
	34.3	118.6	04/04/1893	6.0	35.0
	34.3	117.50	07/22/1899	6.50	36.1
	33.7	117.4	05/15/1910	6.0	45.3
	34.0	117.25	07/23/1923	6.25	46.6

3.00 CONCLUSIONS AND RECOMMENDATIONS

3.01 General Conclusion

Based on the data collected thus far the project appears feasible from a geotechnical standpoint. Our preliminary recommendations provided below are based on the data collected thus far and our understanding of the project and our general experience in engineering geology and geotechnical engineering.

3.02 Seismic Design Parameters

Mapped Spectral Accelerations were obtained by using the online ATC Calculator (ASCE 7-16 Standard) and a site class D-default was used for the project site. Since the mapped risk-targeted maximum considered earth quake (MCE_R) spectral response acceleration parameter at a period of 1 second (S_1) is greater than 0.2, a ground

motion hazard analysis is required per ACSE/SEI 7-16 to be performed in accordance with Section 21.2 for structures on Site Class D. However, instead of performing the ground motion hazard analysis, a long period coefficient (F_V) of 1.7 was used for calculation of S_{M1} and S_{D1}. The parameters generated for the subject site are presented in the following table:

2019 California Building Code (CBC) Seismic Parameters

Parameter	Value
Site Location	Latitude = 34.0583 degrees Longitude = -118.0614 degrees
Site Class	Site Class = D-default
Mapped Spectral Accelerations	S_s (0.2- second period) = 1.902g S_1 (1-second period) = 0.685g
Site Coefficients (Site Class D-default)	F_a = 1.2 F_v = 1.7
Maximum Considered Earthquake Spectral Accelerations (Site Class D-default)	S_{MS} (0.2- second period) = 2.283g S_{M1} (1-second period) = 1.165g
Design Earthquake Spectral Accelerations (Site Class D-default)	S_{DS} (0.2- second period) = 1.522g S_{D1} (1-second period) = 0.776g

For Risk Category II structures with mapped spectral response acceleration parameter at 1-s period (S_1) is less than 0.75, the Seismic Design Category is D (ASCE 7-16 Section 11.6).

Peak earthquake ground acceleration adjusted for site class effects (PGAM) has been determined in accordance with ASCE 7-10 Section 11.8.3 as follows: $PGA_M = F_{PGA}$ x PGA = 1.2 x 0.82g = 0.984g.

3.03 Liquefaction and Secondary Earthquake Hazards

Potential secondary seismic hazards that can affect land development projects include liquefaction, tsunamis, seiches, seismically induced settlement, seismically induced flooding and seismically induced landsliding.

Liquefaction

Liquefaction hazard potential for the site is discussed in Section 2.07 and Section 3.04 of this report.

Tsunamis and Seiches

Tsunamis are sea waves that are generated in response to large-magnitude earthquakes. When these waves reach shorelines, they sometimes produce coastal flooding. Seiches are the oscillation of large bodies of standing water, such as lakes, that can occur in response to ground shaking. Tsunamis and seiches do not pose hazards due to the inland location of the site and lack of nearby bodies of standing water.

Seismically Induced Settlement

Seismically induced settlement occurs most frequently in areas underlain by loose, granular sediments. Damage as a result of seismically induced settlement is most dramatic when differential settlement occurs in areas with large

variations in the thickness of underlying sediments. Settlement caused by ground shaking is often non-uniformly distributed, which can result in differential settlement.

A seismic settlement analysis was performed using LiquefyPro Version 5 (2015 Edition) for this project. A summary of the input data and the results of the seismic settlement analysis are provided in Appendix D.

Seismically Induced Flooding

According to Federal Emergency Management Agency (Flood Insurance Rate Map #06037C1670F and #06037C1665F, Effective date 9/26/2008), the site is located in an area of Flood Zone X, which is an area where the likelihood of flood hazards is considered minimal. In addition there are no water reservoirs in the vicinity of the site. Based on the aforementioned the potential for seismic induced flooding is unlikely.

Seismically Induced Landsliding

According to the California Geological Survey Seismic Hazard Zones Map of the El Monte Quadrangle (2017) the site does not lie in a landslide hazard zone. Since the site is relatively flat earthquake-induced landsliding does not appear to be a hazard to proposed development.

3.04 Liquefaction Screening Evaluation Results

Liquefaction describes a phenomenon where cyclic stresses, which are produced by earthquake-induced ground motions, create excess pore pressures in cohesionless soils. As a result, the soils may acquire a high degree of mobility, which can lead to lateral spreading, consolidation and settlement of loose sediments, ground oscillation, flow failure, loss of bearing strength, ground fissuring, sand boils, and other damaging deformations. This phenomenon occurs only below the water table, but after liquefaction has developed, it can propagate upward into overlying, non-saturated soil as excess pore water escapes. Descriptions of each of the phenomena associated with liquefaction are described below:

Research has shown that saturated, loose sands with a silt content less than about 25 percent are most susceptible to liquefaction, whereas other soil types are generally considered to have a low susceptibility. According to the California Geological Survey (CGS) Special Publication SP-117A (2008), "Guidelines for Evaluating and Mitigating Seismic Hazards in California," any materials with a PI > 12 and moisture content < 85% of the liquid limit were considered not subject to liquefaction. Liquefaction susceptibility is related to numerous factors, and the following conditions must exist for liquefaction to occur:

- Sediments must be relatively young in age and must not have developed large amounts of cementation
- Sediments must consist mainly of cohesionless sands and silts
- The sediment must not have a high relative density
- Free groundwater must exist in the sediment; and
- The site must be exposed to seismic events of a magnitude large enough to induce straining of soil particles

Static groundwater was not encountered in either borings drilled to a maximum depth of 50 feet. However, according to the California Division of Mines and Geology Seismic Hazard Zone Report for the El Monte Quadrangle (CDMG, 1998), the historical high groundwater table is approximately 5 feet below grade. Therefore, RMA

GeoScience considered the potential for groundwater to be at this depth below existing grade in the liquefaction screening evaluation.

For the PGA corresponding to two-thirds of the PGA_M and predominant earthquake magnitude corresponding to a 10% probability of exceedance in 50 years, potential seismic-induced settlements were determined when the safety factor was less than 1.1. Calculations of liquefaction potential, presented in Appendix D, indicate that there are discrete layers of sandy alluvial soils that will be susceptible to liquefaction during a design-level earthquake. The seismic settlement from Boring B-3 and B-6 are 2.47 inches and 3.23 inches, respectively.

3.05 Total and Differential Settlement

The above seismically induced settlements should be combined with the anticipated total static settlement in order to obtain an estimate of the amount of differential settlement that may affect the site. The maximum total static settlement is not expected to exceed ½ inch under the recommended bearing pressure.

We assume the seismic differential settlement is half of the total seismic settlement and static differential settlement is half of the total static settlement. Thus, total settlement (static and seismic) is expected to be less than 3.73 inches with differential settlement (static and seismic) of less than 1.87 inches in a 40 feet span.

3.06 Removals and Overexcavation

Upon demolition and removal of all existing site improvements, all vegetation, organic rich soil (soils containing more that 2 percent organics by weight), trash and debris should be cleared from the grading area and removed from the site. After the removal of deleterious materials, stripping of organic-rich soils, and removal of tree roots, the following removals and over-excavation must be done within the area of the limits of grading:

- All artificial fill soil should be removed within the limits of grading. The fill soil may be used for engineered fill provided it is free of trash and organic material. Within the building areas, removals are recommended to a minimum of five feet below existing grade or three feet below the bottom of planned footings, whichever is greater.
- Within the area of planned streets and all other areas where grading is planned, all artificial fill must be completely removed and the subgrade must be over-excavated at least 12 inches below the stripped surface or the finished subgrade surface, whichever is lower.

Following the over-excavation indicated above, a designated representative for the Project Geotechnical Engineer must review the exposed ground surface and determine if any additional over-excavation is required. The over-excavated ground surface in all areas determined to be satisfactory for the support of fills must be scarified to a minimum depth of 6 inches. Scarification should continue until the soils are broken down and free from lumps or clods and until the scarified zone is uniform. The moisture content of the scarified zone shall be adjusted to within 2% of the optimum moisture content. The scarified zone must then be uniformly compacted to at least 90% relative compaction

The above recommendations are based on the assumption that soils encountered during field exploration are representative of soils throughout the site. However, there can be unforeseen and unanticipated variations in soils between points of subsurface exploration. Hence, overexcavation depths must be verified, and adjusted if necessary, at the time of grading.

3.07 General Earthwork and Grading

All grading should be performed in accordance with the General Earthwork and Grading Specifications outlined in Appendix C, unless specifically revised or amended below. Recommendations contained in Appendix C are general specifications for typical grading projects and may not be entirely applicable to this project.

It is also recommended that all earthwork and grading be performed in accordance with the requirements of the lead agency.

3.08 Earthwork Shrinkage and Subsidence

The site is not located within a zone of land subsidence according to the United States Geological Survey California Water Science Center website. It is our opinion that the potential for land subsidence due to over pumping of groundwater or oil extraction is low.

Shrinkage is the decrease in volume of soil upon removal and recompaction expressed as a percentage of the original in-place volume. Subsidence occurs as natural ground is densified to receive fill. These factors account for changes in earth volumes that will occur during grading. Our estimates are as follows:

- Shrinkage factor = 5% to 15% for soil removed and replaced as compacted fill.
- Subsidence factor = 0.1 foot.

The degree to which fill soils are compacted and variations in the in-situ density of existing soils will influence earth volume changes. Consequently, some adjustments in grades near the completion of grading could be required to balance the earthwork.

3.09 Foundation

The expansion index results of the on-site soils had very low expansion potential. However, considering the total and differential settlements from static and seismic conditions, the site may be considered suitable for the support of the anticipated structures using mat foundation systems.

If mat foundations were used to support the proposed structures, an allowable soil bearing pressure of 3,000 psf are recommended under the proposed mat foundations. The total combined settlement (seismic plus static settlements) is 3.73 inches and the total combined differential settlement (seismic plus static) is 1.87 inches. The modulus of subgrade reaction shall be calculated as follows:

$$K = K_1 \left(\frac{B+1}{2B}\right)^2$$

Where k_1 = 150 pci, coefficient of subgrade reaction of foundations measuring 1 ft by 1 ft.

B = foundation width in ft.

A foundation design engineer experienced in the field of mat foundation design should undertake the design of the foundations. The designer should provide estimates of the anticipated deflection of the mat to the design architect and structural engineer for use in the design of the structure. If the anticipated design deflection exceeds that which the design architect and or structural engineer can accommodate then the slab should be re-designed by the

slab designer to reduce the total deflection.

3.10 Retaining Wall Foundations

Footings for retaining walls should be founded supported on 3 feet of compacted fill with a minimum depth of 12 inches and have a minimum width of 12 inches. Footings may be designed using the allowable bearing capacity of 1,500 psf and the same lateral resistance values recommended for building footings. However, when calculating passive resistance, the upper 6 inches of the footings should be ignored in areas where the footings will not be covered with concrete flatwork.

In view of the seismic setting, a nominal reinforcement consisting of at least two #4 bar placed within 3 inches of the top of footings and another two placed within 3 inches of the bottom of footings is recommended. Reinforcement of wide footings should be determined by the structural engineer who may also require heavier reinforcement.

3.11 Slab-On-Grade

Concrete floor slabs on grade with a minimum thickness of 4 inches are recommended for slabs on grade for the proposed structures for normal floor loading conditions. However, if heavy concentrated or moving loads are anticipated, slabs should be designed using a modulus of subgrade reaction (k) of 150 psi/in when soils are prepared in conformance with the grading recommendations contained within the report. Reinforcement of slabs on grading is not required to mitigate the expansive soils. Reinforcement may be specified by the structural engineer.

Concrete floor slabs on grade should be divided into squares or rectangles using weakened plane joints (contraction joints), each with maximum dimensions not exceeding 15 feet. Contraction joints should be made in accordance with American Concrete Institute (ACI) guidelines. If weakened plane joints are not used, then the slabs shall be reinforced with 6x6-10/10 welded wire fabric placed at mid-height of the slab.

Special care should be taken on floors slabs to be covered with thin-set tile or other inflexible coverings. These areas may be reinforced with 6x6-10/10 welded wire fabric placed at mid-height of the slab, to mitigate drying shrinkage cracks. Alternatively, inflexible flooring may be installed with unbonded fabric or liners to prevent reflection of slab cracks through the flooring.

A moisture vapor retarder/barrier is recommended beneath all slabs-on-grade that will be covered by moisture-sensitive flooring materials such as vinyl, linoleum, wood, carpet, rubber, rubber-backed carpet, tile, impermeable floor coatings, adhesives, or where moisture-sensitive equipment, products, or environments will exist. We recommend that design and construction of the vapor retarder or barrier conform to Section 1805 of the 2019 California Building Code (CBC) and pertinent sections of American Concrete Institute (ACI) guidance documents 302.1R-04, 302.2R-06 and 360R-10.

The moisture vapor retarder/barrier should consist of a minimum 10 mils thick polyethylene with a maximum perm rating of 0.3 in accordance with ASTM E 1745. Seams in the moisture vapor retarder/barrier should be overlapped no less than 6 inches or in accordance with the manufacturer's recommendations. Joints and penetrations should be sealed with the manufacturer's recommended adhesives, pressure-sensitive tape, or both. The contractor must avoid damaging or puncturing the vapor retarder/barrier and repair any punctures with additional polyethylene properly lapped and sealed.

ACI guidelines allow for the placement of moisture vapor retarder/barriers either directly beneath floor slabs or

below an intermediate granular soil layer.

Placing the moisture retarder/barrier directly beneath the floor slab will provide improved curing of the slab bottom and will eliminate potential problems caused by water being trapped in a granular fill layer. Concrete slabs poured directly on a vapor retarder/barrier can experience shrinkage cracking and curling due to differential rates of curing through the thickness of the slab. Therefore, for concrete placed directly on the vapor retarded, we recommend a maximum water cement ratio of 0.45 and the use of water-reducing admixtures to increase workability and decrease bleeding.

If granular soil is placed over the vapor retarder/barrier, we recommend that the layer be at least 2 inches thick in accordance with traditional practice in southern California. Granular fill should consist of clean fine graded materials with 10 to 30% passing the No. 100 sieve and free from clay or silt. The granular layer should be uniformly compacted and trimmed to provide the full design thickness of the proposed slab. The granular fill layer should not be left exposed to rain or other sources of water such as wet-grinding, power washing, pipe leaks or other processes, and should be dry at the time of concrete placement. Granular fill layers that become saturated should be removed and replaced prior to concrete placement.

An additional layer of sand may be placed beneath the vapor retarder/barrier at the developer's discretion to minimize the potential of the retarder/barrier being punctured by underlying soils.

3.12 Miscellaneous Concrete Flatwork

Miscellaneous concrete flatwork and walkways may be designed with a minimum thickness of 4 inches. Large slabs should be reinforced with a minimum of 6x6-10/10 welded wire mesh placed at mid-height in the slab. Control joints should be constructed to create squares or rectangles with a maximum spacing of 15 feet.

Walkways may be constructed without reinforcement. Walkways should be separated from foundations with a thick expansion joint filler. Control joints should be constructed into non-reinforced walkways at a maximum of 5 feet spacing.
The subgrade soils beneath all miscellaneous concrete flatwork should be compacted to a minimum of 95 percent relative compaction for a minimum depth of 12 inches. The geotechnical engineer should monitor the compaction of the subgrade soils and perform testing to verify that proper compaction has been obtained.

3.13 Footing Excavation and Slab Preparation

All footing excavations should be observed by the geotechnical consultant to verify that they have been excavated into competent soils. The foundation excavations should be observed prior to the placement of forms, reinforcement steel, or concrete. These excavations should be evenly trimmed and level. Prior to concrete placement, any loose or soft soils should be removed. Excavated soils should not be placed on slab or footing areas unless properly compacted.

Prior to the placement of the moisture barrier and sand, the subgrade soils underlying the slab should be observed by the geotechnical consultant to verify that all under-slab utility trenches have been properly backfilled and compacted, that no loose or soft soils are present, and that the slab subgrade has been properly compacted to a minimum of 95 percent relative compaction within the upper 12 inches.

Footings may experience and overall loss in bearing capacity or an increased potential to settle where located in

close proximity to existing or future utility trenches. Furthermore, stresses imposed by the footings on the utility lines may cause cracking, collapse and/or a loss of serviceability. To reduce this risk, footings should extend below a 1:1 plane projected upward from the closest bottom of the trench.

Subgrade soils beneath slabs on grade and walkways moist prior to the placement of concrete. The geotechnical consultant should verify that the appropriate moisture content has been achieved a maximum of 24 hours prior to the placement of concrete or moisture barriers.

3.14 Lateral Load Resistance

Lateral loads may be resisted by soil friction and the passive resistance of the soil. The following parameters are recommended.

- Passive Earth Pressure = 280 pcf (equivalent fluid weight).

  We recommend neglecting passive soil resistance from the upper foot of soil unless protected by a concrete slab or pavement.

- Coefficient of Friction (soil to footing) = 0.27
- Retaining structures should be designed to resist the following lateral active earth pressures:

Surface Slope of Retained Materials (Horizontal:Vertical)	Equivalent Fluid Weight (pcf)
Level	37
5:1	39
4:1	40
3:1	43
2:1	54

  These active earth pressures are only applicable if the retained earth is allowed to strain sufficiently to achieve the active state. The required minimum horizontal strain to achieve the active state is approximately 0.0025H. Retaining structures should be designed to resist an at-rest lateral earth pressure if this horizontal strain cannot be achieved.

- At-rest Lateral Earth Pressure = 57 pcf (equivalent fluid weight)

The lateral earth pressure due to earthquake motions for the retaining walls are calculated by using $PGA=S_{DS}/2.5=0.608g$ and $\Upsilon=130$ pcf for retaining wall dynamic load increment calculations. The point of application may vary between 0.37H to 0.40H.

- Basement (restrained) walls with level backfill:
  $P_{ae} = \frac{1}{2}\Upsilon H^2(0.68\ PGA/g) = 29\ H^2$

- Cantilever (unrestrained) walls with level backfill:
  $P_{ae} = \frac{1}{2}\Upsilon H^2(0.42\ PGA/g) = 18\ H^2$

- Cantilever (unrestrained) walls with no steeper than 2:1 slope:
  $P_{ae} = \frac{1}{2}\gamma H^2(0.70\ PGA/g) = 30\ H^2$

3.15 Cement Type and Corrosion Potential

A soluble sulfate test performed on a shallow sample of soil indicates that concrete at the subject site will have a negligible exposure to water-soluble sulfate in the soil. Our recommendations for concrete exposed to sulfate-containing soils are presented in the following table.

Recommendations for Concrete exposed to Sulfate-containing Soils

Sulfate Exposure	Water Soluble Sulfate (SO_4) in Soil (% by Weight)	Sulfate (SO_4) in Water (ppm)	Cement Type (ASTM C150)	Maximum Water-Cement Ratio (by Weight)	Minimum Compressive Strength (psi)
Negligible	0.00 - 0.10	0-150	--	--	2,500
Moderate	0.10 - 0.20	150-1,500	II	0.50	4,000
Severe	0.20 - 2.00	1,500-10,000	V	0.45	4,500
Very Severe	Over 2.00	Over 10,000	V plus pozzolan or slag	0.45	4,500

Use of alternate combinations of cementitious materials may be permitted if the combinations meet design recommendations contained in American Concrete Institute guideline ACI 318-11.

The soils were also tested for soil reactivity (pH) and electrical resistivity (ohm-cm). The test results indicate that the on-site soils have soil reactivity of 8.9 and 8.7 and electrical resistivity of 8,658 and 3,260 ohm-cm. A neutral or non-corrosive soil has a reactivity value ranging from 5.5 to 8.4. Generally, soils that could be considered moderately corrosive to ferrous metals have resistivity values of about 3,000 ohm-cm to 10,000 ohm-cm. Soils with resistivity values less than 3,000 ohm-cm can be considered corrosive and soils with resistivity values less than 1,000 ohm-cm can be considered extremely corrosive.

Based on our analysis, underlying onsite soils are corrosive to ferrous metals. Protection of buried pipes utilizing coatings on all underground pipes; clean backfills and a cathodic protection system can be effective in controlling corrosion. A qualified corrosion engineer may be consulted to further assess the corrosive properties of the soil.

3.16 Preliminary Pavement Sections

Based on the soil profiles at the subject project, a subgrade R-value of 30 has been used to develop the preliminary pavement sections given below. The structural section recommendations (AC over processed miscellaneous base materials (with a minimum R-value of 78)) given herein were developed using the procedures outlined in Chapter 630 of the California Highway Design Manual (Caltrans, 2012). This procedure uses the principle that the pavement structural section must be of adequate thickness to distribute the load from the design TI to the subgrade soils in such a manner that the stresses from the applied loads do not exceed the strength of the soil (R-value). We would

recommend the following preliminary structural sections:

ASPHALT SECTIONS

TRAFFIC INDEX	ASPHALT THICKNESS, IN.	BASE THICKNESS, IN.
4.5	3.0	5.0
5.0	3.0	6.0
6.0	4.0	7.0

At a minimum, the upper 12 inches of subgrade soils should be at or no more than 2% over optimum moisture content and compacted to a minimum of 90% relative compaction prior to placement of base. All aggregate base courses should also be at or no more than 2% over optimum moisture and compacted to a minimum of 95% relative compaction.

3.17 Utility Trench Backfill

The onsite fill soils will not be suitable for use as pipe bedding for buried utilities. All pipes should be bedded in a sand, gravel or crushed aggregate imported material complying with the requirements of the Standard Specifications for Public Works Construction (Greenbook) Section 306-1.2.1. Crushed rock products that do not contain appreciable fines should not be utilized as pipe bedding and/or backfill. Bedding materials should be densified to at least 90% relative compaction (ASTM D1557). The geotechnical consultant should review and approve of proposed bedding materials prior to use.

The on-site soils are expected to be suitable as trench backfill provided they are screened of organic matter, boulders and cobbles over 6 inches in diameter. Trench backfill should be densified to at least 90% relative compaction (ASTM D1557). On-site granular soils with a sand equivalent value of 15 or greater may be water densified initially per Greenbook Specifications. Supplemental mechanical compaction methods will be required to attain the required 90% relative compaction.

All utility trench backfill within street right of way, utility easements, under or adjacent to sidewalks, driveways, or building pads should be observed and tested by the geotechnical consultant to verify proper compaction. Trenches excavated adjacent to foundations should not extend within the footing influence zone defined as the area within a line projected at a 1:1 drawn from the bottom edge of the footing. Trenches crossing perpendicular to foundations should be excavated and backfilled prior to the construction of the foundations. The excavations should be backfilled in the presence of the geotechnical engineer and tested to verify adequate compaction beneath the proposed footing.

Cal/OSHA construction safety orders should be observed during all underground work.

3.18 Temporary Excavations

Based on the recommended removal depths as described in Section 3.06, temporary excavations within the limits of grading are expected to be 5 feet. Excavations may be cut vertically to a maximum height of 4 feet. Cuts above 4 feet may be laid back at a gradient of 1:1.

3.19 Drainage

Surface drainage should be directed away from the proposed structures into suitable drainage devices. Neither excess irrigation nor rainwater should be allowed to collect or pond against building foundations or within low-lying or level areas of the lot. Surface waters should be diverted away from the tops of slopes and prevented from draining over the top of slopes and down the slope face.

3.20 Plan Review

Once formal plans are prepared for the subject property, this office should review the plans from a geotechnical viewpoint, comment on changes from the plan used during preparation of this report and revise the recommendations of this report where necessary.

4.00 CLOSURE

This investigation was completed in accordance with generally accepted industry practice to provide recommendations for developing the property from a geotechnical perspective. Information presented in this report is based on research, field investigation, laboratory testing, and engineer judgment obtained from similar projects completed on nearby properties. This assessment is not, and should not be construed as, a warranty or guarantee concerning the geotechnical conditions which may affect the future development of the property. All discovered information has been disclosed and a good faith effort has been made to consult pertinent sources.

This study and report have been prepared on behalf and for the exclusive use of KB Home, and solely for use as a preliminary evaluation of the subject site. This report and its findings shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without prior written consent of RMA Geoscience, Inc. and KB Home. However, RMA Geoscience, Inc. acknowledges and agrees that the report may be conveyed to the design professionals for consideration in developing the property.

FIELD INVESTIGATION

APPENDIX A

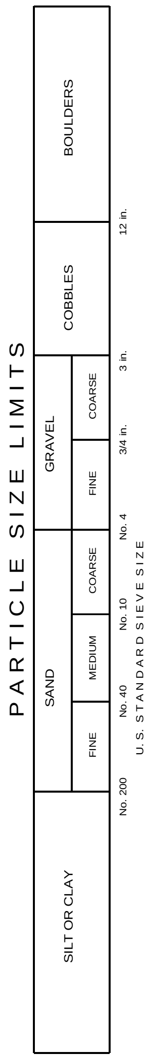
FIELD INVESTIGATION

A-1.00 FIELD EXPLORATION

A-1.01 Number of Borings and Test Pits

Our subsurface investigation consisted of seven (7) hollow stem boring auger to depths of up to 50 feet and nine (9) test pits t dug with a backhoe to a maximum depth of 17 feet.

A-1.02 Location of Boring and Test Pits



A Boring Location Map showing the approximate locations of the borings and test pits are presented as Plate 1.

A-1.03 Boring and Test Pit Logging

Logs of the borings and test pits were prepared by one of our staff and are attached in this appendix. The logs contain factual information and interpretation of subsurface conditions between samples. The strata indicated on these logs represent the approximate boundary between earth units and the transition may be gradual. The logs show subsurface conditions at the dates and locations indicated, and may not be representative of subsurface conditions at other locations and times.

Identification of the soils encountered during the subsurface exploration was made using the field identification procedure of the Unified Soils Classification System (ASTM D2488). A legend indicating the symbols and definitions used in this classification system and a legend defining the terms used in describing the relative compaction, consistency or firmness of the soil are attached in this appendix. Bag samples of the major earth units were obtained for laboratory inspection and testing.

RMA GeoScience
Every Project Matters | www.rmacompanies.com

MAJOR DIVISIONS			GROUP SYMBOLS	TYPICAL NAMES
COARSE GRAINED SOILS (More than 50% of material is LARGER than No. 200 sieve size)	GRAVELS (More than 50% of coarse fraction is LARGER than the No. 4 sieve size.	CLEAN GRAVELS (Little or no fines)	GW	Well graded gravel, gravel-sand mixtures. little or no fines.
			GP	Poorly graded gravel or gravel-sand mixtures, little or no fines.
		GRAVELS WITH FINES (Appreciable amt. of fines)	GM	Silty gravels, gravel-sand-silt mixtures.
			GC	Clayey gravels, gravel-sand-clay mixtures.
	SANDS (More than 50% of coarse fraction is SMALLER than the No. 4 sieve size)	CLEAN SANDS (Little or no fines)	SW	Well graded sands, gravelly sands, little or no fines.
			SP	Poorly graded sands or gravelly sands, little or no fines.
		SANDS WITH FINES (Appreciable amount of fines)	SM	Silty sands, sand-silt mixtures.
			SC	Clayey sands, sand-clay mixtures.
FINE GRAINED SOILS (More than 50% of material is SMALLER than No. 200 sieve size)	SILTS AND CLAYS (Liquid limit LESS than 50)		ML	Inorganic silts and very fine sands, rock flour silty or clayey fine sands or clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays.
			OL	Organic silts and organic silty clays of low plasticity.
	SILTS AND CLAYS (Liquid limit GREATER than 50)		MH	Inorganic silts, micaceous or diatamaceous fine sandy or silty soils, elastic silts.
			CH	Inorganic clays of high plasticity, fat clays.
			OH	Organic clays of medium to high plasticity, organic silts.
HIGHLY ORGANIC SOILS			Pt	Peat and other highly organic soils.

BOUNDARY CLASSIFICATIONS: Soils possessing characteristics of two groups are designated by combinations of group symbols.

UNIFIED SOIL CLASSIFICATION SYSTEM

I. SOIL STRENGTH/DENSITY

BASED ON STANDARD PENETRATION TESTS

Compactness of sand		Consistency of clay	
Penetration Resistance N (blows/Ft)	Compactness	Penetration Resistance N (blows/ft)	Consistency
0-4	Very Loose	<2	Very Soft
4-10	Loose	2-4	Soft
10-30	Medium Dense	4-8	Medium Stiff
30-50	Dense	8-15	Stiff
>50	Very Dense	15-30	Very Stiff
		>30	Hard

N = Number of blows of 140 lb. weight falling 30 in. to drive 2-in OD sampler 1 ft.

BASED ON RELATIVE COMPACTION

Compactness of sand		Consistency of clay	
% Compaction	Compactness	% Compaction	Consistency
<75	Loose	<80	Soft
75-83	Medium Dense	80-85	Medium Stiff
83-90	Dense	85-90	Stiff
>90	Very Dense	>90	Very Stiff

II. SOIL MOISTURE

Moisture of sands		Moisture of clays	
% Moisture	Description	% Moisture	Description
<5%	Dry	<12%	Dry
5-12%	Moist	12-20%	Moist
>12%	Very Moist	>20%	Very Moist, wet

APPENDIX B

LABORATORY TESTS

APPENDIX B

B-1.00 LABORATORY TESTS

B-1.01 Maximum Density

Maximum density - optimum moisture relationships for the major soil types encountered during the field exploration were performed in the laboratory using the standard procedures of ASTM D1557.

B-1.02 Particle Size Analysis

Particle size analysis was performed on a representative sample of the on-site soils in accordance with the standard test methods of the ASTM D422. The test results are included in this Appendix B.

B-1.03 Materials Finer than #200

Particle size analysis was performed on representative samples of the on-site soils in accordance with the standard test methods of the ASTM D1140. The test results are presented on the boring logs in Appendix A.

B-1.04 Expansion Tests

Expansion index tests were performed on representative samples of the major soil types encountered by the test methods outlined in ASTM D4829.

B-1.05 Soluble Sulfates

A test was performed on representative sample encountered during the investigation using the California Test Method 417.

B-1.06 Soil Reactivity (pH) and Minimum Resistivity

A near-surface soil samples were tested for soil reactivity (pH) and minimum electrical resistivity using California Test Method 643. The pH measurement determines the degree of acidity or alkalinity in the soils. The minimum resistivity is used as an indicator of how corrosive the soil is relative to buried metallic items.

B-1.07 Moisture Determination

Moisture content of the soil samples was performed in accordance to standard method for determination of water content of soil by drying oven, ASTM D2216. The mass of material remaining after oven drying is used as the mass of the solid particles.

B-1.08 Density of Split-Barrel Samples

The density of ring and tube samples, which were obtained using a split-barrel sampler, were determined in accordance with ASTM D2937. The results of these tests are provided on the boring logs in Appendix A.

B-1.09 Atterberg Limits

The liquid limit, plastic limit, and the plasticity index of the major soil types encountered in the test holes were determined using the standard test methods of ASTM D4318.

B-1.10 Direct Shear

Direct shear test was performed on a representative sample of the major soil types encountered in the test holes

using the standard test method of ASTM D3080 (consolidated and drained). Test was performed on remolded samples. Remolded samples were tested at 90 percent relative compaction. The test results are included in this Appendix B.

Shear tests were performed on a direct shear machine of the strain-controlled type. To simulate possible adverse field conditions, the samples were saturated prior to shearing. Several samples were sheared at varying normal loads and the results plotted to establish the angle of the internal friction and cohesion of the tested samples.

B-1.11 Test Results

Test results for all laboratory tests performed on the subject project are presented in this appendix. For a sample-by-sample description, see the logs presented in Appendix A.

MAXIMUM DENSITY - OPTIMUM MOISTURE
(Test Method: ASTM D1557)

Sample Number	Optimum Moisture (Percent)	Maximum Density (lbs/ft^3)
B1 @ 0-5 ft	9.7	120.1
B2 @ 0-5 ft	13.0	122.0
B3 @ 0-5 ft	10.2	121.9
B5 @ 0-5 ft	12.7	116.5

EXPANSION INDEX
(Test Method: ASTM D4829)

Sample Number	Expansion Index	Classification
B-1 @ 0-5 ft	0	Very Low
B-5 @ 0-5 ft	0	Very Low

SOLUBLE SULFATES
(California Test Methods: 417 & 422)

Sample Number	Soluble Sulfate (ppm)	Chloride Content (ppm)
B-2 @ 0-5 ft	46	36
B-4 @ 0-5 ft	61	26

SOIL REACTIVITY (pH) AND MINIMUM RESISTIVITY

(California Test Method: 643)

Sample Number	pH	Minimum Resistivity (Ohm-cm)
B-2 @ 0-5 ft	8.9	8658
B-4 @ 0-5 ft	8.7	3260

ATTERBERG LIMITS

(Test Method: ASTM D4318)

Sample Number	Liquid Limit (Percent)	Plastic Limit (Percent)	Plasticity Index (Percent)	Water Content (Percent)
B-3 @ 15 ft	42	37	5	12.5
B-6 @ 12.5 ft	61	54	7	54.5

APPENDIX C

GENERAL EARTHWORK
AND
GRADING SPECIFICATIONS

GENERAL EARTHWORK AND GRADING SPECIFICATIONS

C-1.00 GENERAL DESCRIPTION

C-1.01 Introduction

These specifications present our general recommendations for earthwork and grading as shown on the approved grading plans for the subject project. These specifications shall cover all clearing and grubbing, removal of existing structures, preparation of land to be filled, filling of the land, spreading, compaction and control of the fill, and all subsidiary work necessary to complete the grading of the filled areas to conform with the lines, grades and slopes as shown on the approved plans.

The recommendations contained in the geotechnical report of which these general specifications are a part of shall supersede the provisions contained hereinafter in case of conflict.

C-1.02 Laboratory Standard and Field Test Methods

The laboratory standard used to establish the maximum density and optimum moisture shall be ASTM D1557.

The insitu density of earth materials (field compaction tests) shall be determined by the sand cone method (ASTM D1556), direct transmission nuclear method (ASTM D2922) or other test methods as considered appropriate by the geotechnical consultant.

Relative compaction is defined, for purposes of these specifications, as the ratio of the in-place density to the maximum density as determined in the previously mentioned laboratory standard.

C-2.00 Clearing

C-2.01 Surface Clearing

All structures marked for removal, timber, logs, trees, brush and other rubbish shall be removed and disposed of off the site. Any trees to be removed shall be pulled in such a manner so as to remove as much of the root system as possible.

C-2.02 Subsurface Removals

A thorough search should be made for possible underground storage tanks and/or septic tanks and cesspools. If found, tanks should be removed and cesspools pumped dry.

Any concrete irrigation lines shall be crushed in place and all metal underground lines shall be removed from the site.

C-2.03 Backfill of Cavities

All cavities created or exposed during clearing and grubbing operations or by previous use of the site shall be cleared of deleterious material and backfilled with native soils or other materials approved by the soil engineer. Said backfill shall be compacted to a minimum of 90% relative compaction.

C-3.00 ORIGINAL GROUND PREPARATION

C-3.01 Stripping of Vegetation

After the site has been properly cleared, all vegetation and topsoil containing the root systems of former vegetation shall be stripped from areas to be graded. Materials removed in this stripping process may be used as fill in areas designated by the soil engineer, provided the vegetation is mixed with a sufficient amount of soil to assure that no appreciable settlement or other detriment will occur due to decaying of the organic matter. Soil materials containing more than 3% organics shall not be used as structural fill.

C-3.02 Removals of Non-Engineered Fills

Any non-engineered fills encountered during grading shall be completely removed and the underlying ground shall be prepared in accordance to the recommendations for original ground preparation contained in this section. After cleansing of any organic matter the fill material may be used for engineered fill.

C-3.03 Overexcavation of Fill Areas

The existing ground in all areas determined to be satisfactory for the support of fills shall be scarified to a minimum depth of 6 inches. Scarification shall continue until the soils are broken down and free from lumps or clods and until the scarified zone is uniform. The moisture content of the scarified zone shall be adjusted to within 2% of optimum moisture. The scarified zone shall then be uniformly compacted to 90% relative compaction.

Where fill material is to be placed on ground with slopes steeper than 5:1 (H:V) the sloping ground shall be benched. The lowermost bench shall be a minimum of 15 feet wide, shall be a minimum of 2 feet deep, and shall expose firm material as determined by the geotechnical consultant. Other benches shall be excavated to firm material as determined by the geotechnical consultant and shall have a minimum width of 4 feet.

Existing ground that is determined to be unsatisfactory for the support of fills shall be overexcavated in accordance to the recommendations contained in the geotechnical report of which these general specifications are a part.

C-4.00 FILL MATERIALS

C-4.01 General

Materials for the fill shall be free from vegetable matter and other deleterious substances, shall not contain rocks or lumps of a greater dimension than is recommended by the geotechnical consultant, and shall be approved by the geotechnical consultant. Soils of poor gradation, expansion, or strength properties shall be placed in areas designated by the geotechnical consultant or shall be mixed with other soils providing satisfactory fill material.

C-4.02 Oversize Material

Oversize material, rock, or other irreducible material with a maximum dimension greater than 12 inches shall not be placed in fills, unless the location, materials, and disposal methods are specifically approved by the geotechnical consultant. Oversize material shall be placed in such a manner that nesting of oversize material does not occur and in such a manner that the oversize material is completely surrounded by fill material compacted to a minimum of

90% relative compaction. Oversize material shall not be placed within 10 feet of finished grade without the approval of the geotechnical consultant.

C-4.03 Import

Material imported to the site shall conform to the requirements of Section 4.01 of these specifications. Potential import material shall be approved by the geotechnical consultant prior to importation to the subject site.

C-5.00 Placing and Spreading of Fill

C-5.01 Fill Lifts

The selected fill material shall be placed in nearly horizontal layers which when compacted will not exceed approximately 6 inches in thickness. Thicker lifts may be placed if testing indicates the compaction procedures are such that the required compaction is being achieved and the geotechnical consultant approves their use.
Each layer shall be spread evenly and shall be thoroughly blade mixed during the spreading to insure uniformity of material in each layer.

C-5.02 Fill Moisture

When the moisture content of the fill material is below that recommended by the soils engineer, water shall then be added until he moisture content is as specified to assure thorough bonding during the compacting process.

When the moisture content of the fill material is above that recommended by the soils engineer, the fill material shall be aerated by blading or other satisfactory methods until the moisture content is as specified.

C-5.03 Fill Compaction

After each layer has been placed, mixed, and spread evenly, it shall be thoroughly compacted to not less than 90% relative compaction. Compaction shall be by sheepsfoot rollers, multiple-wheel pneumatic tired rollers, or other types approved by the soil engineer.

Rolling shall be accomplished while the fill material is at the specified moisture content. Rolling of each layer shall be continuous over its entire area and the roller shall make sufficient trips to insure that the desired density has been obtained.

C-5.04 Fill Slopes

Fill slopes shall be compacted by means of sheepsfoot rollers or other suitable equipment. Compacting of the slopes may be done progressively in increments of 3 to 4 feet in fill height. At the completion of grading, the slope face shall be compacted to a minimum of 90% relative compaction. This may require track rolling or rolling with a grid roller attached to a tractor mounted side-boom.

Slopes may be over filled and cut back in such a manner that the exposed slope faces are compacted to a minimum of 90% relative compaction.

The fill operation shall be continued in six inch (6") compacted layers, or as specified above, until the fill has been brought to the finished slopes and grades as shown on the accepted plans.

C-5.05 Compaction Testing

Field density tests shall be made by the geotechnical consultant of the compaction of each layer of fill. Density tests shall be made at locations selected by the geotechnical consultant.

Frequency of field density tests shall be not less than one test for each 2.0 feet of fill height and at least every one thousand cubic yards of fill. Where fill slopes exceed four feet in height their finished faces shall be tested at a frequency of one test for each 1000 square feet of slope face.

Where sheepsfoot rollers are used, the soil may be disturbed to a depth of several inches. Density reading shall be taken in the compacted material below the disturbed surface. When these readings indicate that the density of any layer of fill or portion thereof is below the required density, the particular layer or portion shall be reworked until the required density has been obtained.

C-6.00 SUBDRAINS

C-6.01 Subdrain Material

Subdrains shall be constructed of a minimum 4-inch diameter pipe encased in a suitable filter material. The subdrain pipe shall be Schedule 40 Acrylonitrile Butadiene Styrene (ABS) or Schedule 40 Polyvinyl Chloride Plastic (PVC) pipe or approved equivalent. Subdrain pipe shall be installed with perforations down. Filter material shall consist of 3/4" to 1 1/2" clean gravel wrapped in an envelope of filter fabric consisting of Mirafi 140N or approved equivalent.

C-6.02 Subdrain Installation

Subdrain systems, if required, shall be installed in approved ground to conform the approximate alignment and details shown on the plans or herein. The subdrain locations shall not be changed or modified without the approval of the geotechnical consultant. The geotechnical consultant may recommend and direct changes in the subdrain line, grade or material upon approval by the design civil engineer and the appropriate governmental agencies.

C-7.00 EXCAVATIONS

C-7.01 General

Excavations and cut slopes shall be examined by the geotechnical consultant. If determined necessary by the geotechnical consultant, further excavation or overexcavation and refilling of overexcavated areas shall be performed, and/or remedial grading of cut slopes shall be performed.

C-7.02 Fill-Over-Cut Slopes

Where fill-over-cut slopes are to be graded the cut portion of the slope shall be made and approved by the geotechnical consultant prior to placement of materials for construction of the fill portion of the slope.

C-8.00 Trench Backfill

C-8.01 General

Trench backfill within street right of ways shall be compacted to 90% relative compaction as determined by the ASTM D1557 test method. Backfill may be jetted as a means of initial compaction; however, mechanical compaction will be required to obtain the required percentage of relative compaction. If trenches are jetted, there must be a suitable delay for drainage of excess water before mechanical compaction is applied.

C-9.00 Seasonal Limits

C-9.01 General

No fill material shall be placed, spread or rolled while it is frozen or thawing or during unfavorable weather conditions. When the work is interrupted by heavy rain, fill operations shall not be resumed until field tests by the soils engineer indicate that the moisture content and density of the fill are as previously specified.

C-10.00 Supervision

C-10.01 Prior to Grading

The site shall be observed by the geotechnical consultant upon completion of clearing and grubbing, prior to the preparation of any original ground for preparation of fill.

The supervisor of the grading contractor and the field representative of the geotechnical consultant shall have a meeting and discuss the geotechnical aspects of the earthwork prior to commencement of grading.

C-10.02 During Grading

Site preparation of all areas to receive fill shall be tested and approved by the geotechnical consultant prior to the placement of any fill.

The geotechnical consultant or his representative shall observe the fill and compaction operations so that he can provide an opinion regarding the conformance of the work to the recommendations

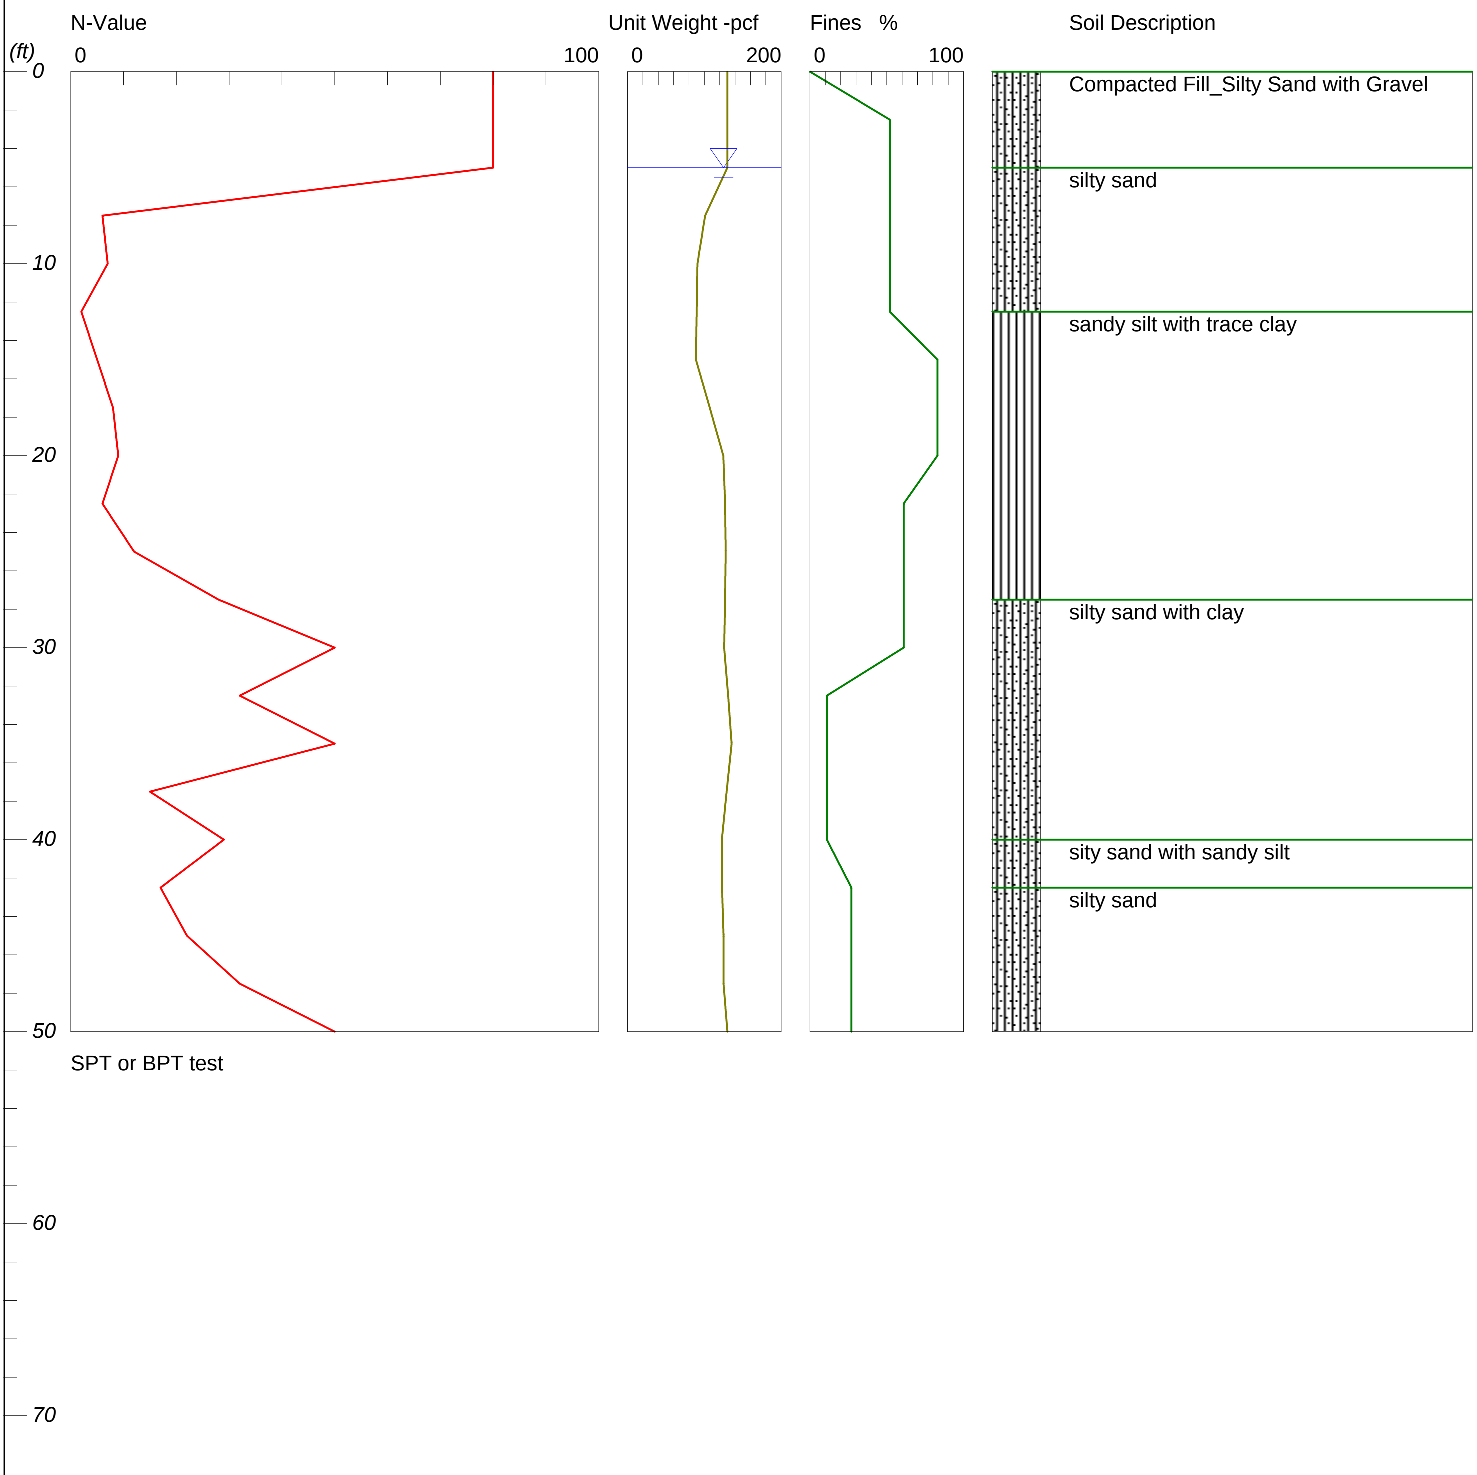
* F.S.<1, Liquefaction Potential Zone
(F.S. is limited to 5, CRR is limited to 2, CSR is limited to 2)

Units: Unit: qc, fs, Stress or Pressure = atm (1.0581tsf); Unit Weight = pcf; Depth = ft; Settlement = in.

---

1 atm (atmosphere) = 1 tsf (ton/ft2)



CRRm	Cyclic resistance ratio from soils
CSRsf	Cyclic stress ratio induced by a given earthquake (with user request factor of safety)
F.S.	Factor of Safety against liquefaction, F.S.=CRRm/CSRsf
S_sat	Settlement from saturated sands
S_dry	Settlement from Unsaturated Sands
S_all	Total Settlement from Saturated and Unsaturated Sands
NoLiq	No-Liquefy Soils

        Subtitle:  20G-0418-0

        Surface Elev.=244
        Hole No.=B-6
        Depth of Hole= 50.00 ft
        Water Table during Earthquake= 5.00 ft
        Water Table during In-Situ Testing= 60.00 ft
        Max. Acceleration= 0.66 g
        Earthquake Magnitude= 6.81

 Input Data:
        Surface Elev.=244
        Hole No.=B-6
        Depth of Hole=50.00 ft
        Water Table during Earthquake= 5.00 ft
        Water Table during In-Situ Testing= 60.00 ft
        Max. Acceleration=0.66 g
        Earthquake Magnitude=6.81
        No-Liquefiable Soils:   Based on Analysis

        1. SPT or BPT Calculation.
        2. Settlement Analysis Method: Tokimatsu, M-correction
        3. Fines Correction for Liquefaction: Modify Stark/Olson
        4. Fine Correction for Settlement: During Liquefaction*
        5. Settlement Calculation in: All zones*
        6. Hammer Energy Ratio,                                    Ce = 1.25
        7. Borehole Diameter,                                          Cb= 1.15
        8. Sampling Method,                                           Cs= 1.2
        9. User request factor of safety (apply to CSR) ,   User= 1.1
           Plot one CSR curve (fs1=User)
        10. Use Curve Smoothing: Yes*
        * Recommended Options

        In-Situ Test Data:

Appendix H Noise Analysis

Appendix

This page intentionally left blank.

Fundamentals of Noise

NOISE

Noise is most often defined as unwanted sound; whether it is loud, unpleasant, unexpected, or otherwise undesirable. Although sound can be easily measured, the perception of noise and the physical response to sound complicate the analysis of its impact on people. People judge the relative magnitude of sound sensation in subjective terms such as "noisiness" or "loudness."

Noise Descriptors

The following are brief definitions of terminology used in this chapter:

- **Sound.** A disturbance created by a vibrating object, which, when transmitted by pressure waves through a medium such as air, is capable of being detected by a receiving mechanism, such as the human ear or a microphone.

- **Noise.** Sound that is loud, unpleasant, unexpected, or otherwise undesirable.

- **Decibel (dB).** A unitless measure of sound, expressed on a logarithmic scale and with respect to a defined reference sound pressure. The standard reference pressure is 20 micropascals (20 μPa).

- **Vibration Decibel (VdB).** A unitless measure of vibration, expressed on a logarithmic scale and with respect to a defined reference vibration velocity. In the U.S., the standard reference velocity is 1 micro-inch per second ($1x10^{-6}$ in/sec).

- **A-Weighted Decibel (dBA).** An overall frequency-weighted sound level in decibels that approximates the frequency response of the human ear.

- **Equivalent Continuous Noise Level (L_{eq}); also called the Energy-Equivalent Noise Level.** The value of an equivalent, steady sound level which, in a stated time period (often over an hour) and at a stated location, has the same A-weighted sound energy as the time-varying sound. Thus, the L_{eq} metric is a single numerical value that represents the equivalent amount of variable sound energy received by a receptor over the specified duration.

- **Statistical Sound Level (L_n).** The sound level that is exceeded "n" percent of time during a given sample period. For example, the L_{50} level is the statistical indicator of the time-varying noise signal that is exceeded 50 percent of the time (during each sampling period); that is, half of the sampling time, the changing noise levels are above this value and half of the time they are below it. This is called the "median sound level." The L_{10} level, likewise, is the value that is exceeded 10 percent of the time (i.e., near the maximum) and this is often known as the "intrusive sound level." The L_{90} is the sound level exceeded 90 percent of the time and is often considered the "effective background level" or "residual noise level."

- **Maximum Sound Level (L_{max}).** The highest RMS sound level measured during the measurement period.
- **Root Mean Square Sound Level (RMS).** The square root of the average of the square of the sound pressure over the measurement period.
- **Day-Night Sound Level (L_{dn} or DNL).** The energy-average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the sound levels occurring during the period from 10:00 PM to 7:00 AM.
- **Community Noise Equivalent Level (CNEL).** The energy average of the A-weighted sound levels occurring during a 24-hour period, with 5 dB added from 7:00 PM to 10:00 PM and 10 dB from 10:00 PM to 7:00 AM. NOTE: For general community/environmental noise, CNEL and L_{dn} values rarely differ by more than 1 dB (with the CNEL being only slightly more restrictive – that is, higher than the L_{dn} value). As a matter of practice, L_{dn} and CNEL values are interchangeable and are treated as equivalent in this assessment.
- **Peak Particle Velocity (PPV).** The peak rate of speed at which soil particles move (e.g., inches per second) due to ground vibration.
- **Sensitive Receptor.** Noise- and vibration-sensitive receptors include land uses where quiet environments are necessary for enjoyment and public health and safety. Residences, schools, motels and hotels, libraries, religious institutions, hospitals, and nursing homes are examples.

Characteristics of Sound

When an object vibrates, it radiates part of its energy in the form of a pressure wave. Sound is that pressure wave transmitted through the air. Technically, airborne sound is a rapid fluctuation or oscillation of air pressure above and below atmospheric pressure that creates sound waves.

Sound can be described in terms of amplitude (loudness), frequency (pitch), or duration (time). Loudness or amplitude is measured in dB, frequency or pitch is measured in Hertz [Hz] or cycles per second, and duration or time variations is measured in seconds or minutes.

Amplitude

Unlike linear units such as inches or pounds, decibels are measured on a logarithmic scale. Because of the physical characteristics of noise transmission and perception, the relative loudness of sound does not closely match the actual amounts of sound energy. Table 1 presents the subjective effect of changes in sound pressure levels. Ambient sounds generally range from 30 dBA (very quiet) to 100 dBA (very loud). Changes of 1 to 3 dB are detectable under quiet, controlled conditions, and changes of less than 1 dB are usually not discernible (even under ideal conditions). A 3 dB change in noise levels is considered the minimum change that is detectable with human hearing in outside environments. A change of 5 dB is readily discernible to most people in an exterior environment, and a 10 dB change is perceived as a doubling (or halving) of the sound.

Table 1 Noise Perceptibility

Change in dB	Noise Level

± 3 dB	Barely perceptible increase
± 5 dB	Readily perceptible increase
± 10 dB	Twice or half as loud
± 20 dB	Four times or one-quarter as loud

Source: California Department of Transportation (Caltrans). 2013, September. Technical Noise Supplement ("TeNS").

Frequency

The human ear is not equally sensitive to all frequencies. Sound waves below 16 Hz are not heard at all, but are "felt" more as a vibration. Similarly, though people with extremely sensitive hearing can hear sounds as high as 20,000 Hz, most people cannot hear above 15,000 Hz. In all cases, hearing acuity falls off rapidly above about 10,000 Hz and below about 200 Hz.

When describing sound and its effect on a human population, A-weighted (dBA) sound levels are typically used to approximate the response of the human ear. The A-weighted noise level has been found to correlate well with people's judgments of the "noisiness" of different sounds and has been used for many years as a measure of community and industrial noise. Although the A-weighted scale and the energy-equivalent metric are commonly used to quantify the range of human response to individual events or general community sound levels, the degree of annoyance or other response also depends on several other perceptibility factors, including:

- Ambient (background) sound level
- General nature of the existing conditions (e.g., quiet rural or busy urban)
- Difference between the magnitude of the sound event level and the ambient condition
- Duration of the sound event
- Number of event occurrences and their repetitiveness
- Time of day that the event occurs

Duration

Time variation in noise exposure is typically expressed in terms of a steady-state energy level equal to the energy content of the time varying period (called L_{eq}), or alternately, as a statistical description of the sound level that is exceeded over some fraction of a given observation period. For example, the L_{50} noise level represents the noise level that is exceeded 50 percent of the time; half the time the noise level exceeds this level and half the time the noise level is less than this level. This level is also representative of the level that is exceeded 30 minutes in an hour. Similarly, the L_2, L_8 and L_{25} values represent the noise levels that are exceeded 2, 8, and 25 percent of the time or 1, 5, and 15 minutes per hour, respectively. These "n" values are typically used to demonstrate compliance for stationary noise sources with many cities' noise ordinances. Other values typically noted during a noise survey are the L_{min} and L_{max}. These values represent the minimum and maximum root-mean-square noise levels obtained over the measurement period, respectively.

Because community receptors are more sensitive to unwanted noise intrusion during the evening and at night, state law and many local jurisdictions use an adjusted 24-hour noise descriptor called the Community Noise Equivalent Level (CNEL) or Day-Night Noise Level (L_{dn}). The CNEL descriptor requires that an artificial increment (or "penalty") of 5 dBA be added to the actual noise level for the hours from 7:00 PM to 10:00 PM and 10 dBA for the hours from 10:00 PM to 7:00 AM. The L_{dn} descriptor uses the same methodology

except that there is no artificial increment added to the hours between 7:00 PM and 10:00 PM. Both descriptors give roughly the same 24-hour level, with the CNEL being only slightly more restrictive (i.e., higher). The CNEL or L_{dn} metrics are commonly applied to the assessment of roadway and airport-related noise sources.

Sound Propagation

Sound dissipates exponentially with distance from the noise source. This phenomenon is known as "spreading loss." For a single-point source, sound levels decrease by approximately 6 dB for each doubling of distance from the source (conservatively neglecting ground attenuation effects, air absorption factors, and barrier shielding). For example, if a backhoe at 50 feet generates 84 dBA, at 100 feet the noise level would be 79 dBA, and at 200 feet it would be 73 dBA. This drop-off rate is appropriate for noise generated by on-site operations from stationary equipment or activity at a project site. If noise is produced by a line source, such as highway traffic, the sound decreases by 3 dB for each doubling of distance over a reflective ("hard site") surface such as concrete or asphalt. Line source noise in a relatively flat environment with ground-level absorptive vegetation decreases by an additional 1.5 dB for each doubling of distance.

Psychological and Physiological Effects of Noise

Physical damage to human hearing begins at prolonged exposure to noise levels higher than 85 dBA. Exposure to high noise levels affects the entire system, with prolonged noise exposure in excess of 75 dBA increasing body tensions, thereby affecting blood pressure and functions of the heart and the nervous system. Extended periods of noise exposure above 90 dBA results in permanent cell damage, which is the main driver for employee hearing protection regulations in the workplace. For community environments, the ambient or background noise problem is widespread, through generally worse in urban areas than in outlying, less-developed areas. Elevated ambient noise levels can result in noise interference (e.g., speech interruption/masking, sleep disturbance, disturbance of concentration) and cause annoyance. Since most people do not routinely work with decibels or A-weighted sound levels, it is often difficult to appreciate what a given sound pressure level number means. To help relate noise level values to common experience, Table 2 shows typical noise levels from familiar sources.

Table 2 Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
Onset of physical discomfort	120+	
	110	Rock Band (near amplification system)
Jet Flyover at 1,000 feet		
	100	
Gas Lawn Mower at three feet		
	90	
Diesel Truck at 50 feet, at 50 mph		Food Blender at 3 feet
	80	Garbage Disposal at 3 feet
Noisy Urban Area, Daytime		
	70	Vacuum Cleaner at 10 feet
Commercial Area		Normal speech at 3 feet
Heavy Traffic at 300 feet	60

Vibration Fundamentals

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Vibration is normally associated with activities stemming from operations of railroads or vibration-intensive stationary sources, but can also be associated with construction equipment such as jackhammers, pile drivers, and hydraulic hammers. As with noise, vibration can be described by both its amplitude and frequency. Vibration displacement is the distance that a point on a surface moves away from its original static position; velocity is the instantaneous speed that a point on a surface moves; and acceleration is the rate of change of the speed. Each of these descriptors can be used to correlate vibration to human response, building damage, and acceptable equipment vibration levels. During construction, the operation of construction equipment can cause groundborne vibration. During the operational phase of a project, receptors may be subject to levels of vibration that can cause annoyance due to noise generated from vibration of a structure or items within a structure.

Vibration amplitudes are usually described in terms of either the peak particle velocity (PPV) or the root mean square (RMS) velocity. PPV is the maximum instantaneous peak of the vibration signal and RMS is the

square root of the average of the squared amplitude of the signal. PPV is more appropriate for evaluating potential building damage and RMS is typically more suitable for evaluating human response.

As with airborne sound, annoyance with vibrational energy is a subjective measure, depending on the level of activity and the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Persons accustomed to elevated ambient vibration levels, such as in an urban environment, may tolerate higher vibration levels. Table 3 displays the human response and the effects on buildings resulting from continuous vibration (in terms of various levels of PPV).

Table 3 Human Reaction to Typical Vibration Levels

Vibration Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.006–0.019	Threshold of perception, possibility of intrusion	Vibrations unlikely to cause damage of any type
0.08	Vibrations readily perceptible	Recommended upper level of vibration to which ruins and ancient monuments should be subjected
0.10	Level at which continuous vibration begins to annoy people	Virtually no risk of "architectural" (i.e. not structural) damage to normal buildings
0.20	Vibrations annoying to people in buildings	Threshold at which there is a risk to "architectural" damage to normal dwelling – houses with plastered walls and ceilings
0.4–0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

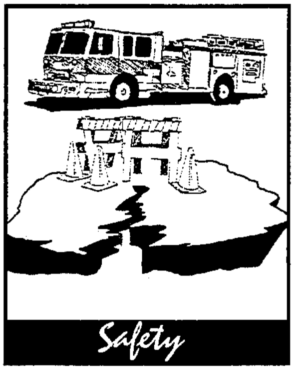
LOCAL REGULATIONS AND STANDARDS

PUBLIC SAFETY

ELEMENT



CONTENTS

LIST OF TABLES

LIST OF FIGURES

OVERVIEW OF THE ELEMENT

Purpose

The Public Safety Element sets forth goals and policies focused toward enhancing the quality of life in South El Monte by providing a safe and relatively quiet environment for all community members. The Public Safety Element addresses natural and human-induced hazards that have the potential to impact the community, including hazards associated with excessive noise.

Natural hazards of concern in the City include geologic and seismic disasters such as earthquakes and their related effects, as well as flood hazards. Because South El Monte lies within a densely populated urban environment, future development requires careful consideration of geologic conditions and earthquake activity to ensure that risk to life and property are minimized. Planning for natural disasters heightens the community's ability to respond to an emergency.

Human-induced hazards present in the community are limited to urban fires, excessive noise, crime, and hazardous material accidents, which have the potential to cause serious personal injury and property damage. The Public Safety Element identifies the risks associated with these hazards, and outlines goals and policies that address safety and noise problems in the community. A coordinated planning process that considers effects of certain land uses on surrounding properties works toward ensuring public safety.

The goals presented in this Element focus on creating a safe environment, planning for all types of disasters, incorporating defensible designs for crime prevention, and reducing the potential for personal injury and property damage arising from natural and human-induced hazards.

Important Terms and Concepts

Describing some of the public safety issues addressed in this element requires use of certain technical terms and planning concepts not used in everyday conversation. The definitions below highlight the key terms used.

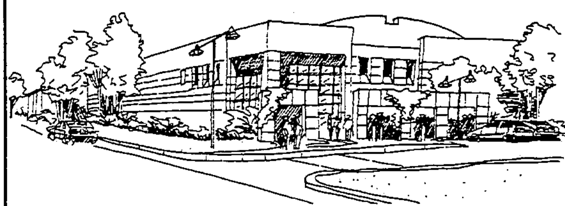
Earthquake Magnitude: An earthquake's magnitude is based on the size of the earthquake's seismic waves recorded on a seismogram. Magnitude of an earthquake is different from an earthquake's intensity, which is the effect of an earthquake on structures and people. Magnitude generally is rated and expressed using the Richter scale, which is a logarithmic scale. The amount of energy released, for example, from a 6.0 earthquake is 10 times greater than that associated with a 5.0 event. A large earthquake is considered to have a magnitude of 7.0 or greater. For purposes of comparison,

the 1987 Whittier earthquake registered a 5.9 magnitude, while the 1994 Northridge temblor was measured at 6.7.

100-year Flood: A 100-year flood event is a flood event that has a probability of occurring once every 100 years, or that has a 1-in-100 chance of occurring in a given year. The 100-year flood is not necessarily the greatest flood that could possibly occur in an area. Flooding from normal winter storms, when storm drain systems are filled to capacity or are clogged with debris, has the potential to be as disastrous as the 100-year flood.

Floodplain areas are mapped by the Federal Emergency Management Agency as part of the National Flood Insurance Program. Flood Insurance Rate Maps categorize flood prone areas into flood zones, including the 100-year and 500-year flood zones.

Noise Standards: Noise is generally defined as unwanted or intrusive sound. Because noise consists of pitch, loudness, and duration, it is difficult to describe noise with a single unit of measure. The A-weighted decibel scale (dBA) is used to describe the loudness of a sound, or noise environment.



Federal and state agencies have established noise and land use compatibility guidelines that use averaging approaches to noise measurement. Two measurement scales commonly used in California are the Community Noise Equivalent Level (CNEL) and the day-night level (L_{dn}). In order to account for increased human sensitivity at night, the CNEL level includes a five-decibel penalty on noise during the 7:00 p.m. - 10:00 p.m. time period and a ten-decibel penalty on noise during the 10:00 p.m. - 7:00 a.m. time period. The L_{dn} level includes only the ten decibel weighting for late-night noise. These values are nearly identical for all but unusual noise sources.

The Federal and State guidelines established for noise/land use compatibility are all based upon cumulative noise criteria such as L_{eq} (equivalent noise level), CNEL, or L_{dn}. The State Department of Housing and Community Development regulates noise levels in residential areas, requiring that sufficient insulation be provided to reduce interior ambient noise levels to 45 dBA CNEL.

Defensible Space: Defensible space is a design concept that promotes site planning and building design features aimed toward preventing safety and security problems. Defensible spaces are areas that are highly visible and well lighted to deter vandals and criminals. Defensible design can be incorporated into both industrial and commercial development, as well as housing.

The illustrations on the following page show typical design standards that can promote public safety. Defensible design features that can be incorporated into nonresidential development include the following:

- Well-lighted parking lots and driveways.
- Walkways that are well defined and connected to a particular building.
- Gates that help transition visitors and employees from the parking lot or street to the interior of the building.
- Exterior areas that are visible from the surrounding structures and businesses.

Defensible design for commercial and industrial developments

Residential defensible design features include the following:

- Well-lighted driveways and parking areas.
- Walkways that are well defined and connected to a particular home or property.
- Gates that help transition visitors and residents from the driveway or street to the interior of the home.
- Entrances that are visible from the street and surrounding homes.
- Visible common recreation areas.

Defensible design for residential uses

Related Plans and Programs

Other City and regional plans and programs related to the public safety and emergency response planning include the City's *Emergency Operations Manual,* the Federal Emergency Management Agency's flood insurance program, and mutual aid agreements that South El Monte maintains with surrounding jurisdictions. These and other safety-related programs are described below. Related programs are important to consider to ensure that the City has strong, comprehensive, and compatible tools to guide development decisions.

South El Monte *Emergency Operations Manual*

The South El Monte *Emergency Operations Manual* was developed to address the City's planned response to extraordinary emergencies such as natural disasters, technological incidents, and nuclear defense operations. Developed as a preparedness document, the purpose of the operations manual is to ensure appropriate response to a variety of emergency situations. The City's *Emergency Operations Manual* is part of a statewide emergency management system. The plan includes operational concepts, identifies management organization, and describes responsibilities in the event of an emergency. The plan is categorized by phases in which to operate before, during, and after an emergency.

An emergency plan is essential to a community for implementing emergency response. The plan is most effective when it is well publicized and easily understood by the community.

Seismic Hazards Mapping Act

The Seismic Hazards Mapping Act of 1990 requires the State Geologist to compile maps identifying and describing seismic hazard zones throughout California. Guidelines prepared by the State Mining and Geology Board identify the responsibilities of State and local agencies in the review of development within seismic hazard zones. Development on a site that has been designated as a seismic hazard zone requires a geotechnical report and local agency consideration of the policies and criteria established by the Mining and Geology Board (Public Resources Code Section 2690 et seq.).

FEMA Flood Insurance Program

The National Flood Insurance Act includes provisions for the National Flood Insurance Program. Participating jurisdictions must exercise land use controls and purchase flood insurance as a prerequisite for receiving funds to purchase or build a structure in a flood hazard area. The opportunity exists for the City to participate in the National Flood Insurance Program (NFIP) through the Federal Emergency Management Agency (FEMA). The NFIP provides federal flood insurance subsidies and federally financed loans for eligible property owners in flood-prone areas.

The City is rated as being within a "No Special Flood Hazard Area." Should this rating change at any time, NFIP benefits would be available to South El Monte.

Mutual Aid Agreements

The statewide mutual aid system was designed to ensure that adequate resources, facilities, and other support are provided to jurisdictions whenever their own resources prove to be inadequate to cope with a given situation. The statewide system is divided into six regions. South El Monte lies within Mutual Aid Region One, which includes Los Angeles and Orange Counties. The City maintains mutual aid agreements that require:

- Developing and maintaining current emergency plans which are compatible with the California Emergency Plan and the California Master Mutual Aid Agreement, and are designed to apply local resources in meeting the emergency requirements of the immediate community or its neighbors, and coordinate such plans with those neighboring jurisdiction's to ensure mutual compatibility.

- Maintaining liaison with the appropriate Office of Emergency Services (OES) Mutual Aid Region Office and neighboring jurisdictions.

- Responding to requests for mutual aid.

- Dispatching situation reports to the appropriate Operational Area Coordinator and/or OES Mutual Aid Region as the emergency situation develops and as changes in the emergency situation dictate.

- Requesting assistance from neighboring jurisdictions, and/or the Operational Area, as necessary and feasible.

- Receiving and employing resources as may be provided by neighboring jurisdictions and state, federal, and private agencies.

- Carrying out emergency regulations issued by the Governor.

California Environmental Quality Act Law and Guidelines (CEQA)

The California Environmental Quality Act, or CEQA, requires a thorough analysis of potential environmental consequences resulting from a development project or from a plan that guides future development. CEQA provides a means by which City officials and the general public can identify the potential impacts a project will have on the community, and to allow for mitigation or avoidance of such impacts.

California Noise Insulation Standards (Title 24)

In 1974 the California Commission on Housing and Community Development adopted noise insulation standards for residential buildings (Title 24, Part 2, California Code of Regulations). Title 24 establishes standards for interior room noise (attributable to outside noise sources) and also specifies that acoustical studies must be prepared whenever a residential building or structure is proposed to be located within exterior CNEL (or L_{dn}) contours of 60 dB or greater attributable to an existing or adopted

freeway, expressway, parkway, major street, thoroughfare, rail line, rapid transit line, or industrial noise source. The acoustical analysis must show that the building has been designed to limit intruding noise to an interior CNEL (or L_{dn}) of 45 dB.

Summary of Issues

Geologic and Seismic Hazards

Geologic and seismic issues relevant to South El Monte include the following:

- Proximity of earthquake faults relative to important emergency facilities in South El Monte. The Whittier Heights Fault passes close to South El Monte City Hall, the Greater El Monte Community Hospital, and the fire station.
- The durability of structures, given the threat of earthquakes from local and regional faults. Unreinforced structures built prior to 1974 are particularly susceptible to earthquake damage and present potential hazards to persons.
- Subsurface soil conditions in association with shallow groundwater. Groundwater depths in many areas of the City range from 15 to 35 feet below the surface. In the event of an earthquake, such conditions can cause soils to "liquefy" and loose structure, posing hazards to buildings lacking appropriate footings and foundations. State seismic hazards maps identify South El Monte as lying entirely within a liquefaction hazard zone. Excavations for large projects may encounter groundwater and possibly will require liquefaction studies and appropriate remediation.

Flood Hazards

The following issues are important for protecting the community from flood damage resulting from storms and potential dam failure:

- The location and level of flood zones. The area immediately south of State Route 60 (Pomona Freeway) is susceptible to flooding during major storm events. Also, ponding on certain local streets occurs during heavy rainfalls.
- South El Monte lies within the inundation area for the Santa Fe and Puddingstone Dams. While the City has no control over these facilities, appropriate disaster planning and advocacy efforts work to minimize hazards.

Urban Noise and Land Use Planning

Noise in the urban environment can affect the quality of life for residents. South El Monte is subjected to typical urban noises such as noise generated by traffic, heavy machinery, and day-to-day outdoor activities. Noise caused by aircraft flying in and out of El Monte Airport does not affect the community and is not a concern. Important noise considerations include:

Greater El Monte Community Hospital: a welcome local resource

- As the population increases in and around the City, traffic volumes will increase and present potential noise problems along primary travel routes such as Rosemead Boulevard, Garvey Avenue, Peck Road, and Durfee Avenue.
- Noise levels from traffic on the Pomona Freeway will impact adjacent residential neighborhoods.
- Noise created from temporary activities such as construction and gardening can impact adjacent properties.
- Industrial and commercial activities that use heavy machinery may create excessive noise levels. Of particular concern are impacts on residential uses located within industrial areas of South El Monte.

Fire Hazards And Hazardous Materials

Urban fire hazards arise from the presence of businesses that use, store, or manufacture flammable and/or explosive materials. Persons living in homes located within and adjacent to industrial zones may be exposed to such hazards.

Emergency Preparedness

Recognizing the hazards that pose risks to life and property represents the first step toward planning appropriate emergency response. Emergency preparedness planning must also consider:

- The need to address both natural and human-induced disaster response.
- Appropriate fire-fighting and protection services to address urban fire hazards, coupled with adequate infrastructure and access.
- The presence of housing in industrial zones.

- The location of emergency response facilities relative to hazard zones, transportation routes, and the population being served.

Crime Prevention

The following crime prevention issues are important for ensuring public safety:

- Using defensible designs for new construction and redevelopment in the City, to work in tandem with law enforcement efforts.

GEOLOGIC AND SEISMIC HAZARDS

Geologic and seismic activity have the potential to create widespread personal injury and property damage. South El Monte is affected by several seismic and geologic hazards at both the regional and local levels. High-intensity ground shaking (earthquake-induced strong ground motion), ground failure (liquefaction and shallow groundwater, and dynamic compaction and consolidation), and seismically induced surface rupture (fault rupture) represent the primary hazards.

At the local level, ground surface fault rupture could occur along the Whittier Heights fault, a splay of which has been mapped through South El Monte as a buried fault. Figure PS-1 identifies the fault trace beneath the interchange of the Pomona and San Gabriel River freeways, passing northwest to about Tyler Street. Geological evidence suggests that the fault is sufficiently buried so as not to represent a risk of ground surface rupture in the event of an earthquake. The primary associated hazard is ground shaking. Ground shaking, depending on its severity and duration, in a worst case situation can cause buildings to wholly or partially collapse.

An important consideration regarding the Whittier Heights fault is the fact that the fault passes near City Hall and the Greater El Monte Community Hospital. These critical facilities must remain functional during any type of disaster. This condition is discussed below under *Emergency Preparedness*.

The regional faults that would have the most adverse ground shaking effects on the City are the Whittier-North Elsinore Fault, the Elysian Park fault system, the Sierra Madre-San Fernando fault zone, and the San Andreas fault zone (Mojave segment) (Figure PS-2).

The effect of an earthquake originating along any given fault will depend upon its distance from South El Monte and the size earthquake that the fault is likely to generate. The largest estimated (credible) earthquake along the Whittier-North Elsinore Fault, the closest known active fault, is estimated to be 7.5 on the Richter Scale. Of the known active faults within a 62-mile radius of South El Monte, the San Andreas Fault is expected to have the greatest magnitude (8.3 Richter scale). However, because of its distance from the City, the intensity of ground shaking expected to be felt in South El Monte from an earthquake on the San Andreas is less than the intensity of an earthquake of lower magnitude along a fault located closer to the City.

Other effects directly related to ground shaking include pipeline rupture, street cracking, and objects falling within homes and businesses. Secondary effects that can result from ground shaking are ground subsidence, liquefaction, ground buckling, and dam failure. In South El Monte, seismic-related issues to account for in land use planning are liquefaction, pipeline rupture, and inundation due to dam failure.

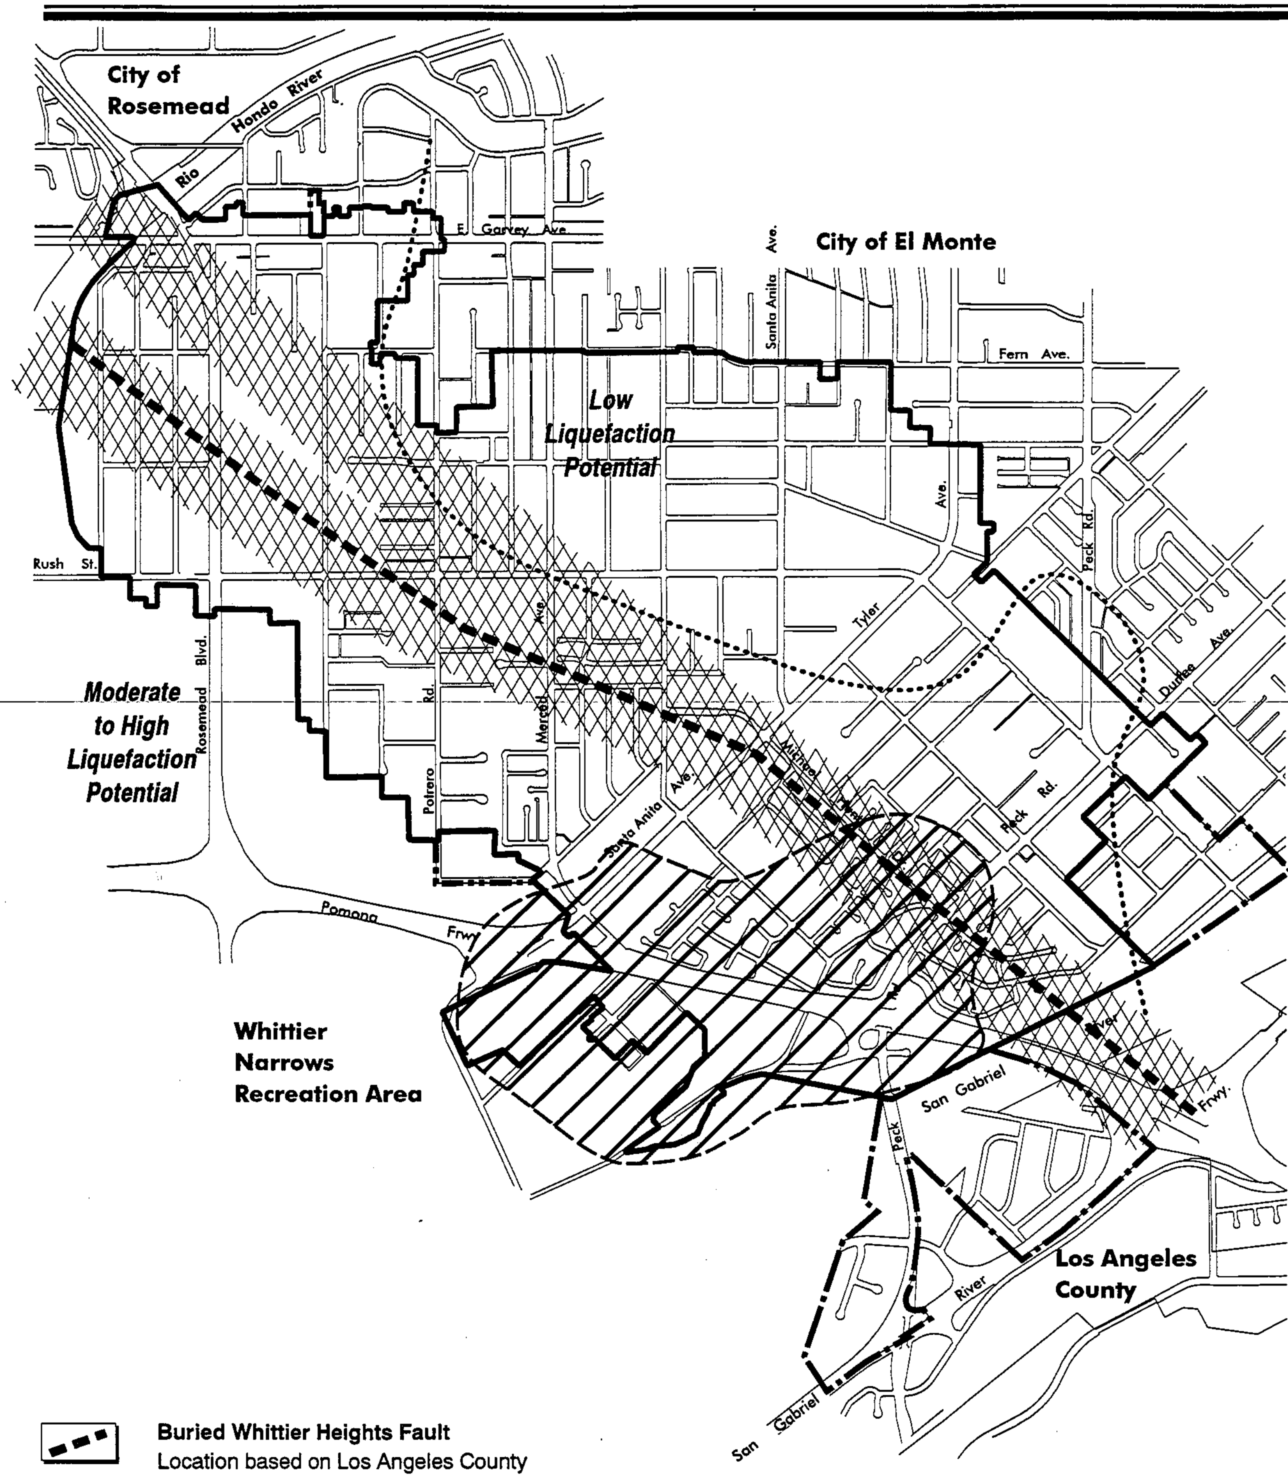
As described in the *Summary of Issues* section of this element, liquefaction represents a condition whereby a combination of high groundwater and loose soils causes soils to

lose cohesion, or "liquefy," when subject to intense shaking. Buildings located on such soils can collapse if they lack appropriate footings and foundations. The entire City of South El Monte is located within a liquefaction zone.

A 30-inch diameter high pressure gas pipeline extends along Fern Street-Elliot Avenue, passing through the City in an east-west direction. A 16-inch diameter high pressure line parallels Tyler Avenue north of Weaver Avenue. If the lines were to rupture in the event of an earthquake, a fire might result. The use of Tyler and Rosemead Avenues as evacuation routes could be affected.

Dam failure due to seismic activity has the potential to impact South El Monte and many communities in the San Gabriel Valley. The Santa Fe Dam in the San Gabriel Mountain foothills and Puddingstone Dam near San Dimas represent the two dams of concern. The U.S. Army Corps of Engineers flood emergency plan data indicate that failure of the Santa Fe Dam would result in the entire area of the City being flooded. Water depths would range from two to ten feet, with shallower depths in the northern portion and deeper in the southern portion of the City. Figure PS-3 indicates the potential extent and the depth of such flooding and the speed of flood water flows.

State law requires every reservoir owner to develop and maintain an emergency plan to be implemented if the dam is catastrophically breached. Each dam-specific emergency plan includes a map that shows the potential limits of a flood that could result if the dam should fail while filled to capacity. These flood maps are pictured as a worst-case scenario. Since most dams in Southern California are not normally filled to capacity, the possibility of inundation from either dam is remote.



Goal 1.0
Reduce the risk of danger related to natural hazards.

Policy 1.1
Establish an ordinance requiring the retrofit of unreinforced masonry buildings and the seismic reinforcement of buildings constructed prior to 1971 that are susceptible to damage in the event of an earthquake.

Policy 1.2
Require liquefaction studies to be prepared for new development proposed to be located in areas of the City with high susceptibility to liquefaction hazards.

Policy 1.3
Work with owners of high pressure gas lines to ensure that the lines are adequately safeguarded against rupture in the event of an earthquake.

Policy 1.4
Participate in regional programs to establish early warning systems that will alert residents and business people in the event of dam failure.

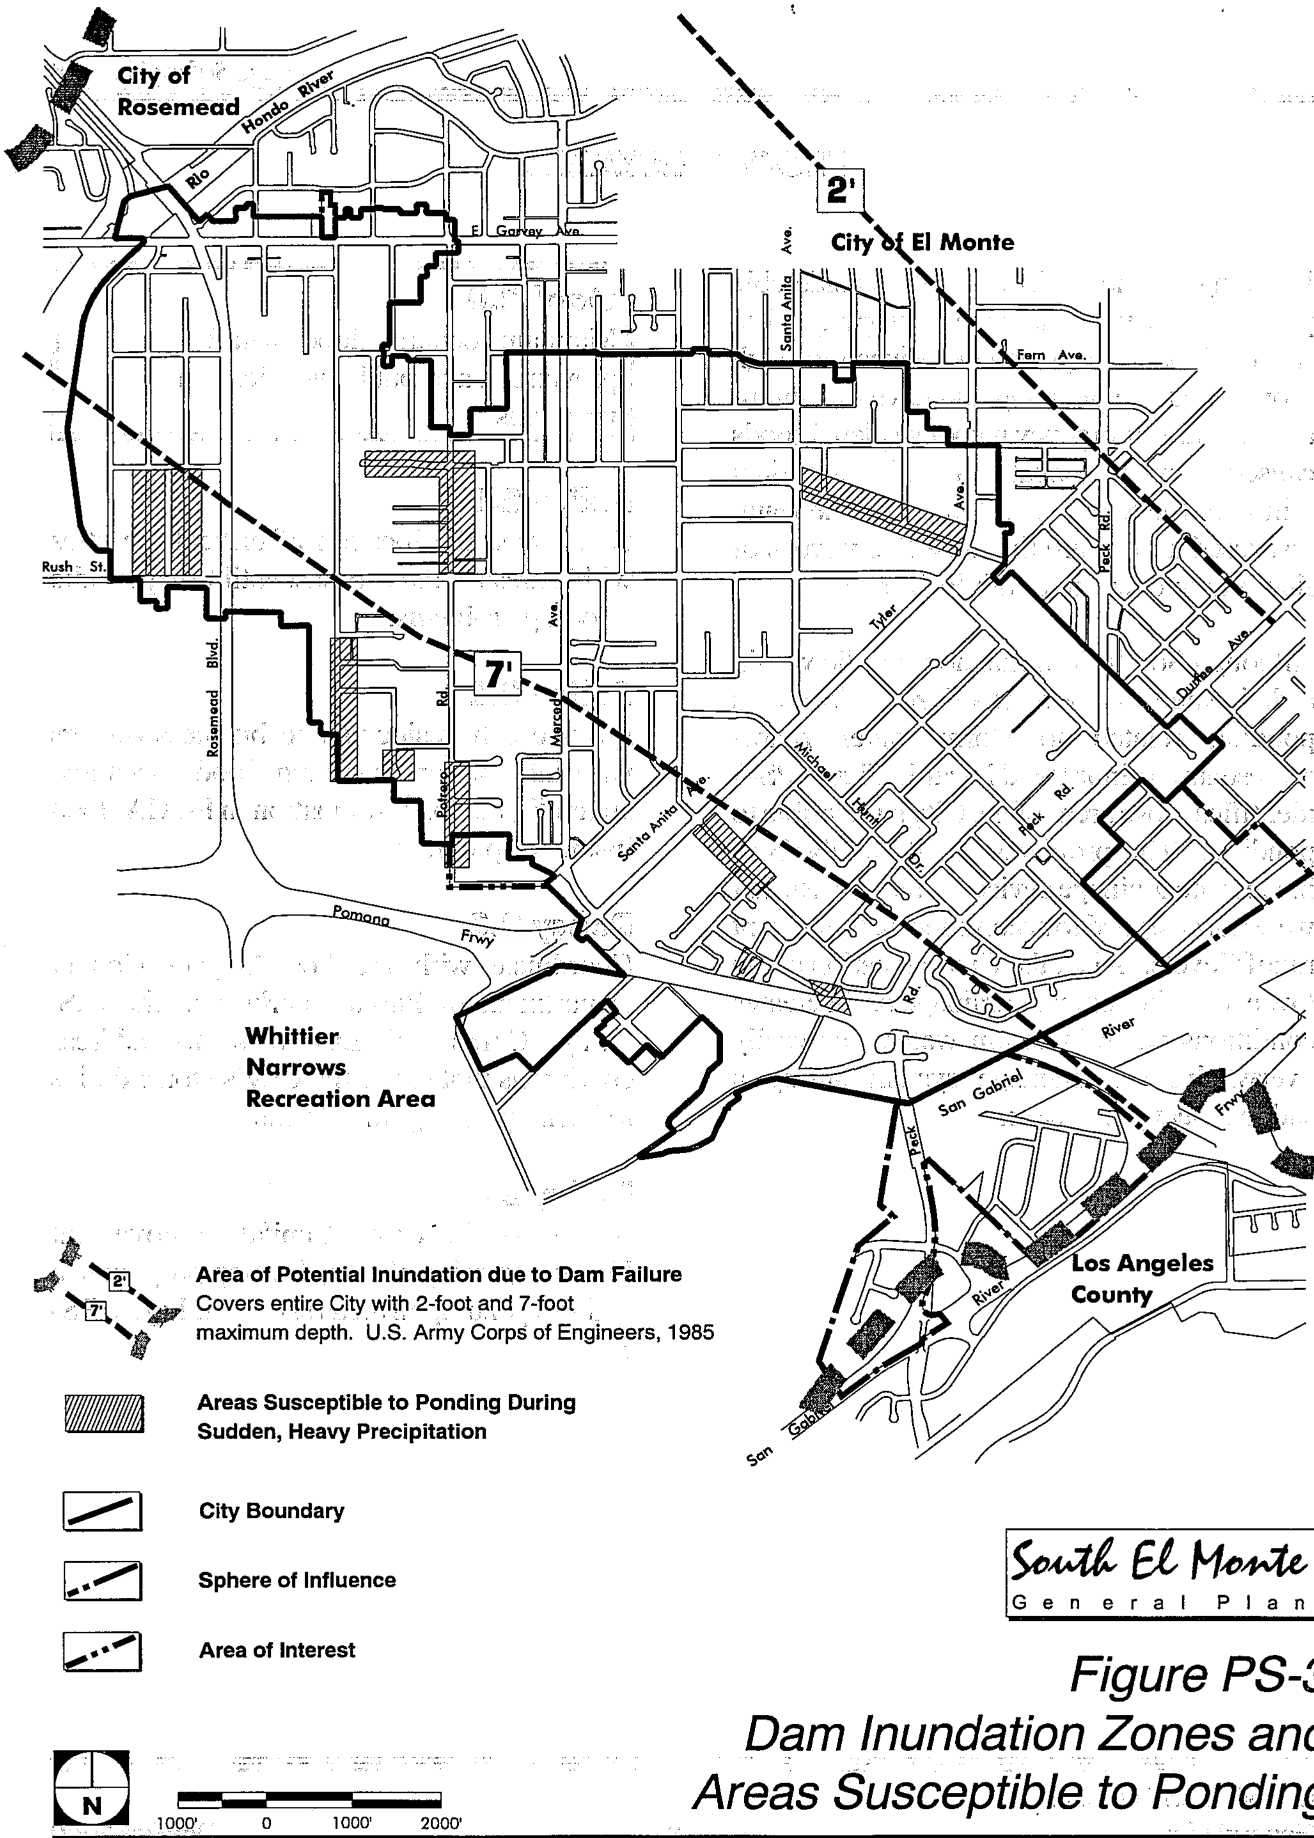
Regional Faults

FLOOD HAZARDS

Flooding has the ability to create considerable personal injury and damage to property. The risk of flood damage can be reduced through proper land use planning and development of an adequate emergency response plan. Floods caused by extreme weather conditions or dam failure of the Santa Fe or Puddingstone Dam, discussed above, are the most likely types of flooding to occur in South El Monte.

Although South El Monte does not lie within a delineated 100-year flood zone, localized ponding related to storm water runoff represents a minor flood hazard. Figure PS-3 identifies those areas of the City susceptible to ponding. The problems result largely from inadequate drainage devices and/or streets that were not designed to accommodate the current runoff levels. Also, the City's location at the low end of the regional drainage basin creates conditions whereby storm waters can easily overwhelm the drainage system during a sudden, heavy rain storm.



Goal 2.0
Maintain adequate flood hazard prevention and public notification programs.

Policy 2.1
Discourage the location of critical facilities within areas of the City susceptible to periodic flooding problems.

Policy 2.2
Provide City residents and business owners with information regarding flood zones and areas eligible for participation in FEMA flood insurance programs.

Policy 2.3
Coordinate with the Los Angeles County Department of Public Works and the U.S. Army Corps of Engineers to address conditions that cause the City's storm drains to back up during rain storms.

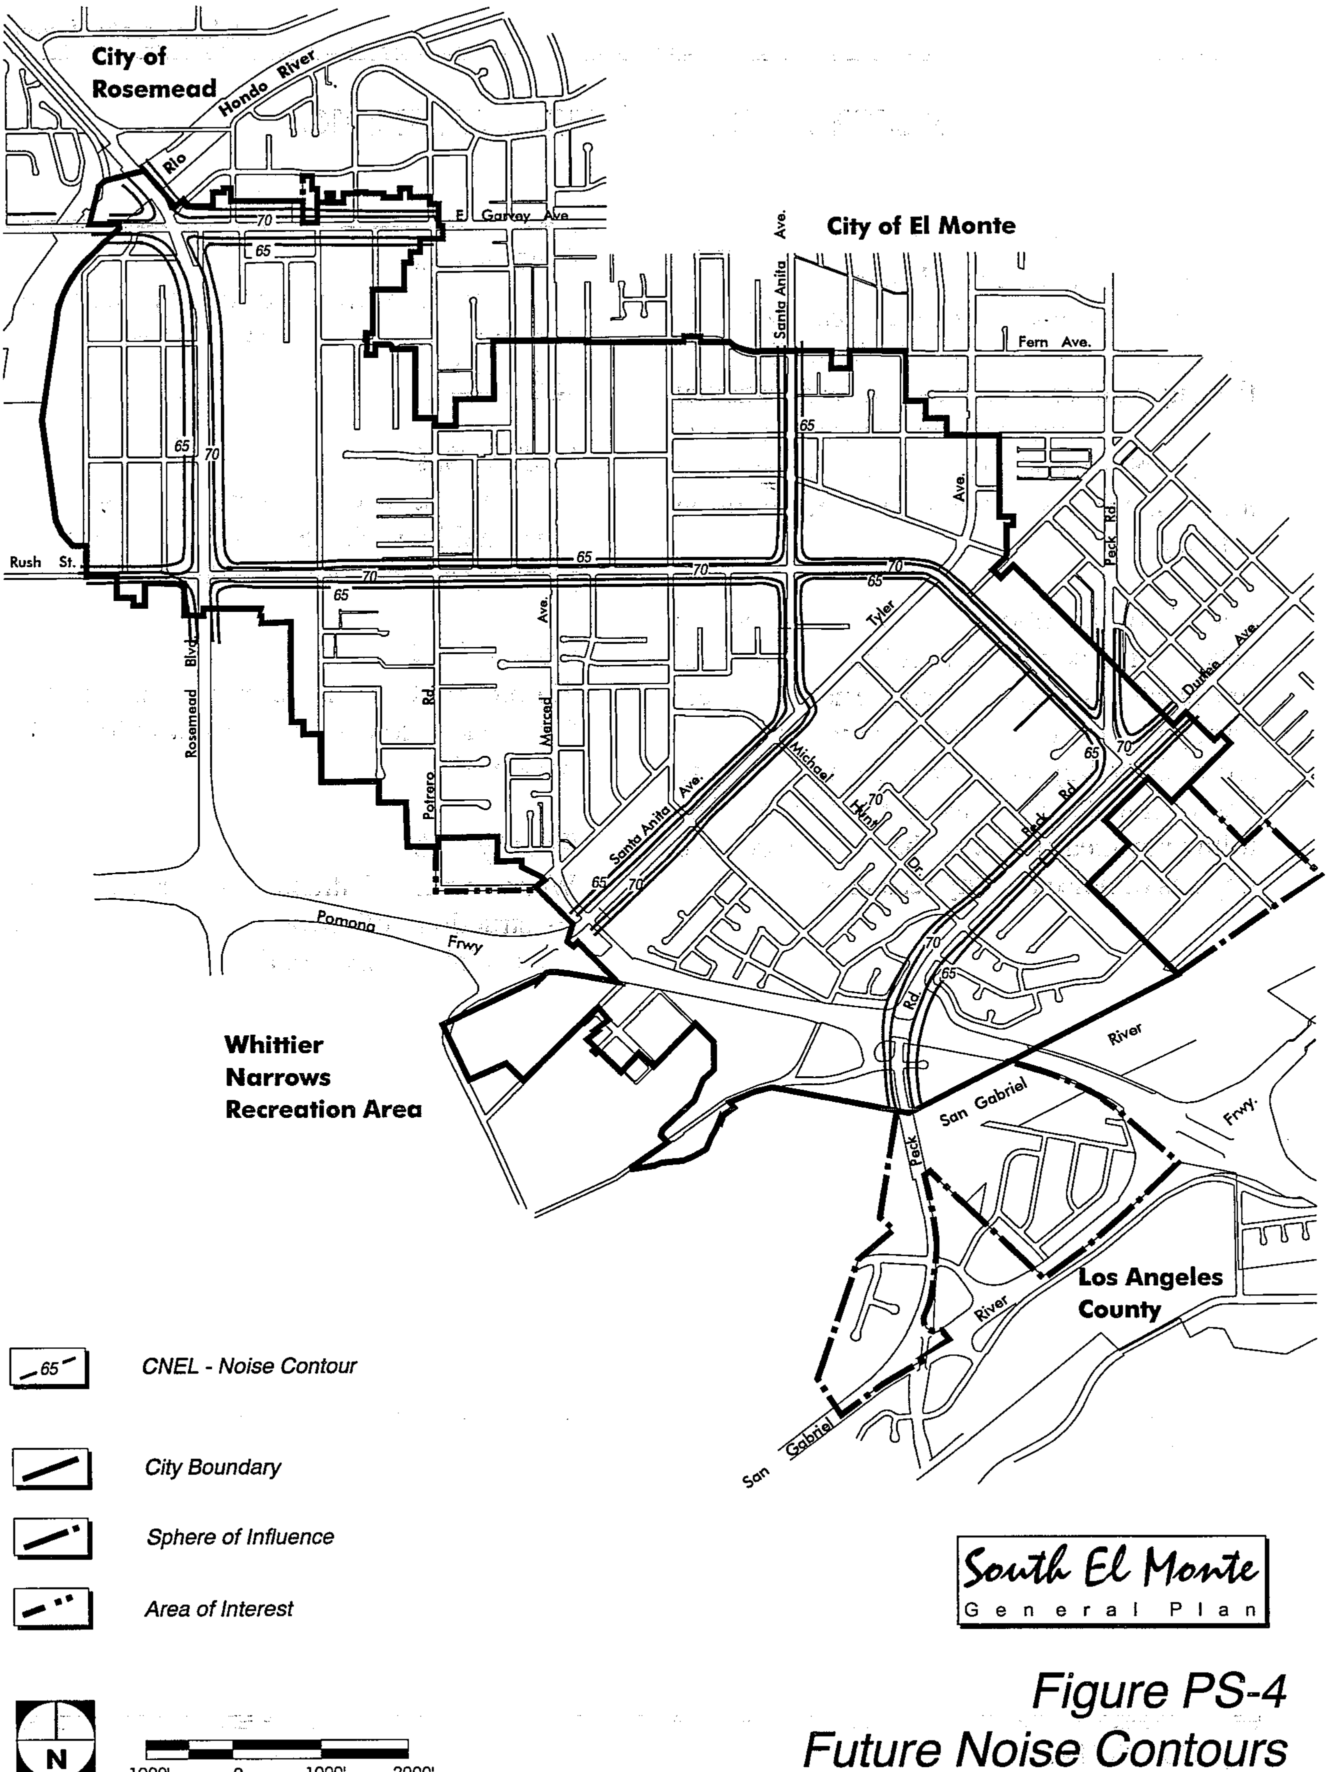
Policy 2.4
As part of the City's Capital Improvement Plan programing efforts, develop programs to address ponding in areas shown in Figure PS-3.

South El Monte
General Plan

Figure PS-3
Dam Inundation Zones and Areas Susceptible to Ponding

NOISE AND LAND USE PLANNING

Construction projects, industrial operations, property maintenance, and other activities that require the use of machinery can generate significant noise. Also, vehicle traffic along the City's street system can cause substantial noise intrusion into residential neighborhoods. Figure PS-4 identifies future projected noise levels that are expected to result from traffic activity.



Early consideration of the relationship between the sources and recipients of noise represents one way to minimize noise impacts throughout the community. Some areas that are already impacted by noise may require improvements to increase compatibility. The following measures will help to reduce the impacts of noise on City residents.

Goal 3.0
Minimize the adverse effects of excessive or unusual noise on the City's residential and business populations.

Policy 3.1
Use the noise/land use compatibility standards presented in Table PS-1 as a guide for future planning and development decisions.

Policy 3.2
Enforce the City's noise ordinance using both City code enforcement and law enforcement personnel.

Policy 3.3
Work with Caltrans to ensure timely construction of sound walls to protect residential neighborhoods from freeway noise.

South El Monte
General Plan

Figure PS-4
Future Noise Contours

Table PS-1
Noise/Land Use Compatibility Chart

Land Use Categories		Community Noise Equivalent Level (CNEL)						
Categories	Land Uses	<55	60	65	70	75	80>	
Residential	Single-Family, Duplex, Multiple Family, Mobile Homes	A	B	C	C	C	D	D
Mixed Use	Residential, Retail, and Service Commercial	A	B	B	C	C	C	D
Commercial	Hotel, Motel, Transient Lodging	A	A	B	B	C	C	D
Commercial	General Retail, Bank, Restaurant, Entertainment	A	A	A	B	B	B	C
Commercial Commercial Manufacturing Industrial Public Facilities	Professional Offices, Research and Development, City Hall	A	A	A	B	B	C	D
Commercial Commercial Manufacturing Industrial	Automobile Sales and Services, Manufacturing, Warehousing, Wholesale, Utilities	A	A	A	A	A	B	B
Public Facilities	Hospital, Church, Library, Schools	A	B	B	C	C	D	D
Parks	Parks	A	A	A	B	C	D	D

Zone A
Clearly Compatible
Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

Zone B
Normally Compatible
New construction or development should be undertaken only after detailed analysis of the noise reduction requirements are made and needed noise insulation features in the design are determined. Conventional construction with closed windows and fresh air supply systems or air conditioning, will normally suffice.

Zone C
Requires Analysis and Mitigation
Potential noise impacts exist. If new construction or development is proposed, a detailed analysis of noise reduction requirements must be made and needed noise insulation features included in the design.

Zone D
Clearly Incompatible
New construction or development should generally not be undertaken.

FIRE HAZARDS

The potential for fire hazards is increased when flammable and/or explosive materials are improperly stored, handled, or used. Fire protection, education, and awareness will help ensure the safety of the community. Adequate water supply and pressure also must be available to properly fight a fire.

In South El Monte, fire response and prevention services are provided by the Los Angeles County Fire Department. To provide appropriate service, the Department requires a minimum street width of 26 feet, as well as sufficient clearances around structures. Minimum safety standards for water supply, road width, access, and turning radius for fire vehicles are required to ensure public safety and to maintain an adequate level of fire protection.

Goal 4.0
Strive to maintain the following Insurance Service Organization (ISO) ratings citywide: rating of 3 for residential uses and rating 3 for commercial and industrial uses.

Policy 4.1
Review the City's contract with the Los Angeles County Fire Department annually to ensure that adequate fire protection services are provided.

Policy 4.2
Maintain programs that require the periodic inspection of businesses that use, store, or manufacture flammable and/or explosive materials.

Policy 4.3
Utilize the expertise of County Fire Department personnel to review development proposals where fire hazards are of concern.

HAZARDOUS MATERIALS

The California Health and Safety Code defines a hazardous material as any material that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant potential hazard to human health and safety, or to the environment if released into the work place or environment. Release of hazardous materials can occur during natural disasters, such as earthquakes. High temperatures can cause some materials to explode or ignite. Release can also occur from improper storage and handling. As an industrial community, South El Monte has a multitude of businesses that maintain hazardous materials on site.

While Federal, State, and local regulations work to provide safeguards, accidents can happen. A condition of particular concern in South El Monte is the presence of residential homes within and adjacent to industrial uses that may manufacture, use, transport, handle, or dispose of hazardous materials. Residents, as well as business owners and employees, are in danger of suffering the consequences associated with an adverse hazardous materials incident.

Goal 5.0
Protect the resident and business populations from potential hazards associated with the use, storage, manufacture, and transportation of toxic and hazardous materials in and through the City.

Policy 5.1
Work toward the gradual removal of nonconforming residential uses from industrial zones.

Policy 5.2
Cooperate with responsible Federal, State, and county agencies to reduce the risk from the use and transport of hazardous materials.

Policy 5.3
Continue to contract with Los Angeles County for services provided by the Hazardous Materials Response Team.

EMERGENCY PREPAREDNESS

Any type of natural or human-induced disaster has the potential to impact infrastructure important to emergency response. Proper planning to ensure access to critical facilities such as utilities, freeways, roadways, schools, and emergency care facilities can work to minimize loss of life and property damage whenever disasters occur.

The City's Emergency Operations Manual will require updating on a regular basis to ensure that all appropriate services, facilities, and staff are well prepared for disaster. This manual includes evacuation procedures, identifies responsible parties, and names resources to use in the event of emergency.

One identified resource is the Greater El Monte Community Hospital, located on Santa Anita Avenue. The hospital was constructed in 1974 under strict seismic codes. The hospital lies about 500 feet northeast of the buried Whittier Fault, which may present problems should an earthquake occur along that particular fault. Given this circumstance, routine earthquake preparedness training should be conducted for hospital staff.

City Hall, which serves as the Emergency Operations Center (EOC), also lies in close proximity to the Whittier Fault. As described under *Geologic and Seismic Hazards* above, surface fault rupture is not a concern, but City Hall could be subject to extensive shaking associated with an earthquake along the fault. Emergency planning dictates that the EOC remain functional during any type of disaster.

Preparation for emergencies is imperative to reduce the risks associated with emergency situations. Personal injury and property damage can be minimized through the following goals, policies, and preventative measures.

Goal 6.0
Develop procedures to deal effectively with the City's response to natural and human-induced emergencies.

Policy 6.1
Keep the City's Emergency Plan up to date and relevant to all types of disasters affecting the City.

Policy 6.2
Ensure that the City's Emergency Plan includes procedures to provide assistance to residents unable to leave their homes in the event of an order to evacuate.

Policy 6.3
Promote continued public awareness of emergency procedures for South El Monte residents, the business population, City staff, and public officials.

Policy 6.4
Establish a secondary or back-up local emergency operations center that can function in the event of damage to the City's primary emergency operations center.

CRIME PREVENTION

South El Monte contracts with the Los Angeles County Sheriff's Department for law enforcement services. The contract is reviewed periodically to ensure that the City is receiving the appropriate level of crime prevention and response service.

Crime prevention allows a city to take positive action toward creating safe environments for residents, as well as creating an inviting business community. Incorporating defensible space considerations into site planning and building design represents a pro-active approach to deterring crime.

Goal 7.0
Provide safe environments for City residents and businesses.

Policy 7.1
Continually assess the level of law enforcement and crime prevention services provided by the Los Angeles County Sheriff, and adjust levels as appropriate to meet the City's community safety goals.

Policy 7.2
Develop defensible space guidelines to be used in the review of development proposals.

Chapter 8.20 - NOISE REGULATIONS

Sections:

8.20.010 - Definitions.

For the purposes of this chapter, the words, terms and phrases set forth below shall have the meanings and construction therein given, except where used in a context which clearly indicates a different meaning or construction:

A. "A-weighted sound level" means the sound level in decibels as measured on a sound level meter using the A-weighted network. The level so read is designated db(A) or dbA.

B. "Ambient noise level" means the normal or existing level of environmental noise at a given location, not including the particular noise being measured or considered.

C. "Decibel" means a unit for measuring the amplitude of a sound, equal to twenty times the logarithm to the base ten of the ratio of the pressure of the sound measured to a reference pressure of twenty micropascals.

D. "Impulsive sound" means a sound of short duration, usually less than one second, with an abrupt onset and a rapid decay. Examples of sources of impulsive sound include explosions, drop forge impacts, and the discharge of firearms.

E. "Intrusive noise" means noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency and time of occurrence, and tonal or information content as well as the prevailing ambient noise level.

F. "Noise disturbance" means any sound which (i) endangers or injures the safety or health of human beings or animals, or (ii) annoys or disturbs reasonable persons of normal sensitivities, or (iii) endangers or injures personal or real property or (iv) violates the limits set forth in Section 8.20.020.

G. "Public property" means any property or structures owned or controlled by a governmental entity, including easements for road purposes.

H. "Real property boundary" means an imaginary line along the ground surface, and its vertical extension, which separates the real property owned by one party from that owned by another.

I. "Sound level meter" means an instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement of sound levels, which meets or exceeds the requirements for type S2A meters in American National Standards Institute (ANSI) specifications for sound level meters, SI.4-1971, or the most recent revision thereof.

J. "Vibration perception threshold" means the minimum ground or structure borne vibrational motion necessary to cause a normal person to be aware of the vibration by such direct means as, but not limited to, sensation by touch or visual observation of moving objects. A motion velocity 0.01 inches per second over the range of 1 to 100 hz shall create a rebuttable presumption that the vibration perception threshold has been met.

(Prior code §5-13-1)

8.20.020 - Exterior noise limits.

A. Maximum Permissible Sound Levels By Receiving Land Use.

1. No person shall operate or cause to be operated any source of sound at any location within the city or allow the creation of any noise on property owned, leased or occupied or otherwise controlled by such person, which causes the noise level when measured on any other property to exceed:
   a. The exterior noise limit for that land use or zone as specified in Table 1 or Table 2 for a cumulative period of more than thirty minutes in any hour; or
   b. The exterior noise limit for that land use or zone as specified in Table 1 or Table 2 plus 5 dbA for a cumulative period of more than fifteen minutes in any hour; or
   c. The exterior noise limit for that land use or zone as specified in Table 1 or Table 2 plus 10 dbA for a cumulative period of more than five minutes in any hour; or
   d. The exterior noise limit plus 15 dbA for a cumulative period of more than one minute in any hour; or
   e. The exterior noise limit for that land use or zone as specified in Table 1 or Table 2 plus 20 dbA for any period of time.
2. In the event the alleged offensive noise contains a steady , audible tone such as a whine, screech, or hum, or it is a repetitive noise such as a hammering or riveting, or contains music or speech conveying informational content, the exterior noise limits set forth in Tables 1 and 2 shall be reduced by 5 dbA.
3. If the measured ambient noise level exceeds that permissible within any of the first four noise limit categories above, the allowable noise limits set forth in Table 1 or 2 shall be adjusted in 5 dbA increments in each category as appropriate to encompass or reflect the ambient nose level. In the event the ambient noise level exceeds the fifth noise limit category, the exterior noise limit under the fifth category shall be increased to reflect the maximum ambient noise level.
4. Noise Measurement Procedure. The noise level shall be measured as a position or positions at any point on the receivers property utilizing the A~weighting scale of the sound level meter and the "slow" meter response for non-impulsive type noises and "fast" response for impulsive type sounds. When feasible, the microphone shall be located approximately four to five feet above the ground and ten feet or more from the nearest reflective surface. In those cases where the standard elevation is not feasible, the most closely approximate elevation possible shall be utilized. Calibration of the measurement equipment, utilizing an acoustical calibrator, shall be performed immediately prior to recording any noise data.

TABLE 1

EXTERIOR NOISE LIMITS BY ZONE

RECEIVING LAND ZONING CATEGORY	TIME PERIOD	NOISE LEVEL STANDARD (dbA)
One or Two Family Residential Zone	10 p.m.--7 a.m. 7 a.m.--10 p.m.	45 55
Multiple Dwelling Residential Zone, Public Zone	10 p.m.--7 a.m. 7 a.m.--10 p.m.	50 60
Commercial Zone or Commercial-Manufacturing Zone	10 p.m.--7 a.m. 7 a.m.--10 p.m.	55 60
Manufacturing Zone	Any time	70

TABLE 2

EXTERIOR NOISE LIMITS BY USE

RECEIVING LAND ZONING CATEGORY	TIME PERIOD	NOISE LEVEL STANDARD (dbA)
Property Partially or Entirely Developed for One or Two Family Residential Uses	10 p.m.--7 a.m.	45
Property Partially or Entirely Developed for Multi-Family Residential Uses	10 p.m.--7 a.m.	50

B. Vibration. No person shall operate or permit the operation of any device or machine that creates a vibration above the vibration perception threshold when measured at or beyond the property boundary of the source.

(Ord. 742 §1, 1985; prior code §5-13-2)

8.20.030 - Prohibited acts.

A. No person shall offer for sale, sell, or advertise by shouting or outcry within any residential or commercially developed portion of the city. The provisions of this section shall not be construed to prohibit the selling by outcry of merchandise, food and beverages at licensed sporting events, parades, fairs, circuses or other similar licensed public entertainment.

B. No person shall permit any animal owned or possessed by that person frequently or for extended

periods of time to make any sound or sounds which create a noise disturbance across a residential or commercial real property line.

C. No person shall load, unload, open, close or handle boxes, crates, containers, building materials, metal, equipment or other objects or personal property between the hours of ten p.m. and seven a.m. in such manner as to cause a noise disturbance across the real property line of an adjacent or nearby property developed entirely or partially for residential use.

D. No person shall operate or cause or authorize the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of ten p.m. and seven a.m., or at any time on weekends or holidays, such that the sound therefrom creates a noise disturbance across the real property line of an adjacent or nearby property developed entirely or partially for residential use.

E. No person shall sound or permit the sounding of any electronically amplified signal from any stationary bell, chime, siren, whistle, or similar device, for more than ten seconds in any hourly period. Houses of religious worship shall be exempt from this provision.

F. No person shall intentionally sound or authorize the sounding outdoors of any fire, burglar, or civil defense alarm, siren, whistle, or similar stationary emergency signaling device, except for emergency or testing purposes.

G. No person shall test a stationary emergency signaling device before seven a.m. or after seven p.m. nor test any such device for more than sixty seconds.

H. No person shall operate or permit the operation of any mechanically powered saw, sander, drill, grinder, lawn or garden tool, or any tool involved in any manufacturing process, so as to create a noise disturbance across a real property boundary line of property developed entirely or partially for residential use.

I. No person shall operate any motor, machinery or pump including, but not limited to, swimming pool equipment or any machinery involved in any manufacturing process, so as to create a noise disturbance across a real property boundary line of property developed entirely or partially for residential uses.

J. No person shall operate or permit the operation of any loudspeaker, musical instrument, motorized racing vehicle, or other source of sound in any place of public entertainment that exceeds 95 dbA as read on the slow response of a sound level meter at any point normally occupied by a customer, without a conspicuous and legible sign stating: "WARNING! SOUND LEVELS WITHIN MAY CAUSE HEARING IMPAIRMENT."

K. No person shall operate or permit the operation of any air conditioning or air handling equipment in such a manner as to exceed the following sound levels:

MEASUREMENT LOCATION	UNITS MFG. BEFORE 1-1-80 dbA	UNITS MFG. ON OR AFTER 1-1-80 dbA

Any point on neighboring property line, 5 feet above grade level, no closer than 3 feet to any wall	60	55
Center of neighboring patio, 5 feet above grade level, no closer than 3 feet to any wall	55	50
Outside the neighboring living area window nearest the equipment location, not more than 3 feet from the window opening, but at least 3 feet from any other surface	55	50

L. No person shall repair, rebuild, modify or test any motor vehicle, motorboat or aircraft in such a manner as to create a noise disturbance across a residential real property line. Nothing in this section shall be

construed to prohibit the movement of aircraft which are in all respects conducted in accordance with, or pursuant to, applicable federal laws or regulations.

M. No person shall operate or permit the operation of any motor vehicle with a gross vehicle weight rating (GVWR) in excess of ten thousand pounds, or any auxiliary equipment attached to such a vehicle, for a period longer than fifteen minutes in any hour while the vehicle is stationary, for reasons other than traffic congestion, on a public right-of-way or public space within one hundred fifty feet (forty-six meters) of a residentially developed property between the hours of ten p.m. and seven a.m.

(Ord. 757 §1, 1985; Ord. 742 §2, 1985; prior code §5-13-3)

8.20.040 - Special provisions.

A. Emergency Exemption. The provisions of this chapter shall not apply to:
   1. The emission of sound for the purpose of alerting persons to the existence of an emergency threatening life or property, or
   2. The emission of sound in the performance of work necessary to be performed immediately to prevent or correct any emergency threatening life or property.

B. Special Exemption. The provisions of this chapter shall not preclude the construction, operation, maintenance and repairs of equipment, apparatus or facilities of park and recreation departments, public works projects, or essential public services and facilities, including those of public utilities subject to the regulatory jurisdiction of the Public Utilities Commission.

C. Warning Devices. Warning devices necessary for the protection of public safety, including, but not limited to, police, fire and ambulance sirens, and train horns, shall be exempted from the provisions of this chapter when used for warning purposes.

D. Outdoor Activities. The provisions of this chapter shall not apply to occasional outdoor gatherings, public dances, shows and sporting and entertainment events, provided these events are conducted in compliance with all applicable ordinances, statutes, laws and regulations of all governmental agencies.

(Prior code §5-13-4)

OFFICE OF THE SHERIFF

COUNTY OF LOS ANGELES

HALL OF JUSTICE

ALEX VILLANUEVA, SHERIFF

February 18, 2021

Jasmine Osman, Project Planner
PLACEWORKS
3 MacArthur Place, Suite 1100,
Santa Ana, California 92707

Dear Ms. Osman:

REQUEST FOR SHERIFF'S DEPARTMENT SERVICE INFORMATION IN PREPARATION OF INITIAL STUDY/MITIGATED NEGATIVE DECLARATION STARLITE RESIDENTIAL DEVELOPMENT PROJECT

Thank you for inviting the Los Angeles County Sheriff's Department (Department) to provide information and responses to specific questions to be addressed under California Environmental Quality Act (CEQA) in preparing an Initial Study/Mitigated Negative Declaration (IS/MND), for the Starlite Residential Project (Project). The proposed Project is located on the approximate 11.5-acre former Starlite Drive-In Theater site at 2540 Rosemead Boulevard in the City of South El Monte. The proposed Project involves the development of 206 dwelling units (168 single family homes and 38 multi-family homes) of which maximum ten percent of these units would be affordable. Construction activities for the proposed Project would also include, but are not limited to, excavation and grading.

The proposed Project is located within the service area of the Department's Temple Sheriff's Station (Station). Accordingly, the Station reviewed your request and provided the attached responses (see correspondence dated February 18, 2021, from Captain Mark Reyes).

Should you have any questions regarding this matter, please contact me, at (323) 526-5657, or your staff may contact Ms. Rochelle Campomanes, at (323) 526-5614.

Sincerely,

ALEX VILLANUEVA, SHERIFF

Tracey Jue, Director
Facilities Planning Bureau

COUNTY OF LOS ANGELES

SHERIFF'S DEPARTMENT

"A Tradition of Service Since 1850"

DATE: February 18, 2021
FILE NO:

OFFICE CORRESPONDENCE

FROM: MARK A. REYES, CAPTAIN
TEMPLE STATION

TO: TRACEY JUE, DIRECTOR
FACILITIES PLANNING BUREAU

SUBJECT: RESPONSE TO REQUEST FOR SHERIFF'S DEPARTMENT SERVICE INFORMATION FOR THE PROPOSED STARLITE RESIDENTIAL DEVELOPMENT PROJECT

The Temple Sheriff Station (Station) is providing the following information as a response to a request received from PLACEWORKS, a company who is currently preparing an Initial Study/Mitigated Negative Declaration (IS/MND) for the proposed Starlite Residential Development Project (Project). The approximate 11.5-acre Project site was the former Starlite Drive-in Theater site located at 2540 Rosemead Boulevard in the City of South El Monte. The Project site is within the Station's service area. Upon release of the IS/MND for public review, the Department reserves the right to make modifications to the information should more specific Project details become available and/or circumstances change.

The proposed Project involves the development of 206 dwelling units (168 single family homes and 38 multi-family homes) of which a maximum ten percent of these units would be affordable. Construction activities for the proposed Project would also include, but are not limited to, excavation and grading.

The questionnaire below is formatted to correspond with the format of the request:

1. ***Please confirm the following Station responds to calls from the Project site:***
   a. ***The Los Angeles County Sheriff's Temple Station at 8838 Las Tunas Drive, Temple City, CA 91780***

   The Project site is within the Station's service area. The proposed Project is approximately 3.6 miles from the Station, located at 8838 Las Tunas Drive.

2. ***Please indicate the type of service calls or service demands anticipated by the proposed uses (residential).***

The Station typically receives service calls from the community to report crimes. These crimes are serious crimes which occur with regularity that include forcible rape, robberies, aggravated assaults, burglaries, larceny theft, grand theft autos, and arson.

The Station also enforces other law violations stemming from calls for service and/or observations, such as narcotics violations, vandalism, weapons laws, public disturbances, traffic accidents, vehicle code violations, parking enforcement, and other quality of life issues.

Additionally, the Station provides community services such as organized Neighborhood Watch meetings and youth outreach.

3. ***Given the existing level of staffing and equipment, with the police department be able to provide police services to the proposed Project? If not, please indicate what will be required to serve the Project.***

The Station is currently understaffed. However, assigning additional personnel to the Station to meet an acceptable service ratio will exacerbate due to the current shortage of facility space and supporting equipment. Any expansion of the Station, or construction of new facilities, should not only account for the current shortage, but should also accommodate additional personnel and equipment that will become necessary as our service area continues to experience growth and intensification of land uses.

Further information is required on the anticipated population generated by the new development to determine impacts on law enforcement services.

4. ***What impact will the proposed Project, in combination with all other projects planned in the area, have on the ability of the police department to provide police services in the area?***

The proposed Project will increase employees and resident population of the Station's service area, which will generate an increased demand for law enforcement services we provide. The Station expects the IS/MND to quantify the various population increases, describe potential impacts to our resources and operations, and identify measures that will mitigate these impacts to a level of insignificance.

5. ***What conditions will the police department require or recommend to reduce safety hazards and reduce potential impacts on police services?***

The Department recommends that the general principles of Crime Prevention Thru Environmental Design (CPTED) be implemented during the Project design phase. The goal of CPTED is to reduce opportunities for criminal activities by employing physical design features that discourage anti-social behavior, while encouraging the legitimate use of the site. The overall tenets of CPTED include defensible space, territoriality, surveillance, lighting, landscaping, and physical security. With advanced notice, Station personnel can be available to discuss CPTED with the Project developer.

The Station recommends that an analysis and impacts of the proposed Project to the local transportation and circulation system also be included in the IS/MND. Traffic levels at intersections must be identified, studied and analyzed. Preparation of a Construction Mitigation Plan would also help in reducing impacts to traffic levels. A Construction Traffic Management Plan should also be implemented as part of the proposed Project to address construction-related traffic congestion and emergency access issues. If temporary lane closures are necessary for the installation of utilities, emergency access should be maintained at all times. Flag persons and/or detours should also be provided as needed to ensure safe traffic operations, and construction signs should be posted to advise motorists of reduced construction zone speed limits.

6. ***Please add any comments you may wish to make regarding this matter.***

The Project Applicant will be required to pay all applicable required law enforcement mitigation fees associated with the Project.

Good morning Lt. Aguilera,

The Agency has some follow-up questions regarding Starlite Residential Development. Please see email below. It is more about contracts and funding for the law enforcement services. I've attached their EIR review request and our response letter for your use.

Please let me know if you have any comments or questions. Thank you very much.

Hello Rochelle,

I have some more questions about LASD's services, specifically funding and how the proposed project would contribute to funding.

- How are sheriff facilities and staffing funded?
- Does the City of South El Monte have a contract with LASD? Yes
    - If yes, how often is the contract updated? At least annually
    - How is the contract funded? Through the General Fund? Would the proposed project contribute to the General Fund through property taxes? Funded through the city of South El Monte
    - How would the proposed project pay into funding for the contract? Likely to the City of South El Monte

Thank you,

JASMINE A. OSMAN
Project Planner

---

Hi Rochelle,

The questions are:

- Can you please provide the officer per capita service standards that you use for planning purposes, so we can estimate the demand?

  The Department does not have a current standard law enforcement service ratio because staffing level needs vary from Station to Station due to criteria such as service call volume and type, patrol and travel time by priority, personnel workload and performance levels, and modeling the flow of calls for service ratio.

  The Station's desired law enforcement service ratio is 1 deputy for every 1,000 residents.

- How many officers currently staff the Temple Sheriff Station?

  The Station's service area encompasses approximately 66 square miles with an estimated resident population of 184,000 persons. The Station is currently staffed by 190 sworn personnel and 48 civilian employees.

- What is the existing equipment at the Station, and what are the specific needs for new equipment?

  The Station has existing patrol vehicles, dispatch equipment, and security cameras. By the end of this year, the Station expects to have their sworn

personnel receive body worn cameras. Currently, the proposed Project would not require any other new equipment except the items mentioned above.

Further information is required on the anticipated population generated by the new development to determine impacts on law enforcement services including equipment and personnel needs.

- What is the response time to the project site?

  The Station's average or anticipated response times for emergent, priority, and routine calls for service received from the proposed Project are 6, 20, and 60 minutes, respectively. (Please note these are approximate time ranges only and could be affected by traffic conditions and these response times are variable because the responding unit may be elsewhere within the Station's service area and not necessarily dispatched from the Station itself.)

- What is the Department's standard for desired response time for emergency and non-emergency calls?

  The Department generally adheres to the following, widely-accepted industry standard among law enforcement agency for responses categorized as emergent, priority, and routine calls for service: 10 minutes, 20 minutes, and 60 minutes, respectively.

Thank you,

JASMINE A. OSMAN

Good morning,

I have some follow up questions which I believe would be easier to email. Should I send my questions to you, or Tracey Jue? If Tracey Jue, could I please get her email address?

Thank you very much.

Sincerely,

JASMINE A. OSMAN

Subject: EIR - Starlite Residential Development (RFI)

Good morning Jasmine,

FPB received your request for the proposed Starlite Residential Development Police Questionnaire sent by the Station via email yesterday. The Station scanned the request and the mailing address have faded away. Please send me your mailing address.

We will try to send our review comments by your deadline this time. Please note that we typically require 30 days to review any environmental documents received by LASD.

Also, for future reference, the Department provides the following updated address and contact information for all requests for review comments, law enforcement service information, California Environmental Quality Act documents, and other related correspondence:

Tracey Jue, Director
Facilities Planning Bureau
Los Angeles County Sheriff's Department
211 West Temple Street
Los Angeles, California 90012

COUNTY OF LOS ANGELES FIRE DEPARTMENT
FIRE PREVENTION DIVISION

Land Development Unit
5823 Rickenbacker Road
Commerce, CA 90040
Telephone (323) 890-4243, Fax (323) 890-9783

PROJECT: VTTM 83399 - FLDU 2021005466 CITY: South El Monte

THE FIRE DEPARTMENT RECOMMENDS CLEARANCE OF THIS PROJECT TO PROCEED TO PUBLIC HEARING AS PRESENTLY SUBMITTED WITH THE FOLLOWING CONDITIONS OF APPROVAL.

FAILURE TO COMPLY WITH THE FINAL MAP SUBMITTAL AND REVIEW PRIOR TO RECORDATION, MAY RESULT IN THE BUILDING PLANS NOT BEING APPROVED DURING THE FIRE DEPARTMENT FIRE PREVENTION ENGINEERING SECTION BUILDING PLAN REVIEW.

FINAL MAP REQUIREMENTS

Access as noted on the Tentative and the Exhibit Maps shall comply with Title 21 (County of Los Angeles Subdivision Code) and Section 503 of the Title 32 (County of Los Angeles Fire Code), which requires an all-weather access surface to be clear to sky.

The Private Driveways proposed as private streets for access throughout the development shall be labeled as "Private Driveway" on the Final Map. The portion of the private driveway intended for fire apparatus access shall be identified as "Fire Lane" on the Final Map. All widths and dimensions shall be clearly delineated with a reciprocal access agreement is required for all private driveways. Compliance required prior to Final Map clearance.

Fire hydrant improvement plans shall be submitted to the Land Development unit for review and approval prior to the Final Map clearance.

Submit a complete gate detail prior to the Final Map clearance.

CONDITIONS OF APPROVAL – ACCESS

Verification for compliance will be performed during the architectural plan review prior to building permit issuance.

1. All on-site Fire Department vehicular access roads shall be labeled as "Private Driveway and Fire Lane" on the site plan along with the widths clearly depicted

on the plan. Labeling is necessary to assure the access availability for Fire Department use. The designation allows for appropriate signage prohibiting parking.

2. Fire Department vehicular access roads must be installed and maintained in a serviceable manner prior to and during the time of construction. Fire Code 501.4

3. All fire lanes shall be clear of all encroachments and shall be maintained in accordance with the Title 32, County of Los Angeles Fire Code.

5. The Fire Apparatus Access Roads and designated fire lanes shall be measured from flow line to flow line.

6. Attached Units: Provide a minimum unobstructed width of 26 feet, exclusive of shoulders, except for approved security gates in accordance with Section 503.6, and an unobstructed vertical clearance “clear to sky” Fire Department vehicular access to within 150 feet of all portions of the exterior walls of the first story of the building, as measured by an approved route around the exterior of the building. Fire Code 503.1.1 & 503.2.2

7. Detached Units: Provide a minimum unobstructed width of 20 feet, exclusive of shoulders, except for approved security gates in accordance with Section 503.6, and an unobstructed vertical clearance “clear to sky” Fire Department vehicular access to within 150 feet of all portions of the exterior walls of the first story of the building, as measured by an approved route around the exterior of the building. Fire Code 503.1.1 & 503.2.1.

7. A minimum 5-foot-wide approved firefighter access walkway leading from the fire department access road to all required openings in the building's exterior walls shall be provided for firefighting and rescue purposes. Fire Code 504.1

WATER SYSTEMS REQUIREMENTS

1. All fire hydrants shall measure 6”x 4"x 2-1/2" brass or bronze, conforming to current AWWA standard C503 or approved equal, and shall be installed in accordance with the 2017 County of Los Angeles Fire Code, Table B105.1 .

2. The required fire flow for the public fire hydrants for this project is 2000 gpm at 20 psi residual pressure for 2 hours. Two public fire hydrant(s) flowing simultaneously may be used to achieve the required fire flow. Fire Code 507.3 & Appendix B105.1

3. Install three (3) new public fire hydrants. (as shown on the map as proposed by the applicant).

4. Install eight (8) private-on site fire hydrants. (as shown on the map as proposed by the applicant)

5. All private on-site fire hydrants shall be installed a minimum of 25' feet from a structure or protected by a two (2) hour rated firewall. Exception: For fully sprinkled multi-family structures, on-site hydrants may be installed a minimum of 10 feet from the structure. Indicate compliance prior to project proceeding to the public hearing process. Fire Code Appendix C106.1

6. Plans showing underground piping for private on-site fire hydrants shall be submitted to the Sprinkler Plan Check Unit for review and approval prior to installation. Fire Code 901.2 & County of Los Angeles Fire Department Regulation 7

7. All required public fire hydrants shall be installed, tested and accepted prior to construction.

8. An approved automatic fire sprinkler system is required for the proposed buildings within this development. Submit design plans to the Fire Department Sprinkler Plan Check Unit for review and approval prior to installation.

Additional Fire Department requirements will be determined during the Building Plan Check Phase.

For any questions regarding the report, please contact FPEA Claudia Soiza at (323) 890-4243 or at Claudia.Soiza@fire.lacounty.gov
